that has no hope of escape.

# Is policy failure to blame for our wage inequality?

at Samarkand State University.

ARINDAM BANIK

The phenomenon of access to new can be observed in developed and developing economies alike. technology resulting in skills gaps and wage inequality is visible in Reportedly, the demand for skilled all economies; and so is the rising (as opposed to unskilled) labour has trend in poverty, particularly among increased relative to their supply. The the ageing population in developed concept of skilled labour can broadly economies. So, companies counter be divided into two groups: those this by hiring a skilled workforce assuming skill-biased technological from foreign countries. This issue change is exogenous and those is discernible in all age groups due thinking that adopting skill-biased or unskilled-based technologies is endogenous. The overwhelming majority of studies belong to the first group, who have argued that skillbiased technological change has played a central role in increasing inequality in recent times.

> High levels of inequality reduce growth in relatively poor countries but encourage growth in more affluent countries. Economist Robert Barro studied a broad panel of countries between 1960 and 1995

Overall, for poor countries, the escape from poverty becomes more difficult because rising per capita income induces more inequality, which retards growth in this range. Experts argue that such a decline may be due to the failure to create an ecosystem

per capita is less than \$2,000 (in 1985 dollars) and rises with inequality when income per capita is more than \$2,000. He concluded that incomeequalising policies might be justified to promote growth in poor countries. active income redistribution appears new technologies. The poor sector

and found that growth tends to fall Economist Simon Kuznets explained more inequality, which retards interest mainly because of the rising with greater inequality when income this in terms of a shift from the rural/ agricultural sector of the economy to the urban/industrial sector.

This type of relationship also emerges in Barro's analysis. However, the curve likely reflects not only the influence of the level of income per For more affluent countries, however, capita but also the effect of adopting are skill-biased because they use

growth in this range. Experts argue inequality in the relative wages of that such a decline may be due to skilled and unskilled labour. the failure to create an ecosystem for quality education.

entering the market through more unique products and processes skilled workers more intensively

Consider Bangladesh. It has a large workforce, but Bangladeshi Notably, most newer technologies employers often hire foreign nationals because they feel locals require more skills. Migrant workers from countries like India, Sri Lanka, and the Philippines can negotiate higher wages because their abilities are recognised. Anyone can see the absurdity in hiring thousands of experienced textile engineers at minimum wage to produce highquality products. The problem is not a shortage of professional textile engineers; the problem is that the country's economic decision-makers cannot understand growing demand. It is to be noted here that Bangladesh also has immense prospects as a role model for manufacturing. The fact is that foreign investors' friendly policies don't mean that one expects an unlimited supply of plant managers or well-trained technicians to line up at their door. Besides, they cannot access whatever labour they need at their chosen wages.

> It is often argued that capitalism generated extensive prosperity for centuries by rewarding the most productive uses of available work. As Adam Smith postulated in The Wealth of Nations, "...every individual naturally inclines to employ his capital in the manner in which it is likely to afford the greatest support to domestic industry, and to give revenue and employment to the greatest number of people of his own country...'

> Theoretically, technology and innovations are size-neutral. The blame is with policy entrepreneurs who created this size bias due to their jerry-built knowledge. Thus, wage inequality

for quality education.

a reduction in overall economic growth. Barro further showed that the overall relationship among income inequality, growth, and investment is weak. He investigated the effect of economic development on inequality and found that the traditional relationship here is the Kuznets curve, which describes an inverted U-shaped relationship decreases in economic development. rising per capita income induces has become an area of immense

benefits of greater inequality and the prosperous sector uses more have found that the relative supply advanced techniques. Technological of skilled workers concentrates innovations (including the factory system, electric power, computers, and the internet) tend to raise inequality when only a few people initially share in the relatively high incomes of the advanced sector. wages of skilled workers are expected Eventually, however, inequality falls to increase as new skill-biased as more people take advantage of technology is adopted, the wages new technology. Overall, for poor between inequality and growth: countries, the escape from poverty remain unaffected or even fall. The and poverty are the consequences inequality first increases and later becomes more difficult because issue of the supply of skilled labour of the awful human resources policy

to incur a trade-off between the uses old technologies, whereas than the older technology. Experts the adoption of new technology to a specific region—those having a higher supply of skilled labour are likely to be quicker in adopting new technology. Likewise, while the real of unskilled workers may either

## to the inaccessibility of technology As civil order crumbles in Myanmar, Bangladesh should be alert

drug smuggling inside Bangladesh. ARSA itself has been accused of enabling arms smuggling inside the camps in Bangladesh. A United Nations Office on Drugs and Crime (UNODC) report suggests that the production of methamphetamine and its use in the manufacturing of yaba has increased, especially in Myanmar, with Bangladesh

fleeing into Bangladesh for safety.

However, apart from providing for the Rohingya amidst difficult economic challenges facing the country, there is another, more sinister concern that Bangladesh must watch out for: national security. Elements like the Arakan Rohingya Salvation Army (ARSA)—a Rohingya insurgent group—have reportedly already infiltrated Bangladesh and have been behind killings and unrest in Bangladesh's Rohingya camps, including the assassination of prominent Rohingya leader Mohammad Mohib Ullah in 2021. In July 2023, it was reported that, since 2017, 188 individuals were killed in the camps, many of them by ARSA.

While gang violence, fuelled by turf wars, has resulted in many casualties and a deterioration of law and order inside vindictive ruling junta, and therefore Rohingya camps, some of these nefarious more. In 2020, Bangladesh's exports to

being targeted as one of the key markets. Given Myanmar's internal strife, there

is risk of criminal elements capitalising on the existing vulnerabilities of law and order in the country to accelerate and expand their network, especially beyond borders. In that case, caught at the heart of the Golden Triangle—one of the three major Asian drug trade routes-Bangladesh has to be more vigilant in its border pockets with Myanmar, especially around Teknaf (one of the prominent drug entry points).

Apart from these Bangladesh's trade interests in Myanmar are also being affected by the civil war. Bangladesh has sizeable bilateral trade engagements with Myanmar, exporting a variety of goods such as pharmaceuticals, vegetables, fish, construction materials, and importing rice, pulses, wood, and

A CLOSER LOOK actors are actively involved in arms and Myanmar stood at \$48.4 million, while Myanmar's exports to Bangladesh stood at \$64.1 million. However, trade volume between the two countries has already plummeted, with Bangladesh taking a hit. Due to a trade halt at Teknaf land port since November 14 last year, the Bangladesh government is losing about Tk 3 crore each day in revenue.

> With the Arakan Army now taking over areas bordering Bangladesh, there is a possibility of violence escalating in those regions, leaving us with no option but to enhance vigilance in these areas. In the past, this led to diplomatic tensions between the two sides, especially in September 2022, with six mortar shells from Myanmar exploding in Bandarban's Ghumdum border area resulting in one casualty. Myanmar said it had launched the strikes after the AA captured a police outpost in Maungdaw Township in northern Rakhine State.

> The civil war in Myanmar is also a pain point for neighbouring India and China. The Three Brotherhood Alliance already claims to have taken over the Shan State and several towns that contain critical trade routes with China. In fact, on January 4, a mortar shell from Myanmar fell inside China, causing several injuries there. Meanwhile, the ongoing unrest in India's Manipur between the Meitei and Kuki communities (which resulted in the death of at least 175 people as of September 2023) has also partially been attributed to the Kuki's migrating to Manipur from Myanmar, with old fault lines reappearing.

> If Myanmar's civil war continues on its current course, there could be ripple effects on Bangladesh and other neighbouring countries.

> It is commendable that China has taken a proactive approach to get the warring parties to a ceasefire—albeit temporarily. But the Myanmar military junta cannot be trusted, as they have been accused by rebel groups of breaching the ceasefire conditions, resulting in the resumption of conflict.

> It is high time all parties with influence realise that the military junta in Myanmar is rogue and incapable of ruling the country. They must be influenced to step down and pave the way for the return of democracy in the country, which is what the majority in Myanmar desire and deserve.
