Rosa: Beautiful and functional faucets by Akij Bathware

While exploring the market for bathroom and kitchen fittings for your ideal home, you will inadvertently come across products that will not only be costly but also not very functional at the end of the day. Chances are most of them will wear down easily, as most of the faucets that you will find in the market just do not meet the basic standards. To meet the growing demand for quality faucets, Akij Bathware has introduced Rosa faucets. The manufacturing process of this new line of products utilises impressive features, reminding all of the company motto — It's beyond beauty.

Rosa faucets are manufactured with 100 per cent virgin brass, the purest form of brass that is stronger, more durable, and eliminates chances of health hazard by removing the effect of poisoning lead. The

three-layer electroplating and PVD coating ensures that the faucet looks shiny while it acts against salty and iron-based water, chemical corrosion, and also reduce the chance of getting leakage in the faucet body.

Inside the faucets, world-class cartridges, made in Hungary, are used, which is an essential compound that regulates the cold and hot water flow with temperature, so say goodbye to poor water mixing! This is very important, especially in winter when the

demand for shower mixer faucets increases.

To top it all, another essential feature of the faucets, 'aerator' has been used, which comes from the leading US-based company Neoperl. This makes sure you get nice foamy water; so, you can just turn the faucet, relax and enjoy a relaxing shower to start your day.

A fully functioning faucet is of utmost importance as studies have shown even a minuscule leakage can waste over 3000 gallons of water in a year, which is equivalent to 180 showers! So, the next time you are shopping for quality faucets, look no further than Rosa faucets by Akij Bathware.
