Polls could be held in mid-February

Sufficient progress in reforms, trials necessary before election, Yunus tells Tarique in London

STAFF CORRESPONDENT

Chief Adviser Prof Muhammad Yunus has said that the next general election could be held in the week before the start of Ramadan in 2026 if all preparations are completed.

He added that sufficient progress in reforms and the trials of perpetrators of killings in the July uprising would be necessary to bring the election date forward from April.

Yunus made the remarks when BNP acting chairman Tarique Rahman, during a meeting with the chief adviser in London yesterday, suggested that the election take place before Ramadan.

The month of fasting will begin in the third week of February. After the end of Ramadan, Eid and Independence Day will be celebrated in March.

It's time to strengthen national unity and move swiftly toward a fair election in mid-February.

Mirza Fakhrul Islam Alamgir

Parties welcome possibility of February polls

NCP says reforms, trials must before polls

STAFF CORRESPONDENT

This is a significant shift in both sides' stance on election timing. The BNP, citing the urgency of returning to democracy, continued to demand that the election be held by December after the chief adviser announced polls in April earlier this month.

The government and the BNP revealed the outcome of the meeting between Yunus and Tarique in a joint statement presented at a press conference in London.

The party's Chairperson Khaleda Zia also believes that it would be good to hold the election during that time, according to the statement read out by National Security Adviser Khalilur Rahman.

The chief adviser said he has already announced that the election will be held in the

“

This operation will continue for as many days as it takes to remove this threat.

BENJAMIN NETANYAHU

AGENCIES

Israel launched renewed attacks on Iran as evening fell yesterday, after its biggest ever attack against its longstanding foe blasted Iran's huge underground nuclear site and wiped out its entire top echelon of military commanders.

Iran said that in retaliation, “the gates of hell will open”, while Israel said the strikes were only the start of “Operation Rising Lion”. US President Donald Trump said it was not too late for Tehran to halt the bombing campaign by reaching a deal on its nuclear programme.

- Some 200 Israeli fighter jets hit over 100 targets in Iran
- Trump urges Iran to grab ‘second chance’ for a deal
- China, Russia slam strikes; world urges restraint
- Report says US moving military assets to Middle East

Iran's Nournews said 78 people had been killed and 329 injured in Israeli attacks on residential areas in Tehran.

As evening fell yesterday, Iranian media reported explosions on the northern and southern outskirts of Tehran and at Fordow, near the holy city of Qom, a second major nuclear site which had been spared in the first wave of attacks. Israel's military said it was striking Iranian missile and drone launching sites.

Air defences were activated across Tehran, and explosions could be heard in Isfahan.

SEE PAGE 2 COL 1

Iran's options for retaliation are limited
Say analysts

AGENCIES

Israel's strikes on archaic Iran exposed severe weaknesses for Tehran that have hampered its ability to respond militarily, analysts said.

Israel said it hit 100 targets, including Iranian nuclear and military sites in the attacks, killing senior figures, among them the armed forces' chief and top nuclear scientists.

Supreme leader Ayatollah Ali Khamenei warned Israel it faces a “bitter and painful” fate over the attacks, but analysts say the Islamic republic's options are limited.

“This is an intelligence defeat of existential proportions for the Islamic Republic,” said Ali Fathollah-Nejad, director of the Berlin-based Center for Middle East and Global Order (CMEG) think tank.

“It exposes the vital vulnerability of the regime's military and security apparatus and its key infrastructures

Two die from Covid in 24hrs 15 new cases detected

STAFF CORRESPONDENT

Two women died from Covid-19 and 15 new cases of the disease were reported in the 24 hours preceding 8:00am yesterday, according to the health directorate.

One of the women died in Dhaka and the other in Chattogram, according to the health emergency operations centre and control room of the Directorate General of Health Services.

After a long gap, a coronavirus fatality was reported on June 5 this year.

With the latest fatalities and cases, the country's recorded death toll from the disease since March 18, 2020, stands at 29,502 and cases at 20,51800.

The recovery and death rates remained at 98.42 percent and 1.44 percent, respectively.

Amid rising numbers of cases in Bangladesh and neighbouring countries, the government is resuming coronavirus testing at four major hospitals in Dhaka and Chattogram from today.

The facilities are Dhaka Medical College Hospital, Shaheed Suhrawardy Medical College Hospital, Mugda Medical College Hospital, Kurmitola General Hospital, and the DNCC Dedicated Covid-19 Hospital in the capital; and Chattogram Medical College Hospital in the port city.

AIR INDIA PLANE CRASH Search on for missing people, clues

One of two black boxes found

REUTERS, Ahmedabad

Rescuers searched for missing people and aircraft debris in charred buildings in Ahmedabad yesterday after more than 260 people were killed in an Air India Boeing 787 crash, and local media reported that India may ground the airline's 787 fleet for safety checks.

The Boeing 787-8 Dreamliner with 242 people on board bound for Gatwick Airport south of London came down over a residential area of Ahmedabad moments after take-off and erupted in a huge fireball as it hit buildings below, CCTV footage showed.

Rescue workers had completed combing the crash site and were now searching for missing people and bodies in the buildings as well as for aircraft parts that could help explain why the plane crashed soon after taking off.

There was a strong stench of jet fuel in the air as cranes worked to remove chunks of burnt trees on the ground and a sniffer dog went through the debris.

Telltale signs that you have entered Dhaka city

ASHIF AHMED RUDRO

The holidays are almost over! By tomorrow, the city will revert to its default setting, a busy Dhaka with busy people. Most of the dwellers are either headed towards the capital or will be starting for the metropolis soon. This brings an interesting question to mind: When do you feel like you are in Dhaka?

It can be subjective and the entry points are not the ultimate decider of this feeling. Sometimes you get the vibe long before you enter the place. For some people, it's the presence of factories and skyscrapers that indicates the emergence of Dhaka; for others, it's the people they travel with!

"Do you ever get those fellow travellers who get on the bus with a

bunch of ducks, four kids, and way too many bags for any single person to manage? Well, they always get off at the suburbs and as soon as this happens, I know Dhaka is near," said Shahed Hasan, an engineer who lives in Basabo. "That and the usual traffic jam are usually my indicators for where Dhaka starts," he adds with a smile.

The melodious call that goes "Oi Gulistan-Sadarghat-Gulistan" is an unmistakable one that might as well be an anthem. It's not that Gulistan and Sadarghat are what define Dhaka, rather it's the way these calls for passengers are made and the way the bus conductors basically push you into their dilapidated buses.

"I remember coming to Dhaka on a train ten years ago. As I got down to

the station, it was quite an experience full of fear and awe. As I walked along the station to the end of the platform, I found that there was nothing there. I had simply walked in the opposite direction! I know it's silly, but I was new and scared to ask anyone. Since then, Dhaka comes to my mind with a view of the dome umbrella of Kamalapur Station," shared one Meraz Ahmed from Mirpur who prefers bus rides these days.

There's no denying that many people associate the metropolis with the iconic image of Kamalapur Station. No wonder back in the day, movies would pan out the camera to show the railway station to indicate that our hero, who will most certainly become a rich man by selling chanachur, has arrived in the city.

If you are flying to Dhaka, you may get some of the "vibes" even before landing – when the commotion starts. However, you will not get the true taste until you are out of the airport and struggling to find a car to get to your destination in the capital.

For newcomers, the "Dhaka feeling" comes in phases. First, it's curiosity as they pass through the outer points of the city. The commotion and traffic will surely pique their interest. Then comes fear when it's time to get off their bus or train. Then comes awe for those visiting the capital for the first time, irrespective of who they are.

Dhaka may not welcome you with a song like "Welcome to New York", but it does shelter you and give you stories that you will never forget.

Parties welcome possibility of February polls

FROM PAGE 1

frustrating," reads the statement.

If the election is held before a July Charter and clear roadmap to trial for the atrocities committed during the mass uprising, then the polls will reduce the uprising to a mere power transition and suppress people's desire for rebuilding the state.

"If the government announces an election date before fulfilling these demands, the people will not accept it," it adds.

The NCP urged the government to reach consensus on reform issues through discussions with political parties, and to formulate and implement the July Charter.

Jamaat Assistant Secretary General Ahsanul Mahboob Zubair told The Daily Star that the election should only be held after the adoption of the July Charter, the implementation of reforms, and the trial of those responsible for the killings during the July uprising.

"Moving towards the election will not be possible without fulfilling these conditions," he said.

The Jamaat believes that the necessary reforms must be done before the election, he added.

The party had earlier stated that it did not see any problem if the election were held two or three months earlier as long as the goals of reforms and trials had been achieved.

"Necessary reforms are more important than the date or month of the election. If the reforms are not carried out, we will be heading back towards fascism. And there must be justice," said the party.

Israel launches biggest ever attack on Iran

FROM PAGE 1

Israeli Prime Minister Benjamin Netanyahu said the Israeli campaign was aimed at defeating an existential threat from Iran, invoking the failure to halt the Holocaust in World War Two.

Israel's operation "will continue for as many days as it takes to remove this threat," he said in a TV address. "Generations from now, history will record our generation stood its ground, acted in time and secured our common future."

Iran's Supreme Leader Ayatollah Ali Khamenei said Israel had "unleashed its wicked and bloody" hand, and would suffer a "bitter fate".

In a phone interview with Reuters, Trump said it was not clear if Iran's nuclear programme had survived. He said nuclear talks between Tehran and the United States, scheduled for Sunday, were still on the agenda, though he was not sure if they would take place.

"I tried to save Iran from humiliation and death," Trump said.

Earlier, Trump posted on Truth Social: "Iran must make a deal, before there is nothing left."

Israel's National Security Adviser Tzachi Hanegbi said military action by itself would not destroy Iran's nuclear programme, but could "create the conditions for a long term deal, led by the United States" to get rid of it.

Two regional sources said at least

Jamaat leaders last night said they would share their stance when the Election Commission formally announces the polls schedule.

Chief Adviser Muhammad Yunus and BNP acting chairperson Tarique Rahman held the much anticipated meeting in London yesterday.

Islamic Andolan Bangladesh spokesperson Gazi Ataur Rahman in a video message said the meeting had been able to avert a crisis and end the uncertainty in national politics.

He hoped that political parties would accept the decisions made at the meeting and prepare for a fair election.

The Ganosamhati Andolan has called the meeting a step towards resolving the political crisis.

"Following the chief adviser's speech before Eid, we stated that the decision to hold elections in early April was not realistic. We view today's meeting as a positive development," said the party in a statement.

The Jatiya Samajtantrik Dal termed the meeting a "significant milestone" towards political stability and national unity.

In a statement, JSD President ASM Abdur Rob and General Secretary Shahid Uddin Mahmud Swapan welcomed the leaders' agreement that the next general election can be held before Ramadan 2026.

They also are of the opinion that the election must be preceded by visible progress on structural reforms and justice for the victims of July atrocities.

The JSD also called for immediate steps to formulate a National Charter aimed at overhauling state structures through inclusive participation of

political parties, professionals, and working class people.

Saiful Haq, general secretary of the Biplabi Workers Party, said political uncertainty over the election seemed to have eased following the meeting.

He said the climate had been confrontational in recent months, putting the electoral process at risk.

"Now that both sides have agreed on a February timeline, we're seeing signs of a breakthrough," he said, adding that the Election Commission must announce the polls schedule.

The 12-party alliance, known as a BNP ally, termed the meeting a "relief for the nation and a milestone on the road to democracy".

The alliance said the consensus on holding national elections before Ramadan had eased public anxiety and offered hope for a peaceful transition.

The alliance issued a statement, thanking Prof Yunus for shifting from his proposed April timeline and aligning with February for polls.

"This meeting must not remain symbolic," the leaders said. "Visible steps must follow on institutional reforms."

The Rashtra Sangskar Andolan, a platform of political commentators, said that while the understanding on election timing was desirable, failure to reach an understanding on constitutional reform would be a "betrayal to the martyrs" of the July uprising.

It also expressed disappointment that the joint statement issued after the Yunus-Tarique meeting made no mention of state or constitutional reforms.

Two die from Covid

FROM PAGE 1

Earlier, the DGHS issued a health advisory, urging people to avoid public gatherings and mandating mask use in crowded areas to curb the spread of the virus.

The infection rate saw a sharp increase in May, according to Covid-19 surveillance data analysed by the Institute of Epidemiology, Disease Control and Research (IEDCR). Of 1,409 samples tested that month, 9.51 percent were positive – the highest since January 2023.

Additionally, two new SARS-CoV-2 Omicron subvariants – XFG and XFC – were detected in Bangladesh for the first time at CMCH in April, according to a hospital-based influenza surveillance study jointly conducted by icddr,b and the IEDCR.

Air raid sirens sounded in Jerusalem yesterday evening, and Israel said it had detected the launch of a missile from Yemen, whose Houthi militia are one of the last remaining Iranian-aligned

Search on for missing people, clues

FROM PAGE 1

Smoke was still rising from one of the buildings.

Two police sources told Reuters that one of two black boxes from the 787 had been found. They did not say whether it was the flight data recorder or the cockpit voice recorder that had been recovered.

India's aviation regulator has directed Air India to carry out safety inspections on its Boeing 787-8/9 fleet after the crash in Ahmedabad, an order showed yesterday.

Air India and the Indian government are looking at several aspects of the crash, including issues with the jet's engine thrust, its flaps, and why its landing gear remained open, a source with direct knowledge told Reuters.

Indian Prime Minister Narendra Modi was briefed by officials on the progress of rescue operations when he

visited the crash site in his home state of Gujarat yesterday. Modi also met some of the injured being treated in hospital.

"The scene of devastation is saddening," he said in a post on X.

Residents living in the vicinity said that construction of the hostel for resident doctors was completed only a year ago and the buildings were not fully occupied.

"We were at home and heard a massive sound, it appeared like a big blast. We then saw very dark smoke which engulfed the entire area," said 63-year-old Nitin Joshi, who has been living in the area for more than 50 years.

Parts of the plane's fuselage were scattered around the smouldering building into which it crashed. The tail of the plane was wedged on top of the building.

The Wall Street Journal reported

yesterday, citing unnamed sources, that an investigation into the crash was focusing on "whether the aircraft had a loss or reduction in engine thrust".

It was the first crash for the Dreamliner since the wide-body jet began flying commercially in 2011, according to the Aviation Safety Network database.

The plane that crashed on Thursday flew for the first time in 2013 and was delivered to Air India in January 2014, FlightRadar24 said.

The lone survivor, a British national, told Indian media how he had heard a loud noise shortly after Flight AI171 took off.

India's Foreign Minister Subrahmanyam Jaishankar said he is in touch with foreign ministers of Britain, Portugal and Canada after citizens from their countries were killed in the crash.

meeting.

Tarique left his London residence around 1:00pm Bangladesh time, accompanied by Amir Khosru and BNP International Affairs Adviser Humayun Kabir.

As they reached the hotel, the BNP leaders were greeted by party activists who gathered in front of The Dorchester, holding banners, placards, and posters.

Khalilur Chief Adviser's Press Secretary Shafiqul Alam welcomed Tarique and others. Yunus and Tarique exchanged pleasantries before the meeting began, with the BNP leader inquiring about the chief adviser's health and passing along greetings from his mother and former prime minister Khaleda Zia, followed by a brief conversation about the weather.

Tarique gifted Yunus two books: "No One Is Too Small to Make a Difference" by climate activist Greta Thunberg, and "Nature Matters: Vital Poems from the Global Majority" by Mona Arshi and Karen McCarthy Woolf, and a pen.

After the meeting concluded, Tarique was seen leaving the venue with a smile on his face. He also waved to the party leaders and supporters outside the hotel.

He also called BNP Secretary General Mirza Fakhrul Islam Alamgir to inform him about the discussion with Yunus, Fakhrul told reporters at the BNP Chairperson's Office in Gulshan.

Fakhrul hailed the meeting as a "turning point" in the country's politics, urging all sides to move past old disagreements and focus on fulfilling the people's expectations.

He said the nation had anxiously waited for the outcome of the meeting. He praised Tarique for demonstrating "true statesmanship" and thanked Yunus for taking the initiative to resolve political uncertainty.

"It's time to strengthen national unity and move swiftly toward a fair election in mid-February," Fakhrul said, calling for renewed momentum for a transition to democracy.

A 'missed opportunity'

Yunus tells BBC about not being able to arrange a meeting with UK PM

STAR REPORT

Chief Adviser Muhammad Yunus said the meeting with UK Prime Minister Keir Starmer, which did not take place, was a "missed opportunity."

In an interview with the BBC, he said he had not received any explanation for why the meeting failed to materialise.

"I don't know whether I should be disappointed or he should be disappointed. It's a missed opportunity," he said.

When asked if Downing Street had given a reason for not scheduling a meeting with Starmer, he said: "I don't think we have received an explanation from that kind of thing. Probably he is busy with other important things."

As reported by the Financial Times, Yunus is visiting London to garner support for efforts to recover billions allegedly laundered abroad by the deposed Sheikh Hasina regime.

Starmer is a close friend and constituency neighbour of Labour MP Tulip Siddiq, niece of Hasina, who was ousted last year in a mass uprising.

A Downing Street spokesperson did not comment.

However, Yunus said the UK government was "extremely supportive" of this effort.

"I have a lot of admiration for the promptness with which they're treating the whole subject," Yunus told the BBC.

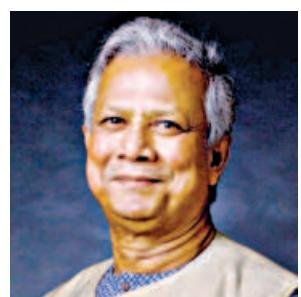

Yunus also said he could not meet Tulip as the allegations against her were a "court matter".

He also said he has confidence in Bangladesh's Anti-Corruption Commission (ACC), which is investigating Tulip on corruption allegations.

Earlier this week, Tulip sent a letter to Yunus for a meeting during his 4-day visit to London to discuss allegations against her.

The ACC has accused Tulip of illegally receiving land from the regime of Hasina.

Tulip, a former UK treasury minister, has denied the allegations and accused the Bangladeshi authorities of a "politically motivated smear campaign".

Support us
in enhancing
maritime
capabilities

Yunus urges UK

DIPLOMATIC
CORRESPONDENT

Bangladesh has sought the UK's support in enhancing the country's maritime domain capabilities and exploring marine resources, as Bangladesh is purchasing a naval ship from the UK.

The request was made during a meeting in London yesterday between Chief Adviser Prof Muhammad Yunus and Lesley Craig, head of the South Asia Regional Department at the UK's Foreign, Commonwealth & Development Office (FCDO). Commodore Whalley also accompanied the UK delegation.

During the meeting, Craig briefed Prof Yunus on the HMS Enterprise, a multi-role hydrographic survey vessel designed

Prime accused confesses to trafficking for Russia war

COURT CORRESPONDENT

Alomgir Hossain, a prime accused in a case filed over trafficking people to Russia for forced participation in the war, confessed to a magistrate yesterday.

Dhaka Metropolitan Magistrate GM Farhan Ishtiaq recorded his confessional statement after Alomgir agreed to give it, said a court staffer.

After recording the statement, the magistrate sent him to jail.

Details of the confession could not be immediately known.

Earlier, on the night of February 5, a team from the Criminal Investigation Department (CID) arrested Fabia Zerin Tamanna, a partner at Dream Home Travels and Tours Ltd, at Dhaka airport while she was attempting to flee to Nepal.

According to CID, the trafficking ring lured victims with promises of high-paying jobs in Russia -- offering salaries

Two injured in mugging incidents in the capital

STAFF CORRESPONDENT

Two people were injured in separate mugging incidents in the capital's Wari and Mohammadpur areas, where the muggers stabbed the victims and fled with cash.

One of the incidents took place around 5:00am yesterday in Wari's Tikatuli area, while the other occurred around 11:00pm on Thursday on Tajmahal Road in Mohammadpur.

In Wari, Sirajul Islam, 55, a poultry trader from Dholpur in Jatrabari, was heading to Kaptan Bazar by a CNG-run auto-rickshaw to buy chickens when three muggers stopped him near the Tikatuli rail gate, said his son Abu Bakar.

"They tried to snatch his money. When he resisted, they stabbed him in the hand and leg and fled with Tk 70,000," he told The Daily Star.

Sirajul was taken to Dhaka Medical College Hospital (DMCH) and later released after treatment.

In Mohammadpur, Mithu, 42, a battery-run rickshaw driver, was attacked while driving along Tajmahal Road.

Fakhruddin, a security guard who took Mithu to the hospital, said, "Three muggers tried to snatch his rickshaw. When he resisted, they stabbed him in the abdomen and leg. As he screamed, they fled with Tk 2,000."

Mithu was initially taken to Shaheed Suhrawardy Medical College Hospital and was later shifted to DMCH early yesterday due to the severity of his injuries. He is currently undergoing treatment there.

Inspector Md Farouk, in charge of the DMCH Police Outpost, confirmed that both victims were brought to the hospital after being stabbed by muggers.

VANISHING RIVERS of Patgram

Rampant illegal stone mining puts once-thriving waterways on deathbed; locals blame political influence, lack of action from authorities

S DILIP ROY and MOHAMMAD JAMIL KHAN, back from Lalmonirhat

Abdus Salam, 55, was sifting stones from a dredger machine on Dharla riverbank in Kawamari area of Lalmonirhat's Patgram upazila.

The midday calm was being shattered by the grinding roar of numerous dredger machines scattered across the riverbank, with long iron pipes sucking up stone and sand from the riverbed, leaving craters in their wake, while dust clouds swirl over the surface of the river.

Piles of sediment rise along the banks, as evidence of the relentlessly destructive operation.

"I was once a farmer. I lost all six bighas of my land to river erosion. There's nowhere else to go. But I have to feed my family. So, I'm forced into this. What else can I do?" Salam asked. His voice ached with bitterness.

"It was the local political leaders who started the extraction. We protested. No one listened. Now we do it ourselves. There's nowhere else to go. The riverbed is our last resort," he also said.

Patgram is crisscrossed by three rivers -- the 31.5-kilometre-long Dharla, the 21-km Singimari, and the 4-km Saniajan -- all flowing in from India.

The rivers were once lifelines of the region for farming, irrigation, fisheries and water-based transport. Now they are left on verge of oblivion having suffered

years of rampant, illegal stone extraction. Reminiscing old days, locals describe the rivers as more than waterways.

These rivers are their past and future -- sources of food, identity, and community. Yet, while a handful profit from plundering them, entire villages are left to grieve and survive amid ecological collapse.

Bangkanda's Nazir Ali, 78, recalled a time when boats used to glide across the river. "Now it's

MINING PITS OR DEATH TRAPS?

Day labourer Surat Ali, 60, from Kawamari village, traced back to how the predicament unfolded since around 1991. "We used to collect stones with nets. Then politically influential people brought in dredgers to extract stones on a large scale. That was the beginning of the end," he said.

Over the years, the riverbeds became curved into deep pits that eventually turned into death traps, with at least 20 people -- including seven students, eight

Lalmonirhat's Patgram is crisscrossed by three rivers -- Dharla, Singimari, and Saniajan. The rivers were once lifelines of the region for irrigation, fisheries and water-based transport.

Now they are left on verge of oblivion having suffered years of rampant stone extraction.

all sandbars. We get some water during the monsoon. The rest of the time, it's dead."

Nazrul Islam, 78, a freedom fighter from Rasulganj, "My 10 bighas of farmland beside the Dharla, as well as our family graveyard, are all lost to river erosion exacerbated by the rampant stone extraction."

Shamsheer Ali, 65, a farmer from Bangkanda, said those who protested were rather harassed by the administration. "Now I can't even bear to look at the river," he added.

"It's like a festival sometimes -- 400 to 500 dredgers working day and night," said Mahtab Ali, 70, another farmer from Rasulganj. "These rivers are dead. The only solution is proper dredging, not looting."

children, and five farmers or labourers -- drowned over the past two decades, accord

On July 25 last year, Miskat Hossain, 12, drowned in one such mining pit. His father, Nurul Islam Nuru of Bangkanda village, never recovered from the loss.

"The pain of losing my son engulfs me every single day. We protested repeatedly. Nobody cared," he lamented.

Ittekhar Ahmed, president of Patgram Press Club, said, "We've reported on these deaths, but the administration neither kept records nor took any measure. The illegal stone extraction just continues."

THE SYNDICATE
For decades, local politicians and their associates have been engaged in stone extraction, forming syndicates by exploiting their influence.

5 die of dengue in country

Four deaths recorded in Barguna alone

STAFF CORRESPONDENT

At least five dengue patients died in the last 24 hours -- the highest single day toll this year -- with four of the deaths reported from Barguna, currently the country's dengue hotspot.

With the latest fatalities, the total dengue death toll this year has risen to 28.

In addition, 159 new dengue patients have been hospitalised in the past 24 hours, 124 of whom are from the Barishal division, according to the Directorate General of Health Services (DGHS).

With the new admissions, the total number of dengue cases this year has climbed to 5,570, including 4,255 cases reported from outside Dhaka.

Currently, 531 dengue patients are undergoing treatment across the country, with 193 receiving care in Barguna.

No more residential gas connections Says energy adviser

OUR CORRESPONDENT, Sylhet

Energy Adviser Muhammad Fouzul Kabir Khan yesterday said the government will not provide residential gas connections, even in areas where gas is being extracted.

"Instead of pipeline gas, households in those areas where gas is being extracted will be supplied with LPG cylinders at a subsidised rate of 800 takas," he said while talking to reporters after visiting the Kailashthila MST plant in Golaganj upazila of Sylhet.

The adviser also visited the Kailashthila wells 7, 2, and other installations at the gas fields.

"Gas wastage in households is extremely high," he said.

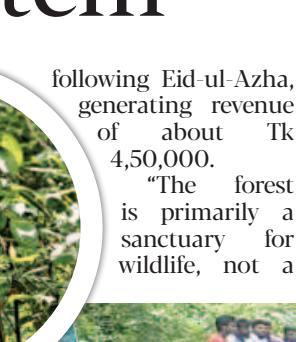

The adviser said gas production in the country is declining by about 200 million cubic feet annually. As a result, the government has had to increase LNG imports to meet the shortfall.

The government efforts are underway to boost domestic production and reduce dependency on imports, he said.

Fouzul Kabir said the two operational wells at the Kailashthila gas field are currently contributing 16 million cubic feet of gas to the national grid.

The adviser said, "In the past, when gas was not widely used, residential connections were provided. Now LPG is available. We are working to reduce its price."

He also said next time, households will rely on LPG, while pipeline gas will be reserved for industries."

Man killed in road crash in Araihazar

OUR CORRESPONDENT,
Narayanganj

An elderly fish vendor died after a three-wheeler, locally called a Nosimon, veered off the road and fell into a roadside ditch in the Araihazar upazila of Narayanganj.

The accident took place early yesterday on the Uchitpura-Ramchandradi road in the Gohordi area, said Khondaker Nasir Uddin, officer-in-charge of Araihazar Police Station.

The deceased was identified as Ali Akbar, 65.

Quoting locals, police said Akbar hired a Nosimon along with his two sons to buy fish from the Bhulta area in Rupganj upazila.

On the way, the driver lost control of the vehicle in the Gohordi area, causing it to fall into a roadside ditch.

Akbar was seriously injured after being crushed under the overturned vehicle. He was rushed to the Araihazar Upazila Health Complex, where doctors declared him dead.

Legal procedures are underway regarding the incident, the OC added.

Child drowns in river

OUR CORRESPONDENT,
Netrokona

A five-year-old boy drowned in the Mangaleshwari river in Kalmakanda upazila of Netrokona yesterday.

The deceased is Mujahid, son of Sabir Hossain of Dahapara village in Durgapur upazila of the same district.

According to family members and police, Mujahid, along with his parents, went to visit his aunt's house in Bishwanathpur-Nayapara village during the Eid vacation.

Around 2:30pm, he went to the nearby Mangaleshwari river while playing in the area. At one point, he accidentally fell into the river.

As his family couldn't find him for a while, they began searching. With the help of locals, he was eventually rescued from the river and rushed to the Kalmakanda Upazila Health Complex.

Afroza Akter, the on-duty physician at the emergency department of the health complex, confirmed that the child was brought dead to the hospital.

Md Lutfor, officer-in-charge (investigation) of Kalmakanda Police Station, said following necessary legal procedures, the body was handed over to the family.

A street vendor sells face masks from a makeshift stall in Dhaka's Dhanmondi area, as demand rises amid renewed Covid-19 concerns. The Directorate General of Health Services already issued an 11-point advisory for the public and suspected patients following a spike in cases at home and in neighbouring countries. The photo was taken recently.

Foreign mango varieties gain popularity in hill tracts

MD NAZRUL ISLAM, Ctg

Alongside local mango varieties, various foreign types of mangoes are now being cultivated in the three hill districts. The hilly orchards are currently adorned with colourful and flavourful mangoes. This year, the harvest has been abundant.

Last year, the three hill districts of the country produced over 200,000 tonnes of mangoes. This year, production is expected to be even higher, according to officials involved.

There was a time when people in the Chattogram region had to wait for mangoes from the northern parts of the country. But that is no longer the case. The mangoes produced in the three hill districts are now meeting a significant portion of the demand in the Chattogram region and are also being supplied to other districts across the country.

According to the Department of Agricultural Extension, mangoes are being cultivated on 3,620 hectares of land in Rangamati district. In Bandarban, both local and foreign mango varieties are being grown on 10,239 hectares, and in Khagrachhari, mango cultivation covers 4,421 hectares.

Md Nasim Haider, Chief Agricultural Officer of the Department of Agricultural Extension in the three hill districts, said mango cultivation has increased in the hilly areas. Many hobbyist orchard owners are cultivating various foreign mango varieties out of passion and are getting good yields. However, these foreign mangoes have not yet reached full-scale commercial production, he said.

Orchard owners in the three hill districts report that mango cultivation is increasing day by day. Previously, only local varieties were grown, but now foreign varieties such as the Japanese "Miyazaki", Thai "Katimon",

"Red Palmer", "Banana mango", "Brunei King", "Kyojai", "Valencia Pride", and "Kensington Pride" are also being produced.

The orchard owners said these mangoes are attracting buyers due to their excellent taste and being free from formalin. They are also providing new income opportunities for local farmers.

Mohammad Rafique, a wholesale fruit trader from Bandarban, said both local and foreign mangoes are now reaching not only local markets but also Chattogram, Dhaka, and the tourist city of Cox's Bazar.

A visit to various hilly markets revealed that depending on size and variety, local mangoes such as "Rupali" (Amrapali) and "Rangwai" are being sold at prices ranging from Tk 60 to 100 per kg. Among the foreign varieties, "Red Palmer" is selling at Tk 300, "Banana" at Tk 200, "Kyojai" at Tk 180, and "Red Queen" at Tk 300 per kg.

In Sindukchhari, Khagrachhari, Lashi Mong Marma has cultivated various foreign mango varieties on 25 acres of hilly land. His

cultivation of the Japanese "Miyazaki" mango in the hill tracts has created quite a stir.

Lashi Mong Marma said, "I'm cultivating many foreign mango varieties in my orchard. I've been maintaining mango orchards in the hills for about 10-12 years. I started growing foreign mangoes as a hobby, and I'm getting good yields. Many people come from far away to see these mangoes."

In Bandarban, Shahadat Hossain, a businessman from Chattogram, has established an orchard of foreign mangoes. "I started importing popular mango varieties from different countries and began setting up orchards around 8-10 years ago. Now the trees are bearing good fruit. These tasty mangoes are very enjoyable to eat and fetch good prices in the market."

Meanwhile, officials from the Department of Agricultural Extension in Bandarban reported that this year's mango harvest in the district has been abundant. About 60 percent of the yield is from the Rangwai variety, 30 percent from Amrapali, and 10 percent from other foreign varieties.

According to officials, training programmes for farmers are helping to expand mango cultivation in the region.

Erosion threatens new embankment in two villages

KM HABIBUR RAHMAN, Pirojpur

Around 3,000 residents of two villages under Pirojpur's Indurkani upazila have long endured immense suffering due to the absence of a protective embankment.

About seven years ago, an earthen embankment was constructed along the Kacha River in Togra village to replace the previous one, which had been washed away by the high tide caused by Cyclone Sidr in November 2007.

However, the new embankment also collapsed within a few months after being struck by tidal surges.

Finally, last year, a 1.5-kilometre embankment was constructed along Togra and Umedpur villages using geotextile and tube bags for added protection.

places due to insufficient placement of the protective bags, significantly weakening its structure.

"During the high tide at the end of May this year, water levels rose and struck the embankment," said Kabir Howlader of Togra village. "That's when the geotextile bags were displaced."

He added that the bags did not cover the full height of the embankment, leaving it inadequately protected.

Another resident, Abdul Mannan Howlader, said they were initially hopeful after the new embankment was built.

"But now we fear it might collapse again during the upcoming rainy season, when flooding is most frequent," he said. "If concrete blocks were placed on the embankment, it could be properly protected."

SEE PAGE 9 COL 7

This high-voltage power box, connected to underground electrical lines, has been left exposed after its cover was broken. Nearby residents have used wood to create a temporary cover; however, it still poses a risk to passersby and anyone who comes into contact with it. Locals have alleged that, despite informing the authorities, no action has been taken to cover the exposed box. The photo was taken from Kazi Nazrul Islam Avenue, near the west side of the metro rail station yesterday.

PABNA MUNICIPALITY Residents suffer due to sorry state of roads

AHMED HUMAYUN KABIR TOPU, Pabna

More than 130 kilometres out of total 240 km road network in Pabna Municipality are in a dilapidated condition due to lack of repairs and maintenance for prolonged period.

As such, residents including students, office-goers, businessmen and vehicle drivers have been suffering immensely during their daily commute.

Visiting the roads in different areas of the municipality recently, this correspondent observed that bitumen surface has worn off and small and large potholes have developed everywhere, causing disruption to vehicular movement and severe congestion on the busiest roads. The situation exacerbates when roads become submerged after rainfall during monsoon.

"It is difficult to use Pabna Bus Terminal Road (Ataikula Road) and Pabna General Hospital Road at normal time as those are entirely damaged and unfit for vehicular movement," said Md Idris Ali, a local rickshaw puller.

"Just commuting from one corner to another within the municipality often becomes extremely difficult as the roads are utterly damaged and vehicles charge high fares to ply the roads," said Akhirun Islam, a resident of Eidgah area beside Ataikula road.

"One needs to spend a minimum of Tk 40-50 for travelling barely half kilometre distance in the town. When it rains, it becomes even more of an ordeal as vehicle drivers simply refuse to take passengers using the battered roads. Office-goers and students suffer the most," he added.

"At least 1 km stretch along this road has long been in a dilapidated condition, making it an arduous task to take patients to the hospital.

Stepmother, grandmother killed 'by youth'

OUR CORRESPONDENT, Patuakhali

A 27-year-old man allegedly killed his stepmother and grandmother by slitting their throats with a machete in the Charabunia village under Madarunia union of Patuakhali Sadar upazila yesterday.

The deceased were identified as Shahida Begum, 48, and Kulsum Bibi, 125.

The alleged killer, Al Amin, fled the scene immediately after the incident, which took place around 1:00pm yesterday, said police.

Family members claimed Al Amin has been suffering from mental illness for over 5-6 years.

According to locals and police, Al Amin had gone missing several days ago. He was found three days back and brought back home by his family.

Yesterday around noon, his elder brother went to a local female union parishad member to collect documents needed for admitting Al Amin to the Pabna Mental Hospital. Their father, Abdur Razzaq, was away for work at the time of the killing.

Seizing the opportunity, Al Amin allegedly hacked his stepmother in the yard and then entered the house and killed his grandmother.

Police rushed to the spot after being informed, but the accused had already fled the scene.

IMMIGRATION RAID Democratic US Senator forced to ground

Appeals court allows Trump to keep National Guard in LA

REUTERS, Los Angeles

Democratic US Senator Alex Padilla was shoved, forced to the ground and handcuffed by security after attempting to ask a question at a press conference on Thursday held by Homeland Security Secretary Kristi Noem about immigration raids.

"I am Senator Alex Padilla. I have questions for the secretary," Padilla said during the press conference in Los Angeles, where Noem was discussing protests in the city over President Donald Trump's immigration crackdown. "Hands off," Padilla, 52, said to security agents before he was ushered out of the room.

Meanwhile, a US appeals court on

People gather for a protest against Israel's wave of strikes on Iran in central Tehran yesterday. Iran's Foreign Minister Abbas Araghchi condemned Israel's 'cowardly' attack on his country, in a phone call with his Kuwaiti counterpart.

PHOTO: AFP

Thursday allowed Trump to maintain his deployment of National Guard troops in Los Angeles amid protests over stepped-up immigration enforcement, temporarily pausing a lower court ruling that blocked the mobilization.

The 9th US Circuit Court of Appeals' decision does not mean that the court will ultimately agree with Trump, but it does leave command of the Guard with the president for now.

Earlier on Thursday, San Francisco-based US District Judge Charles Breyer found that Trump's deployment of the Guard was unlawful. Breyer's 36 page ruling had ordered the National Guard to return to the control of California Governor Gavin Newsom, who had brought the case.

It was a short-lived victory for Newsom, as Breyer's order was paused about two and a half hours later.

Asked for a comment, Newsom's press office referred to the governor's statement after the initial ruling, and noted that the appeals court put a temporary pause on the ruling but did not reverse it.

ISRAELI STRIKES ON IRANIAN NUKE SITES Trump's 'peacemaker' pledge takes big hit

REUTERS, Washington

On the campaign trail, US President Donald Trump promised to end the world's hottest conflicts and usher in global peace, but nearly five months in, with Israel attacking Iran and bloodshed in Gaza and Ukraine unabated, those hopes are in shambles.

US ally Israel struck dozens of Iranian targets in a dramatic and multi-faceted attack on Thursday night that analysts say threatens to eventually spiral into an all-out regional war.

The strikes appear to be a snub to Trump, who had repeatedly pushed Israeli Prime Minister Benjamin Netanyahu not to attack Iran, though the president himself had threatened to bomb the Gulf nation if nuclear talks failed.

"Trumpian diplomacy is one of the first casualties of these attacks," said Brett Bruen, a former foreign policy adviser to

Democratic President Barack Obama.

"He has struggled to even get close to a ceasefire (in Gaza), let alone peace in any major conflict. Iran was looking the most promising - and Netanyahu just spoiled it."

US-backed peace talks deadlocked in Ukraine, Gaza, elsewhere

Analysts say it is too soon to predict all-out regional conflict

The White House, the Israeli embassy in Washington and Iran's UN mission did not immediately respond to requests for comment.

The strikes are also a rebuke of Steve Witkoff, Trump's Middle East envoy and close aide, who has been working intensively with Iranian negotiators

towards a diplomatic solution to curb its nuclear program.

Witkoff had sought unsuccessfully to persuade Netanyahu to remain patient while US-Iran negotiations proceeded. Those talks have been deadlocked.

Some Trump allies privately acknowledge that his diplomatic efforts had been faltering even before Israel's attack.

His second term in office started with what seemed like a foreign policy win. Shortly before Trump's inauguration, Witkoff worked with aides to then-President Joe Biden to secure a long-sought ceasefire in Gaza between Israel and Hamas militants. But that accord fell apart in weeks.

The US has also made little discernible progress toward a peace deal between Russia and Ukraine, whose conflict Trump vowed to end before even taking office.

No communal, political motive behind

FROM PAGE 12

While the matter was still under investigation, locals organised a human chain on June 10 in support of Shahnewaz, demanding action against the accused officials, the statement said.

Following the demonstration, an agitated crowd reportedly entered the premises intending to assault staff members. Several employees were injured in the ensuing violence, the statement added.

In response, the district administration and the Department of Archaeology each formed an investigation

committee. Both are expected to submit reports within five days.

According to the ministry's statement, the Department of Archaeology has filed a case, and police have arrested five individuals so far, with efforts underway to apprehend the rest.

Security at the Kachharibari has since been reinforced. With support from the local administration and community, the site was reopened to visitors yesterday morning.

The ministry emphasised that no artifacts or relics associated with

Rabindranath Tagore's memory were harmed. "Nothing disrespectful or damaging to the honor of the poet has occurred," the statement read.

On Thursday, India condemned the "vandalism of the Rabindra Kachharibari" in Shahjadpur and urged Bangladesh's interim government to take strict action against the perpetrators.

Replying to a question at the weekly media briefing, Indian Ministry of External Affairs Spokesperson Randhir Jaiswal said, "We strongly condemn the despicable attack and the vandalism of the

ancestral home of Gurudev Rabindranath Tagore by a mob."

"The violent act is a disgrace to the memory and the inclusive philosophy and the teachings that the Nobel laureate espoused in Bangladesh."

"The attack falls in the broad pattern of systematic attempts by extremists to raze the symbols of tolerance and eviscerate the syncretic culture and the cultural legacy of Bangladesh. We urge the interim government [of Bangladesh] to rein in the terrorists and take strict action against the perpetrators..."

The strikes are also a rebuke of Steve Witkoff, Trump's Middle East envoy and close aide, who has been working intensively with Iranian negotiators

Mossad smuggled weapons into Iran ahead of strikes

Says Israeli security official

CNN ONLINE

Israel's Mossad spy agency smuggled weapons into Iran ahead of yesterday's strikes that were used to target its defenses from within, according to an Israeli security official.

The official said that "a base for launching explosive drones was established inside Iran and that the drones were activated during Friday's attack to target missile launchers at a base near Tehran."

Israel had also "smuggled precision weapons into central Iran and positioned them near surface-to-air missile systems," the official said, adding that Israel also deployed strike systems on vehicles.

Israel struck at the heart of Iran's nuclear, missile and military complex early yesterday, in an unprecedented attack that killed several of Iran's most powerful figures and plunged the wider Middle East into dangerous new territory.

Not since the Iran-Iraq war of the 1980s has Iran seen such a devastating series of strikes in a single day. The attacks surpass a series of historical flashpoints, and signal a new phase in a conflict between Israel and Iran that for decades was waged in the shadows, before exploding into real-world confrontation in the past two years.

AIR INDIA CRASH A 10-minute delay saved her

NDTV ONLINE

For Bhoomi Chauhan, getting caught in terrible traffic on the roads of Ahmedabad on Thursday proved to be a blessing in disguise. The Bharuch resident was upset but escaped a terrifying near-death experience after she missed her crucial London-bound flight.

"I was getting ready to step out of the airport when I learnt about the crash. I began shivering. My legs started trembling," Bhoomi said after she missed the doomed flight.

Bhoomi was scheduled to board AI 171 to travel to London. "The flight was scheduled to take off at 11.00pm. The boarding procedure was over at 12.10pm and I reached at 12.20pm. I had reached the checking-in gate and requested them to allow me to board the flight. I told them I shall clear all the formalities quickly but they did not allow me to proceed," she said.

Air India crash a wake-up call for all

It shows why aviation safety can never be compromised

We are shocked and saddened by the devastating crash of an Air India plane that went down moments after taking off from Ahmedabad, Gujarat on Thursday, in what is now the world's worst aviation disaster in a decade. Our deepest condolences go out to the families and loved ones of the victims. Air India confirmed on Friday that all but one of the 230 passengers and 12 crew members on board were killed. Among the dead were also eight local residents, including four medical students, as the aircraft—a Boeing 787-8 Dreamliner—crashed into the residential quarters of a medical college in the area. The death toll may rise further as more details emerge.

India's Aircraft Accident Investigation Bureau (AAIB) is presently probing into what caused the crash, which could take some time, as such investigations involve multiple factors. Preliminary theories suggest that dual engine failure, bird strikes, or mechanical malfunction could be possible factors, with the aircraft failing to gain enough thrust after takeoff. After analysing footage of its crash, aerospace safety experts noted that the plane's landing gear was down at a phase of flight when it would typically be up, an anomaly that may have contributed to the loss of power. However, the recovery of black box data could provide definitive answers.

This tragedy must serve as a wake-up call for those in the aviation industry, including in Bangladesh. The crash has shown what can happen if safety protocols are compromised—a reality that Bangladesh, with its own history of aviation safety concerns and irregularities, can ill afford to ignore. Major stakeholders, including the Civil Aviation Authority of Bangladesh (CAAB) and Biman Bangladesh Airlines, the national flag carrier, have long faced criticism for repeated incidents of negligence and corruption. Only recently, we were alarmed to learn of an investigation from CAAB itself that uncovered numerous irregularities in pilot licensing and training programmes. These included serious breaches such as flying schools recommending pilot licences without students completing mandatory solo flight hours, falsification of flight records, and the use of unauthorised software in written tests. Shockingly, one pilot even certified himself. Despite being aware of such practices, CAAB has failed to take action.

Unless these systemic and deep-rooted issues are addressed, Bangladesh's aviation sector will remain vulnerable to the kind of tragedy we mourn today. The lesson here is clear: aviation safety must never be taken lightly. From airworthiness of aircraft to pilot qualifications, from pre-flight inspections to regulatory vigilance—every step must be treated with utmost seriousness. We urge aviation regulators and airline/airport operators in Bangladesh to reassess their standards and practices. If a disaster can happen to a major carrier like Air India, how confident can we be about averting a similar tragedy?

Why is child marriage still so widespread?

Let our girls reach their full potential

We are alarmed by the continued prevalence of child marriage which no legal or institutional framework seems able to deter. According to a recent UN report, Bangladesh has the highest rate of child marriage in South Asia, with a staggering 51 percent of girls being married off before they turn 18. Unfortunately, while we are failing to stop this scourge, our neighbours are making significant progress in addressing it. For instance, only two percent of girls are married before 18 in the Maldives, 10 percent in Sri Lanka, 18 percent in Pakistan, and 23 percent in India. This stark contrast underscores the need to reassess whether our efforts are on the right track.

Needless to say, child marriage is at the root of many problems that girls and women face throughout their lives. It not only limits their opportunities in education and employment, but also enhances their risk of facing violence. Studies have found a significant connection between child marriage and gender-based violence. Child brides also face a heightened risk of childbirth-related deaths. Currently, the maternal mortality ratio in Bangladesh stands at 115 deaths per 100,000 live births. Preventing child marriage could help reduce this ratio considerably. We have ample laws and regulations in place to do so. Why, then, are we failing to do it?

To effectively combat this scourge, it is crucial to understand why parents choose to marry off their daughters at a young age. While poverty remains a major driver, lack of awareness and societal pressure also contribute to the prevalence of child marriage. Alarmingly, many parents secretly arrange these marriages despite being aware of the legal consequences. For instance, between July 2021 and June 2022, some 88 child marriages were stopped at the Tala upazila of Satkhira, but 65 of these later took place in secret. This highlights the immense challenges in stopping this trend.

Against this backdrop, there is no alternative to sustained action from the authorities. They must strictly enforce existing laws and expand awareness campaigns nationwide. The harmful effects of child marriage should also be integrated into school curriculum to educate students. It is equally important to create jobs and financially support marginalised communities so that families don't feel pressured to marry off their daughters early. Since 18 is the minimum legal age for marriage, the authorities must enforce this standard at any cost.

THIS DAY IN HISTORY

First prisoners at Auschwitz

On this day in 1940, the first transport of Polish political prisoners arrived at Auschwitz, which became Nazi Germany's largest concentration, extermination, and slave-labour camp during World War II. More than one million people died in Auschwitz.

EDITORIAL

CAMERAS IN THE COURT

A step towards transparency or trial by media?

Barrister Khan Khalid Adnan is advocate at the Supreme Court of Bangladesh, fellow at the Chartered Institute of Arbitrators, and head of the chamber at Khan Saifur Rahman and Associates in Dhaka.

KHAN KHALID ADNAN

On June 1, a historic moment unfolded in Bangladesh's justice system. For the first time, the International Crimes Tribunal (ICT) allowed a live television broadcast of its proceedings, marking a bold step towards judicial transparency. The hearing involved the submission of formal charges against former President Hosni Mubarak's trial backfired, with the iconic image of him lying on a hospital gurney inside a cage overshadowing the legal substance of

to question the tribunal's legitimacy. For some observers, the televised trial of Saddam Hussein in Iraq appeared more as a spectacle of humiliation than a genuine pursuit of justice. Egypt's decision to televise former President Hosni Mubarak's trial backfired, with the iconic image of him lying on a hospital gurney inside a cage overshadowing the legal substance of

This development follows the recent insertion of Section 9A into the International Crimes (Tribunals) Act, 1973, which empowers the tribunal to record and broadcast its proceedings under conditions that safeguard the safety, dignity, and privacy of participants. While the move has been widely welcomed as a stride towards accountability, it also raises critical questions: can justice truly be served in front of a camera? Or does the lens risk turning legal proceedings into spectacles?

There is no doubt that transparency strengthens trust in the judiciary. Bangladesh's legal system, like many others, has often been accused of opacity, inefficiency, and undue influence. By allowing the public to witness courtroom proceedings, the ICT opens its doors to scrutiny and, potentially, greater legitimacy. For a country grappling with past atrocities and democratic backsliding, such openness can provide catharsis and help restore public confidence.

Moreover, Bangladesh joins a growing number of jurisdictions embracing camera access in courtrooms. The International Criminal Tribunal for the former Yugoslavia (ICTY) set an early precedent by televising high-profile trials, most notably those of former leaders Slobodan Milošević and Radovan Karadžić, both of whom were accused of human rights violations and war crimes. The goal was to educate the public, honour the victims, and demonstrate that no one is above the law.

However, the international experience also provides cautionary tales. In some cases, the courtroom turned into a stage. Milošević used the broadcast to promote his political agenda, while Karadžić employed it

the proceedings. Consequently, the presiding judge reversed his decision to televise the proceedings after the first day, citing the need to protect the public interest.

The core problem lies in the performative risk of broadcasting. While the public has the right to observe justice being done, there is a danger that justice may be swayed—if not by the camera, then by its audience. Witnesses may feel intimidated or reluctant. Judges and lawyers may alter their demeanour, consciously or subconsciously. And worst of all, public perception may be shaped not by legal reasoning but by dramatic moments clipped, edited, and circulated in the media.

The media landscape of Bangladesh presents an added layer of complexity:

It is diverse but often deeply polarised. While some outlets strive for responsible journalism, others may be tempted to sensationalise the trial proceedings for viewership or political mileage. In this climate, live broadcasts risk misinterpretation, with legal nuances lost amid headlines and soundbites.

How, then, can we balance the need for openness with the imperatives of fairness and dignity?

One approach is to adopt a filtered broadcast model, wherein selected portions of proceedings, especially those of public significance, are recorded and aired with contextual explanations. This mirrors practices at the International Criminal Court (ICC) and the ICTY, where full proceedings are recorded but public access is

subtles in trial broadcasts. Given that proceedings are conducted in Bangla, this would significantly expand accessibility for the international legal community and human rights observers. Bangladesh has long sought recognition for its commitment to justice, particularly in prosecuting international crimes; making such trials intelligible to global audiences would reinforce its credibility.

Importantly, the media must recognise its pivotal role. Journalistic freedom carries with it an ethical duty: to report accurately, explain legal developments with care, and avoid prejudging outcomes. Justice is a solemn process. The press must resist the temptation to exploit courtroom moments for clickbait or partisan narratives. Instead, it should help build

This screengrab from a live broadcast shows International Crimes Tribunal Chief Prosecutor Tajul Islam reading out the charges against former Prime Minister Sheikh Hasina and others at the tribunal on June 1, 2025.

managed carefully. Such an approach safeguards the interests of victims and witnesses, avoids disruption, and provides the public with a coherent understanding of complex legal arguments.

The ICT in Bangladesh should consider developing detailed protocols for courtroom recording and media coverage taking guidance from the practice of international courts. These may include restrictions on camera angles, identity protection for vulnerable witnesses, and codes of conduct for journalists. The goal should not be to censor, but to ensure that courtroom decorum is maintained and that proceedings are not prejudiced by external pressures.

Another practical and meaningful reform would be the inclusion of English

a more informed, legally literate society.

As for the International Crimes Tribunal, the live streamed hearing on June 1 was indeed a milestone. But whether this becomes a catalyst for enduring transparency or a cautionary tale of overexposure will depend on what follows. The tribunal should proceed with measured caution, learning from both global best practices and its own experience. The stakes are too high to risk turning justice into a performance.

Public trust in the judiciary cannot be manufactured through media optics alone. It must be earned through consistent fairness, rigorous legal reasoning, and above all, the assurance that justice is not only done, but done with dignity. Cameras may aid that mission, but only if guided by principles.

To be heard, workers need trade unions

Mahmudul Hasan is research associate at Bangladesh Institute of Development Studies (BIDS).

MAHMUDUL HASAN

In a fast-changing economy like Bangladesh, the manufacturing sectors, especially RMG, underpin growth and integration into global value chains, playing a pivotal role. They employ millions, support rural-to-urban migration, and anchor the nation in global markets. Yet, beneath the clang of machines and the glow of economic progress lies a sobering reality: the persistent struggle of workers to have their voices heard and their rights protected.

Amid rising productivity and industrial expansion, many factory workers continue to operate in environments where fair wages, basic benefits, and workplace safety remain aspirations rather than realities.

They need functional trade unions, which, at their core, are instruments of collective bargaining. A properly operating trade union empowers workers to negotiate collectively for fair pay, reasonable working hours, and safer working conditions. When active and functional, unions play a transformative role, not only by improving individual livelihoods but also by fostering a more equitable and accountable labour market.

More than just wage negotiators, unions can influence workplace policies and secure non-wage benefits such as occupational safety, paid leave, access

to healthcare, and effective grievance mechanisms. At their best, they cultivate a culture of dialogue, ensuring that economic progress does not come at the cost of exploitation.

As a labour abundant country that relies heavily on low-cost production, Bangladesh has specialised in labour-intensive manufactured exports, particularly RMG products. While globalisation and increased labour market flexibility have been expected to boost workers' agency, the reality has been more complex. Fragmented contracts, widespread subcontracting, and high rates of informal employment have diluted workers' ability to assert their rights. Informal employment, which dominates the Bangladeshi labour market, is typically linked with lower productivity, depressed wages, limited social protection, and heightened vulnerability to poverty.

The case for trade unions is not ideological, it is pragmatic. Global evidence shows that unionised workplaces not only deliver better economic outcomes but also create safer, more equitable environments by aligning practices with national and international labour standards.

Unionised settings often offer fairer conditions—reasonable hours, anti-discrimination protections, and a voice in workplace decisions—ultimately

benefiting both workers and firms.

In Bangladesh, unions often advocate for a living wage that supports a decent standard of living, including food, housing, education, healthcare, transport, and savings for emergencies. Importantly, the benefits of union activity often extend beyond union members. Spillover effects help raise labour standards across the board, as non-unionised workers in the same factory, or firms in the same supply chain, benefit from improvements initiated through collective bargaining.

Union presence is generally higher in export-oriented industries than in domestic facing sectors. While other export industries, such as leather, show relatively high union coverage, these are mostly combined unions rather than factory-level basic unions. Historically, RMG factory owners have resisted unionisation, slowing growth despite industry expansion. However, the Rana Plaza tragedy in 2013 catalysed change: international pressure spurred a sharp increase in union registrations, supported by legal reforms and advocacy led by development partners like the EU.

Still, the mere presence of trade unions does not guarantee effectiveness. Their impact depends on their ability to engage in genuine collective bargaining, enforce workers' rights, and ensure meaningful improvements in working conditions. In this regard, RMG unions are relatively more active, thanks to the sector's visibility, size, and global scrutiny.

Yet, significant challenges persist in Bangladesh's labour environment. Despite having legal tools like the Labour Act and Labour Rules, union registration remains cumbersome and politicised. Workers organising

unions frequently face intimidation, harassment, or even dismissal. In the informal sector, which encompasses the majority of employment, most workers are excluded from basic labour protection altogether.

Public discourse on labour rights often centres on the RMG sector—and understandably so, given its scale and international importance. But Bangladesh must now turn its attention to other rising industries: light engineering, electronics, plastic, furniture, food processing, and more. These sectors are expanding rapidly, yet labour representation remains weak or non-existent.

In these lesser-monitored sectors, workers are particularly vulnerable, subject to weaker enforcement, lower pay scales, and minimal protections. Without factory-level unions, most lack any structured mechanism to voice concerns or report exploitation. Stronger trade unions, paired with the enforcement of national and international labour standards, are vital for ensuring fair labour practices and sustainable industrial development.

As Bangladesh charts its path towards the upper middle-income status, the voices of its workers must not be left unheard. Ensuring fair wages, safe working conditions, and meaningful representation is not only a question of rights, it is central to building a resilient, future-ready economy. Strengthening trade unionism across all manufacturing sectors requires decisive reforms, employer accountability, and international support. If Bangladesh is to achieve truly inclusive industrial progress, it must place workers' voice and dignity at the heart of its development agenda.

THIS DAY IN HISTORY

First prisoners at Auschwitz

On this day in 1940, the first transport of Polish political prisoners arrived at Auschwitz, which became Nazi Germany's largest concentration, extermination, and slave-labour camp during World War II. More than one million people died in Auschwitz.

BLOWIN' IN
THE WIND

Dr Shamsad Mortuza
is professor of English at
Dhaka University.

SHAMSAD MORTUZA

We just came back from a trip to Lake Ohrid in North Macedonia. The boat driver was surprised by our over-insistence on wearing life jackets, despite the water appearing shallow and calm and the imported boat being highly reliable. We told him about the number of deaths by drowning over the last few days that had us concerned. The tragic end of two friends at a lake in Ontario, Canada, one being a seasoned pilot of a 787 Dreamliner in Bangladesh and the other a trailblazer in the sustainable textile industry, was fresh in our minds. Then there was the heartbreaking news of a father who died along with his teenage daughter while giving her swimming lessons in their village pond during the Eid holidays. And then there are people washed away by the treacherous waves at Cox's Bazar: six people in a day. Then came the big news of an Air India Boeing crashing in Ahmedabad soon after its takeoff. The plane slammed onto a medical hostel where some intern doctors were having lunch. Death visited them like a giant bird from the sky, carrying 242 passengers and crew with it.

Just when we thought a long holiday would give us a respite from everyday mayhem, sparing an opportunity for us to unwind and reconnect with our near and dear ones, these news reports of unrelated incidents reminded us of the dire threat of leisure turning lethal. With the benefits of hindsight, we can utter the ignored truth: some of these accidents were preventable.

The idea dawned on me while watching the disciplined driving during our trip to the Balkans. The number plates of the cars suggested that they have come from all over Europe. Yet, driving through the cliff-hugging narrow roads, they followed a particular protocol for overtaking. It was never like in our country, where a trail of vehicles are seen rushing together for lateral passing when there is no vehicle visible on the other side. The cars overtook one at a time, almost like the cyclists in the Tour de France. I think the combination of common

sense and rule abiding reduces the chances of accidents. Applying the same principle to the recent deaths makes sense.

The death of six tourists in Cox's Bazar over the Eid holidays would have been a national scandal in another country. The beaches would have been marked unsafe, and visitors would have been instructed to stay ashore. Here, our lack of common sense and defiance against safety directives stall any such initiative. Indeed, the authorities have marked some areas of the beach as danger zones. However, while thousands of people congregate in Cox's Bazar to enjoy the seaside sands, only a small number of them heed the warning signs. The lifeguards are posted on the designated beaches, and they don't have the manpower to patrol the longest natural beach in the world. According to a *Prothom Alo* report, 25 lifeguards and 25 beach workers, along with 70-80 tourist police officers, are deployed to oversee 100,000 tourists on a daily basis. The lack of institutional safeguards is further evident in the incident where two parasailers fell as their belts got unfastened. There is a complete lack of supervision. Vacationers unaware of the tricky water currents, hidden channels, and quicksands of the sandy shore often get overly enthusiastic and adventurous. In the absence of proper directives, implementation of rules, and common sense, tourists are left to rely on instinct, or worse, luck.

The *Prothom Alo* reports 49 deaths in the past six years. The actual number of deaths may be higher as many such incidents go unreported. We lament these deaths only when they get a human face through media. How do we justify that there is no sea netting system to curate a safe zone for swimming? The billion-dollar industry is operating independently. There is no collective strategy for inarguably the most famous tourist spot in Bangladesh. For instance, unplanned growth is visible by the presence of hotels on the beach itself, in a flagrant violation of rules. When those responsible for enforcing the rules

violate them, we must be concerned about the general welfare of the location we wish to promote as a site of national significance. We can engage the hotel owners as stakeholders in the city's beautification and landscaping efforts. There are now 600 multistorey hotels and resorts that can share the cost of making the sea safe for their visitors.

The alarming number of deaths gives Cox's Bazar the bad press that no PR campaign can override. There is no comprehensive,

stakeholders. Local community members should be engaged for beach patrol and rescue efforts. Digital apps can be used to inform beachgoers of conditions in real time. The hotels need to establish their emergency protocols.

The entire system must prioritise safety. There has to be coordination between first responders and the hospitals. We need a trained workforce that knows what to do when things go wrong. This will require

Our policymakers must ensure a national audit of leisure-related deaths in the era of big data. The categories of location, activity and cause can help us determine the nature of an intervention and the requirements for tourist safety certification. Giving local leaders the autonomy to make decisions can streamline bureaucratic processes and bring decision-making closer to the issue at hand. The deaths of the father and daughter in Moulvibazar, for

Given the large number of tourists that visit the beaches in Cox's Bazar every year, treating beach safety as a national responsibility is crucial.

FILE PHOTO: STAR

year-round policy for beach safety. One can only hope that the Cox's Bazar authority will take steps that include the removal of unplanned structures, defining and securing swimming zones, mandatory safety briefings by tour operators, multilingual signage, and fully equipped emergency units stationed strategically along the coast. Treating beach safety as a national responsibility is crucial. Given the mismatch between the scale of the beach and the resources allocated, the integrated policy must engage the local

a change in our attitude. As a nation, we have a tendency to ignore precautions as unnecessary or overcautious. People mock wearing life jackets on a boat as a sign of fear and breaking red flags at the beach as a sign of "bravery." Education, awareness campaigns, and the upholding of regulations can change this mindset. Otherwise, the same tragedies will continue to occur. Bangladesh, with its growing middle class and domestic tourism boom, must not wait for another tragedy to implement similar regulations.

example, remind us of the need for basic CPR training at a community level. Swimming as a survival skill can be formally included in our curriculum as well.

The recent tragedies show that a person's death is only part of the story. The truth is, we could have prevented some of these deaths. Each story, whether from the sky, a foreign lake, a rural pond, or the roaring sea, tells that tale of our vulnerability. It reminds us of how much we have to lose and how little we often do to protect it.

Why we need more 'angry' Greta Thunbergs

Zeenat Khan
is a contributor to South Asia-based journals and magazines.

ZEENAT KHAN

The Western world, except for a few European countries, has largely been silent over the ongoing genocide in Gaza. Two million people are living under extreme duress, the majority of them camping under the open sky, in the Gaza Strip. Since March 2 this year, all aid has been blocked from entering Gaza. Hunger has been weaponised. Children are dying not only from bombs, but also from hunger. In the face of such a grave humanitarian crisis, a few brave pro-Palestinian protesters, such as 22-year-old Swedish climate activist Greta Thunberg, headed for Gaza on a civilian vessel with aid. US President Donald J Trump mocked this effort and labelled Thunberg as "strange" and "angry," recommending "anger management" for her to learn techniques to change "unhelpful thoughts and behaviours."

People who care about the planet, except for a handful of cynics, are familiar with what Greta Thunberg has been doing since she took up activism. People have been impressed by her gentle, no-nonsense demeanour and

concern for the planet. She has inspired millions to change their perspective beyond here and now, and onto the future. She challenged many big-name politicians to open their eyes to see how climate change poses a danger to our very existence. Her campaign against global warming resonates with how she wants the world to be: clean, safe, and hazard-free.

The same determination took Thunberg and a few more activists en route to Gaza to assist with much-needed aid. Her voyage on a boat called Madleen was being operated by the Freedom Flotilla coalition. But on June 10, the Israeli navy intercepted and seized their boat. All the activists on board were arrested. To make matters worse, the Israeli forces were sarcastically calling it a "celebrity selfie yacht."

Thunberg and three other activists agreed to an immediate deportation. They were put on a plane to Paris. The rest of the members refused to sign the deportation papers and

were taken into custody. Upon arrival in Paris, Thunberg expressed great concern about the safety of her fellow activists in detention.

Before Thunberg's deportation, she was offered a sandwich wrapped in plastic by a soldier of the Israel Defense Forces (IDF), an image of which went viral on social media. The activist dismissed it as a mere "publicity stunt" by the IDF.

When mass death from starvation looms in Gaza, mocking Thunberg will not solve anything. Being different most certainly doesn't mean one has to be characterised in derogatory terms. The world needs many more "strange" and "angry" Greta Thunbergs at this moment. Donald Trump here has an opportunity to be remembered on the pages of history books as a "do-gooder" if he can persuade Israel's Prime Minister Benjamin Netanyahu to stop the genocide in Gaza. Otherwise, this systematic extermination of a nation will haunt us, our children, and grandchildren in the years that lie ahead.

Since the beginning of Israel's brutal killings of the Palestinians, our collective conscience has failed to find answers. Most of us suffer in silence, unable to do much except protest. Very few courageous ones like Thunberg took it upon themselves to actually do something. However symbolic the group's action might have been, Donald Trump calling her "strange" and "angry" is unconscionable.

I just keep on praying that the killing of children and their parents in Gaza will stop. I start each day with my morning prayers, finding a sense of purpose and connection to the divine. A few mornings ago, my attention was disrupted by notifications of multiple texts on my phone. The text messages came in all at once. Instantly, I knew it was one of my family members texting from the other side of the Atlantic Ocean. She knows this is when

they are taken into custody.

I would be just about done with praying. The text messages contained a series of thought-provoking questions about the starving children of Gaza. "What I don't understand is why God would let this happen. If he knows the suffering, why doesn't he stop it?" Read the first one. "Why would children die of starvation? This I cannot understand," said the next. "Undoubtedly, this is the worst form of death," was my instantaneous reply.

Then I added, "Thinking and rationalising that a human is less than a human does not justify all the murders of innocent people."

By weaponising starvation, isn't Israel sending the wrong message to the world that the lives of the Palestinians do not matter? And they are not really people like you and me? Why doesn't the humanitarian law apply to the Palestinians? This dehumanisation is something we must refuse to accept.

Children are dying of hunger in Gaza. Their parents are getting killed by bombs and drones while trying to fetch food parcels for their malnourished and starving children.

The aid distribution centres have become death traps. Al Jazeera reported that an Israeli drone attack on the morning of June 11 killed 31 aid seekers near a food distribution point in central Gaza. Two hundred more were injured in the attack.

When mass death from starvation looms in Gaza, mocking Thunberg will not solve anything. Being different most certainly doesn't mean one has to be characterised in derogatory terms. The world needs many more "strange" and "angry" Greta Thunbergs at this moment. Donald Trump here has an opportunity to be remembered on the pages of history books as a "do-gooder" if he can persuade Israel's Prime Minister Benjamin Netanyahu to stop the genocide in Gaza. Otherwise, this systematic extermination of a nation will haunt us, our children, and grandchildren in the years that lie ahead.

CROSSWORD

YESTERDAY'S ANSWERS

SABILA DEBUTS, 'Taandob' ensues

I haven't given it much thought, to be honest. Wherever I am today, it's because of my years in television and YouTube, so it's unlikely that I'll ever be completely off it. However, I am looking to do more films with good scripts and messages for the audience.

SADI MOHAMMAD SHAHNEWAZ

Once a sweetheart of television, Sabila Nur has hit the bullseye with her silver-screen debut with a leading role opposite Shakib Khan in *Taandob*. The film will go down in Bangladesh's cinematic history for being rife with action, twists, and cameos.

Big screen Sabila has a ring to it. What kind of feedback are you getting from the audience?

I am simply overwhelmed! As an overthinker, I was skeptical of how the audience would perceive me, especially while shooting *Lichur Bagane*. However, I was flabbergasted at how much love I have been receiving for the film. People loved my performance not only in multiplexes, but in single-screen halls as well. Starring opposite our megastar Shakib Khan is a dream for every actress, and I am glad to have lived it.

With so many stars cast in the film, and cameos only adding to the hype, did you ever feel overshadowed in the mix?

Never. I was honestly stoked to work alongside the likes of Jaya Ahsan, Fazlur Rahman Babu, Shahiduzzaman Selim, and so many others in the film. When Raihan Rafi, brilliant director that he is, read me the script, I understood both the limitations and strengths of my role, and I believe we delivered the best possible portrayal. So I have no qualms about it.

PHOTO:
SHEIKH MEHEDI
MORSHED

What makes Raihan Rafi so successful, according to your experience shooting with him?

He is just so calm and cool-headed on-set. Regardless of the situation, he knows what he wants, and there is no ruckus when shooting. You could say that he is a consummate professional.

Was it nerve-wracking to share the screen with Shakib Khan? Talk us through your first day of shooting. I remember it vividly – It was 5:30 in the morning at Rajshahi, and I was

worried that I hadn't gotten enough sleep. My first shot was with Shakib Khan, so I was naturally anxious. However, every person on that set did their best to make me feel at home, and at no point did they treat me like I was an 'outsider'. Shakib bhai has been super-kind to me. He is encouraging, warm, and professional. After that first shot, I was on my way and did not look back for the rest of the shots.

Now that you've debuted on the big screen, will it be difficult to go back to television?

I haven't given it much thought, to be honest. Wherever I am today, it's because of my years in television and YouTube, so it's unlikely that I'll ever be completely off it. However, I am looking to do more films with good scripts and messages for the audience.

There's an unfortunate perception among the audience that actresses in commercial cinema are 'showpieces' in the film. Do you want to actively battle that notion?

I do, but I don't think about it that way. The talented women who paved the way have worked very hard to get where they are right now, so I have nothing but respect for them. However, rather than coming out to say that 'we are much more,' why don't we just show them? That's what I want to do.

STYLE STATEMENT

Snoop Dogg

The red carpet suddenly resembled one fit for royalty as Snoop Dogg made his entrance at the BET Awards 2025, draped head-to-toe in a bold, electric blue ensemble that commanded attention.

With a leather-panelled coat layered over a tonal shirt and matching trousers, the West Coast icon blended street sensibility with high fashion finesse. His structured silhouette and monochromatic palette are modern and fearless, mirroring Snoop's decades-long reign over music and style.

Paired with signature shades, diamond chains, and an effortless cool only he can carry, this was more than a look – it is yet another addition to the legacy of his style statements.

WHAT'S PLAYING

'MANCHILD' by Sabrina Carpenter

Pop's sharpest raconteur, Sabrina Carpenter, returns with *Manchild*, a blisteringly catchy track that disguises its barbs beneath a sugar-coated veneer of synth-pop shimmer. Written alongside Amy Allen and Jack Antonoff on what Carpenter described as "the best random Tuesday of my life" – and it shows. There's a spontaneous levity to the track, but also precision. Each line lands with the weight of someone who has been there, done that, and bought the ironic T-shirt.

Less a heartbreak anthem than a clever postmortem, *Manchild* captures the confusion, comedy, and occasional rage of twenty-something dating culture. Its lyrical tone – equal parts affectionate and exasperated – evoking the feeling of a summer road trip soundtracked by an emotional coming-of-age montage.

The accompanying video, currently

trending globally, leans into playful absurdism. Carpenter parades through exaggerated set pieces – a courtroom, a beauty pageant, a flaming bedroom – with glossy detachment and enviable hair.

Manchild has quickly climbed the charts, debuting in the top 5 of Spotify Global and peaking at number 2 on Apple Music's Pop Chart within 48 hours of release.

1-MINUTE REVIEW

'THUNDERBOLTS*'

When superpowers meet emotional scars

*Thunderbolts** stands out in the Marvel canon for placing mental health at the heart of its story. While past MCU entries touched on trauma, this film fully commits to exploring it, particularly through Florence Pugh's emotionally raw portrayal of Yelena Belova. Alongside Lewis Pullman's mysterious and deeply human Bob, the narrative focuses on healing through connection.

Despite being a team-up movie, it's Yelena and Bob's journey that anchors the film, supported by solid performances from David Harbour and Wyatt Russell. Though

Bucky Barnes feels sidelined, the ensemble delivers humour and vulnerability in equal measure. Moreover, the action scenes are compelling, but they never eclipse the story's emotional core.

What makes *Thunderbolts** truly special is how it balances grief, humour, and redemption without ever undermining its themes. It may be rough around the edges, but it's one of the MCU's most emotionally resonant entries. In a post-*Endgame* era, it's a messy, soulful, and surprisingly necessary addition to the franchise.

Teen dies from electrocution

OUR CORRESPONDENT,
Netrokona

A teenage boy died after being electrocuted in the Khalajuri upazila of Netrokona on Thursday night.

The incident occurred around 8:30pm in the West Para area of Mendipur village.

The deceased was identified as Sayid Hasan Naki, 17, son of Abul Bashar Talukder, a resident of the area.

According to Khalajuri Police Station Officer-in-Charge Md Mokbul Hossain, Naki went to his father's grocery shop and was electrocuted when he flipped a switch to turn on a light.

Family members and locals immediately rescued him and took him to Khalajuri Upazila Health Complex, where the doctors declared him dead.

The OC said the body was handed over to the family without autopsy.

Children beat the summer heat by wading in the cool waters of a pond near their home. Their ingenuity knows no bounds, as they have even made a makeshift raft using a banana tree. Following recent monsoons, temperatures across the country have spiked once again. The photo was taken yesterday.

Accommodation crisis grips KMCH

DIPANKAR ROY, Khulna

Amid the ongoing intense heat wave gripping the region, Khulna Medical College Hospital is struggling to accommodate the rising daily influx of patients suffering from heat-related illnesses, overwhelming the hospital's capacity.

With no beds available, a significant number of patients, including the elderly and children, are being compelled to lie on the hospital floors, while the lack of functional ceiling fans or proper ventilation in many wards compounds their suffering.

In some areas, not even a single ceiling fan is available, leaving patients gasping for air as temperatures soar above 35 degrees Celsius.

Patients' families and attendants plead for immediate intervention from the authorities concerned to mitigate the suffering by providing at least temporary fans, extra beds, and emergency cooling measures.

Health experts have warned that prolonged exposure to such extreme conditions could worsen the health of many patients and

have urged the authorities to take immediate action.

Lima Debnath, a resident of Bajipur village under Jashore's Monirampur upazila, was admitted to KMCH a few days ago after being diagnosed with typhoid. However, due

most of the time. There is no vacant bed in the hospital now, so we are forced to keep her on the floor. The heat is unbearable, worsening her condition. There is no fan on this floor, so I have been trying to keep her cool using a hand fan."

to a shortage of beds, Lima is being treated on the floor of the pathology department's corridor.

Her aunt, Shikha Debnath, said, "Lima's condition is very critical. She remains unconscious

"Mosquitoes make the situation worse. We had put up a mosquito net, but it blocks what little air there is. Even a healthy person would fall ill here. We cannot afford to buy a fan," she added.

At another corner of the same corridor, Taslima Begum, a patient suffering from a liver ailment who came from Narail's Kalia upazila, was seen enduring a similar situation. Her son, Tofayel Ahmed, was seen using a hand fan to ease her discomfort.

"It's suffocating here amid this heat. I can hardly breathe," Taslima said.

"I purchased a table fan since there is no ceiling fan here, but I couldn't get it connected to any electrical outlet. Many others are facing similar issues. If the hospital authorities could install some ceiling fans, it would be a great relief to the patients," said Tofayel.

Hospital authorities admitted the crisis but said they are facing a shortage of resources.

Dr Sudipta Biswas, medical officer of Medicine Unit-3 at KMCH, said, "Due to a severe bed shortage, many are being treated in corridors, near the lifts, and other open spaces. The heat, coupled with poor ventilation, worsens conditions for patients with respiratory issues, strokes, heart attacks, and other critical illnesses. Children and the elderly are especially vulnerable."

"Despite the challenges, we are trying our best to provide treatment," he added.

He also advised patients to avoid eating food from outside during their hospital stay to prevent diarrhoea and other related complications.

Despite being a 500 bed facility, KMCH often has to accommodate three times more patients than its capacity. Around 1,400 to 1,500 admitted patients received treatment at the hospital daily in April and May.

There is also a shortage of doctors. At present, there are only 268 doctors serving at the hospital against 311 approved posts.

Dr Md Akhtaruzzaman, superintendent and deputy director of KMCH, said, "We are providing treatment amid severe limitations. Patients from 10 districts of the Khulna division and neighbouring areas come for treatment here, overwhelming the limited infrastructure."

"Despite a shortage of doctors and an overload of patients, we are doing our best to provide services with sincerity and dedication," he added.

Unregulated tourism threatens

FROM PAGE 3
20 km/hr speed limit on the Sreemangal-Kamalganj road running through the park, he also said.

"Excessive tourist activities will never do any good for Lawachara; it will only cause serious damage to its endangered wildlife and natural forest ecosystem," said Muntasir Akash, assistant professor of Zoology at Dhaka University.

The Forest Department has put a cap on how many tourists will enter daily. Otherwise, one day there will be no wildlife in this forest," he added.

Satir Ali, a tourist from Dhaka, said, "I came to Lawachara with my family to see wildlife. However, we came out of the park soon after entering as it is too crowded noisy, so much so that it hardly seems a forest. If I had known about such

a situation beforehand, I would not have come."

"In almost every country in the world, even in our neighbouring India, Nepal, and Bhutan, the canning capacity -- the optimal number of tourists that can be allowed to a site daily -- is determined based on the size and importance of the national park. Based on the number determined, that many tourists have to book their entry in advance on a particular day," said Marjan Maria, a wildlife researcher and animal care co-ordinator at Plumploris e.V.

Echoing her, Hassan Al Razi, a Ph.D Fellow (wildlife research and conservation) at University of Western Australia, said no such system has been seen anywhere in Bangladesh.

"Higher tourist numbers mean higher revenue, which

is seen very positively in our country, even though it endangers our forests and wildlife. We need to determine the canning capacity of our forests to save the forests and wildlife from the pressure of tourism. A policy should be made so that tourists cannot go everywhere. Also, tourist guards should be trained to serve as forest and wildlife conservators," he added.

Contacted, Dr Md Jahangir Alam, divisional forest officer of the Wildlife Management and Nature Conservation Department in Sylhet, admitted the crisis.

"A huge number of tourists visit the park almost every day during Eid holidays, threatening its biodiversity. We have discussed the matter in some meetings. Steps will be taken in this regard," he added.

Jhumur Akter, filed a case with Banani Police Station on February 4.

CID also discovered that another group of 10 victims is currently stranded in Saudi Arabia.

After learning about the forced recruitment, they refused to go to Russia. The traffickers then took away their passports, leaving them unable to work or return home.

CID said Fabia's brother, Tuhin -- now in Russia -- played a key role in persuading the victims to join the war.

CID is working with the government and NGOs to repatriate the victims, the official added.

Based on his information, Aminul's wife,

Vanishing rivers of Patgram

FROM PAGE 3

According to insiders, syndicate members colluded with local authorities by paying the officials around 10 percent of their daily earnings from stone extraction operations.

On average, about 4,000 cubic feet of stones are lifted daily using dredgers, with each cft selling for Tk 60-70 at the extraction site, thereby producing a daily turnover of at least Tk 2.4 lakh. Of this, roughly Tk 24,000 is allegedly pocketed by local officials, according to political insiders and syndicate sources.

However, not all 400-500 dredgers in operation are paying the cut. In some areas, influential political leaders reportedly shield their favoured groups, allowing them to bypass such payments.

"Earlier, leaders from the then ruling Awami League controlled the business. Now, local BNP leaders have taken over," said a local source involved with the syndicate, requesting anonymity.

Rashedul Islam, general secretary of Patgram upazila Juba League unit and former municipality mayor, was allegedly overseeing the syndicate's operations at one stage, the source claimed.

Rashedul could not be reached for comment, as his phone was found switched off.

Asked about BNP's alleged involvement, Shafikar Rahman, president of Patgram upazila BNP unit, refuted the allegation.

"None of our leaders are involved in this syndicate.

In fact, we have consistently urged the administration to take action against illegal stone lifting during law-and-order committee meetings.

But the administration ignored our concerns and instead shifted the blame onto political leaders while continuing to receive a share of the profits from syndicate members," he claimed.

WHAT OFFICIALS SAY

Officials concerned of the government institutions admitted that the crisis is severe.

"The three rivers in Patgram are on the verge of death due to relentless, illegal stone lifting," said Shunil Kumar, executive engineer of Bangladesh Water Development Board in Lalmonirhat.

Despite the legal framework, enforcement has remained sporadic and inconsistent, resulting in a slow collapse of rivers, livelihoods, and lives.

Between January to April this year, the local administration has filed six cases and arrested two over illegal stone mining.

The situation, however, hardly changed, as these actions appear to have little effect in preventing the mining.

"They still extract at night," said Moslem Uddin, 65, of Banglana.

"Sometimes it goes on all day -- with loud music and scenes like parties. These greedy men have ruined the rivers. The damage is evident -- in farming, nature, and even the climate."

Shafiqul Islam, president of Lalmonirhat River Rokkha Songram Parishad, echoed him.

"If urgent, sustained action is not taken, the rivers of Patgram may soon be beyond saving," he said.

Residents suffer

FROM PAGE 4

Sometimes, patient's condition worsens after such a bumpy ride," said Md Alomgir Hossain, a resident of Hospital Road.

Md Amirul Islam, a trader at Pabna BSCIC, echoed him.

Roads in Radhanagar, Shalgarh, and Aripur areas were also seen in deplorable state.

"Accidents regularly happen on the roads across the municipality as vehicles often overturn due to deep potholes. One needs to start keeping considerable time in hand to reach destination timely," said ABM Fazlur Rahman, president of Consumer Association of Bangladesh.

He urged the municipality authorities for prompt steps to repair the roads.

Md Obaidul Haque, assistant engineer of Pabna Municipality, said more than 130 km out of total 240 km roads within municipality area need urgent repairs.

"Due to the lack of fund, we are unable to conduct any repair work at this moment. We have already submitted a number of project proposals to repair and upgrade more than 100 km road at cost of Tk 100 crore. A few of those got approval. Once fund is allocated, we will begin tender process after June," he added.

Stepmother

FROM PAGE 4

Abdur Razzak told this correspondent that the family had tried various forms of treatment -- both medical and traditional -- but nothing had helped. "We were making arrangements to send him to Pabna today [yesterday]," he said.

Mostafizur Rahman, investigation officer of Patuakhali Sadar Police Station, said police recovered the bodies

and were preparing to send them to Patuakhali Medical College Hospital morgue for autopsy. "Efforts are underway to arrest the accused. Legal action will be taken upon investigation," he said.

Superintendent of Police Anwar Zahid said, "The family has informed us that Al Amin had long-term mental health issues. We are investigating the matter and trying to bring the accused to justice."

Erosion threatens

FROM PAGE 4

Locals warned that without immediate protection measures, the embankment would not only fail to serve its purpose but would also result in a waste of government resources if damaged by future tidal waves.

Nusaeir Hossain, executive engineer of the Bangladesh Water Development Board (BWDB) in Pirojpur, acknowledged that the embankment lacks

sufficient protection due to a funding shortage.

"We have asked the contractor to replace the displaced geo bags," he said, adding that a proposal seeking Tk 24 crore has been sent to higher authorities for reinforcing the embankment with concrete blocks.

"If our proposal is approved, we'll be able to begin work to strengthen the embankment," he added.

for oceanographic and hydrographic data collection, which is being procured for the Bangladesh Navy.

The UK team explained the ship's capabilities and various operational roles. Prof Yunus expressed interest in how the vessel could strengthen Bangladesh's capacity to map, survey, and collect data from its waters to support science, research, and knowledge building.

Both leaders expressed deep concern over the educational plight of Rohingya children residing in Bangladesh's refugee camps. With more than half a million children lacking access to formal education, they stressed the importance of providing learning opportunities to prevent a "lost generation".

"We must ensure that Rohingya children grow up with hope and the tools to build a better future," said Prof Yunus, reiterating the government's commitment to supporting the Rohingya community.

Brown expressed interest in collaborating with Bangladesh to expand education programmes in the camps and said he hoped to visit Bangladesh in the coming months to assess the situation and explore ways to help.

The conversation also covered other topics of mutual interest, including the interim government's reform agenda and its role in ensuring a peaceful democratic transition.

Yesterday, Prof Yunus also attended an interactive session with students at his hotel in London.

He is scheduled to return home today after a four-day visit to the UK.

Nani's salt

ILLUSTRATION: AMREETA LETHE

But even in her silence, she made a promise. Her daughters would not inherit this. They would not live with hearts clenched in smoky kitchens. They would not measure their worth in teaspoons of salt.

LAZEENA MUNA
"Amar moto sarata jibon ranna ghore kati na."

Her voice, thin as a whisper, sharp as a blade, sliced through the kitchen air thick with mustard oil and regret. The words echoed, bouncing off stained walls and copper pots that had borne witness to her life. My nani, Morium Nesa, stood stooped over a boiling pot of dal, her saree wrapped tightly around her frail 4-foot-8-inch frame. The smoke curled around her like a noose. But she kept stirring. Stirring was what she knew—what she had been taught to do. Stir the pot, smooth the tempers, swallow the rage.

In the early days of her marriage, my nani held on to the fragile hope of a good life—stitched together with respect, perhaps a little love, maybe a few sweet words under the soft glow of an oil lamp. But promises, like salt in warm water, tend to disappear, leaving only a bitter aftertaste.

The marriage wasn't heaven. It wasn't even earth. It was a battlefield. The daily routines—children, chores, the ceaseless labour of keeping a home—clashed with a sharp mind

that knew it was meant for more. But what wore her down was not the work. It was the anger, rage that sparked over trifles by her husband. The salt in the curry was never right. Too much. Or too little. On such days, her husband's plates didn't stay on the table. They flew crashing into gardens, walls, verandas, wherever the fury flung them.

My grandmother, cheeks streaked with silent tears, would cradle her father's photo, her last anchor to the idea of safety, and cry. Not loudly. Loudness was reserved for men. Her sorrow came quietly, slipping through the cracks of the house, curling into her daughters' ears. Women's grief, in her time, was meant to be swallowed. Like bitter medicine. Endured, not expressed.

But even in her silence, she made a promise. Her daughters would not inherit this. They would not live with hearts clenched in smoky kitchens. They would not measure their worth in teaspoons of salt.

"Not you," she told them. "Not your lives. Not your world."

Her daughters didn't just learn to read. They learned to unlearn. To unlearn the inherited

hush passed down like heirloom jewelry: silent, glittering, and suffocating. They unlearned that a woman's value lived in the softness of her rice, or the approval of a man too tired or too entitled to see her.

My grandmother made sure of it. She didn't just raise daughters. She raised defiance.

Her daughters didn't just learn to read, they learned to unlearn. To unlearn the inherited hush passed down like heirloom jewelry: silent, glittering, suffocating. They unlearned the idea that a woman's worth was measured by the softness of her chal and daal or the approval of a man too tired or too entitled to see her. My grandmother made sure of that. She didn't just raise daughters; she raised defiance. She told them: study. Dream. Break the script. Write your own. A life beyond the kitchen, beyond kitchen and obedience, beyond survival—one made of choice, stitched with dignity.

She never saw education as something to be folded into a dowry list, tucked between Benarasi silks and kansa thalas, one more bharis of gold to sweeten the marriage bargain. It wasn't a clever line on a biodata, recited between sips of syrupy tea, clinks of china and brittle smiles: "The girl knows English." "She can help with homework." "She'll raise clever children". All this murmured, as the matchmaker painted futures where daughters became mothers in someone else's house, their learning neatly domesticated.

Not for her girls.

To her, education wasn't a decoration to be admired on the wedding morning, like a turmeric-scrubbed glow. It was something else entirely. Education was the thing no one could take. It was the seed planted in the spine. It was voice, and walk, and the courage to look up. It was how her daughters would learn to name themselves, to write their own futures, to walk streets their mothers only passed in stories. It was not an offering. It was a possession.

Not a bridal ornament, but an inheritance, meant to be kept, carried, and passed on like fire.

POETRY

Mosaicked wounds

OHONA ANJUM

This was the way it ended: not with fire, But carried quietly under sleep-beds, Toward the rubble-heads, the hollow men's republic.

A vastness aches to be out Like a falcon stoop towards the ground For the first time in its life. Then, days spin across my oceans Sinking tiny bottles of time Lived, Loved, and Buried. Adieu! I said to them, For there is a long travel ahead. I gently push them down. For it is not a time to ponder, The falcon must not hit the ground, There is yet so much flying to do, There is yet so much dying to see. Let the tinted glasses, stack together In beloved red, black and green. They must not let go of their corks Of Sight, Sound, Touch they carry. These sealed away wounds, cling better than the mosaicked walls. Must not be painted into my common breath. Until my ocean thickens to ink and acid rain, Until the bottles drift, drift and shatter, Until every shard becomes a lidless eye, And every eye a grave.

Ohona Anjum writes, rhymes, and studies English literature.

POETRY

The people within me

ADIBA ASAD

I am not a single name. Not a single wound. Not a single sky. I am the echo of footsteps that left, and the silence that stayed behind. A mirror shattered by many suns—each shard a memory, still burning. They passed through me like wind through broken windows. Lovers, strangers, enemies, each carrying a piece of my face, and leaving a name I no longer speak. Even the ones who no longer write, who turned into stone in the garden of time—I carry them in the curve of my hand, in the way I fold my grief like an old letter. There was a version of me that loved them. And died with them.

And I do not bury the dead. I build my home from their shadows. I am not whole. I am the map of exile, drawn with fingers that trembled. A mosaic made of borrowed light, and forgotten prayers. Do not ask me who I am. Ask the wind. Ask the Bougainvillea that returns each spring to the window of someone who no longer waits. I am everyone I have ever loved, even for a heartbeat. Even in silence. Even in ruin.

Adiba Asad is a student at Vigarunnisa Noon College. She writes to explore the hidden architecture of grief, memory, and identity, believing poetry can hold what time cannot.

Polychrome

ATIQA TANJEEEM

I made my first kite out of white paper scraps; on my 16th birthday, it came to me that they needed a pop of color. I put five of the finest highlighters I owned between each finger and dragged the nibs aimlessly, tangling and untangling the swirls over and over again. Matted strands of hair slipped past my shoulders to fall over them, and the colors peddled back to whichever corner they could find, though some scurried closer and closer. The blues and whites crashed into each other at the ends of my hair, the pinks and reds fused into the afternoon sky, the browns seeped in under my nails. I held the kite up as high as my hands would reach, and saw bits of turquoise peeking out from the center. A tinge of silver tapped away at the corner of my eyes, its glint stewing in solitude at my parched lips. I saw them push and pull, pirouetting in an uncannily human routine.

In unison, they whispered verses into my ears

The whispers froze, but I took solace in the fact that they are for me, and only me, to hear. Only I can decipher their language. Only I can press onto my palms the dewdrops they leave behind. Those edges can only taste my blood: rotten, blued or maroon. The copper on my tongue is borne of my own veins, the crescendos of magenta hum on my own vocal chords.

in a language both alien and intimate. Pokémon card sets I had bought with my lunch money, the warbly Rabindra Sangeet from my mother's old cassette tapes that used to lull me to sleep after school; stacks of Barbie CDs collecting dust beside my card sets; bootlegged Jane Austen paperbacks from the quaint bookshop near my school; a Deviser 4040 I never quite learned to strum—each syllable exploded into an erratic saffron alpona. Basalt braided through the curls falling upon my kameez—curls I once wished could have been sleek, satiny and of charcoal. Moonstones swayed in circles around unruly eyebrows, dotting the spot on my forehead where they melted into each other's embrace. The kite broke into pieces, some tearing into my corneas with their jagged edges as some glided up my bare skin with the caress of porcelain; then it all banded back together into a polychrome mosaic.

The whispers froze, but I took solace in the fact that they are for me, and only me, to hear. Only I can decipher their language. Only I can press onto my palms the dewdrops they leave behind. Those edges can only taste my blood: rotten, blued or maroon. The copper on my tongue is borne of my own veins, the crescendos of magenta hum on my own vocal chords. The ghastly lime greens are mine, as much as the midnight blues are.

They are my prison, and my home.

DHAKA SATURDAY JUNE 14, 2025, JAISHTHA 31, 1432 BS

Mixed reaction over 3-captain approach

SAMUL AREFIN KHAN

Bangladesh cricket entered a new era with the appointment of Mehidy Hasan Miraz as the new ODI skipper, resulting in three leaders in three different formats which generated mixed reactions from former players.

Bangladesh last endorsed three different captains back in 2022 when Shakib Al Hasan, Tamim Iqbal and Mahmudullah were at the helm for Tests, ODIs and T20Is respectively.

The approach didn't bear fruit at that time and Bangladesh soon had to appoint Shakib as skipper for Tests and T20Is while Tamim retained ODI captaincy only until Shakib got it back in a dramatic fashion ahead of the ODI World Cup in India in 2023.

In February last year, Bangladesh Cricket Board (BCB) handed Najmul Hossain Shanto captaincy in all three formats despite Shakib's interest to continue the role in ODI format. By that time, Shakib had already expressed his desire to quit Tests and T20Is.

However, after a few setbacks in the T20Is, Shanto expressed his reluctance in continuing with the duty in the shortest format in order to concentrate more on his batting, and the BCB opted to pick Litton Das as skipper until 2026 T20 World Cup in India and Sri Lanka.

Having different captains in different formats isn't completely new in world cricket as India recently opted for this approach.

"Three captains can have three different opinions and will try to form three different types of teams. But if someone leads in both limited overs teams, he can have his own assessment of players."

Former Bangladesh captain
Rajin Saleh

However, other major teams like Australia, South Africa, England and New Zealand have two skippers, with most of these teams preferring one skipper for red-ball format and another for white-ball format, something that Bangladesh could also go with, feels former skipper Rajin Saleh.

"I think it would be better if there were two captains in three formats," Rajin told The Daily Star yesterday. "Looking into the kind of situation in Bangladesh cricket, there might be an ego problem among the captains."

"Three captains can have three different opinions and will try to form three different types of teams. But if someone leads in both limited overs teams, he can have his own assessment of players," Rajin added.

Meanwhile, Roquibul Hassan, another former skipper, feels that this is the way to go in modern cricket as there are so many international matches nowadays and having different captains can take pressure off of one individual, both physically and mentally.

"We have to play a lot of bilateral series and tournaments in different formats these days. Apart from that, the players also go to franchise leagues," said Roquibul. "People not only get tired physically, they also get tired mentally. Since we are still an underdog, the pressure such on technical, mental and physical aspects of the game is immense."

"If the responsibility remains on one man's shoulder, it becomes difficult for him to cope with the situations," opined Roquibul.

South Africa opener Aiden Markram scored a tremendous century -- an unbeaten 102 -- and put together an unbroken 143-run stand with skipper Temba Bavuma (65 not out) on Day 3 of the World Test Championship final against title-holders Australia at Lord's yesterday to propel the Proteas to the verge of claiming their first ICC title since 1998 when they won the ICC Knockout Trophy. South Africa finished the day at 213 for two, 69 runs shy of chasing down a 282-run target set by Australia.

Miraz's peculiar first day as ODI captain

SPORTS REPORTER

Less than 24 hours after Najmul Hossain Shanto had spoken about the importance of long-term captaincy during a press conference at the BCB headquarters, Mehidy Hasan Miraz on Friday sat in the same room for his first media interaction since replacing Shanto as skipper in ODIs.

The decision to appoint Miraz as captain was taken on Thursday evening after an emergency Zoom meeting between BCB board directors and the all-rounder will begin his year-long tenure with the three-match ODI series in Sri Lanka this month.

Shanto had reportedly been left in the dark about the development and was unaware that his ODI tenure would be coming to an end when he spoke to the media on Thursday as the Test skipper before the side's departure for Sri Lanka.

The left-hander was reportedly in talks with head coach Phil Simmons on Thursday about the ODI series when he learnt he is not the captain anymore.

The unusual manner of Shanto losing his captaincy has roused more interest than who he has lost it to and it was reflected in Miraz's first press conference, as the new captain had to field more questions related to Shanto than what he intended to do as skipper in ODIs.

"He [Shanto] was the ODI captain for a term, which had ended [after the Champions Trophy]. They probably had conversations about the Test team. I am not sure if they spoke about the ODI

team," Miraz said at the press conference yesterday about captaining a squad in Sri Lanka which was picked when Shanto was in charge.

"Fahim [Nazmul Abedeen] sir called me and said that they are going to give me the responsibility. He said that they don't have much time since we have to set up the ODI team quickly as the matches are not far away," he added.

The board's heavy-handed handling of the matter risks ruining the dressing room environment. But Miraz negated that possibility.

"I don't think it will have an effect in the dressing room. We are all playing for the country. These things won't bother Shanto and me. I helped him a lot during his captaincy. He will do the same. He will help me. We want to take Bangladesh forward," he said.

The captaincy change has laid bare that proper processes are not being followed in the board and is also a

reflection of the instability that has crept in everywhere in cricket.

But Miraz said he and the other players are now prepared for any eventuality and also corroborated what Shanto had said about long-term captaincy a day before.

"I don't know how [the captaincy] was decided. It is usually done in a board meeting. Nobody can decide on their own. I think all of us are usually prepared mentally for any situation we may have to face."

"Longer term captaincy is always ideal, but I think it is up to the board [whether or not to extend his tenure till 2027 World Cup]. The thinking is to get the team out of the current struggle," he said in a peculiar first day as captain.

Real sign River Plate starlet Mastantuono

AFP, Madrid

Real Madrid have agreed a deal to sign teenage playmaker Franco Mastantuono from River Plate, the Spanish giants announced on Friday.

The 17-year-old attacking midfielder cost Madrid just over 63 million euros (\$72 million), according to a statement by River Plate.

Mastantuono will play in the Club World Cup in the United States this summer with the Argentine club before moving to the Spanish capital.

"Mastantuono will be a player at our club for the next six seasons, from 14 August 2025 to 30 June 2031," said Los Blancos in a statement.

"At 17, he is also the youngest player to play an official match for the Argentina national team."

He made his national team debut earlier this month against Chile in a World Cup 2026 qualifier.

"Mastantuono executed his release fee clause, along with Real Madrid," explained River Plate, providing full financial details of the deal which earns them 45 million euros, with the rest of the money largely distributed on taxes.

"Thank you Franco for your performance and talent, it has been a pride to see you grow at the club," the statement continued.

The midfielder came through the River academy and made his first team debut for the club in January 2024.

He is Real Madrid's third signing this summer behind Trent Alexander-Arnold from Liverpool and Dean Huijsen from Bournemouth.

Taskin uncertain for SL white-ball series

SPORTS REPORTER

Bangladesh are unlikely to get the services of pacer Taskin Ahmed in the limited-over part of their upcoming full tour of Sri Lanka, as according to a Bangladesh Cricket Board (BCB) physician, the board will only review his case after this month.

Taskin, who has been out of competitive cricket since March, is currently undergoing conservative treatment during his rehab, after he had issues with his Achilles tendon, for which he also had gone to London to receive expert opinions.

Bangladesh are set to play three ODIs and as many T20Is following their two-match Test series against Sri Lanka. The ODIs will begin on July 2, and according to BCB's chief physician, Debasish Chowdhury, it might take longer than expected for his comeback.

"Taskin wasn't in a situation to play Tests," Debasish told The Daily Star yesterday. "His rehab is ongoing. But we aren't sure whether he can make it to the side within this time. We will be assessing his rehab until the end of this month. Then we will review his case."

Meanwhile, Debasish was confident about the recovery of the other two pacers -- Shoriful Islam and Mustafizur Rahman -- before the series. While Shoriful missed the last T20I against Pakistan due to a muscle spasm he suffered in the previous game of the series last month, Mustafizur was sidelined for the entire three-match series due to a finger injury he picked up during his Indian Premier League stint.

"Shoriful has started bowling. There are no complaints about his injury," Debasish said.

"Mustafizur would have taken 21 days to regain his fitness, and 15 days have already passed. So, we expect him to recover within the time frame," he added.

Messi gears up for CWC opener

Egyptian Premier League champions Al Ahly head to the Hard Rock Stadium in Miami Gardens, Florida to face Major League Soccer side Inter Miami in the opening match of the 2025 FIFA Club World Cup. The match will be live telecast at 6:00 pm on Sunday Bangladeshi time. Lionel Messi-led Miami also stars big names like Luis Suarez, Sergio Busquets, and Jordi Alba but they face not only Egypt's finest but also the best side in the African continent.

• Messi will play in his fourth FIFA Club World Cup, including the previous format of the competition. He's won the trophy in all three of his previous participations (2009, 2011 and 2015), scoring five goals in five appearances, including goals in all three finals.

• Al Ahly have won more Egyptian top-flight titles (44) and more CAF Champions League titles (12) than any other club.

• Al Ahly's Hussein El Shahat holds the record for the most matches played under the previous format of the FIFA Club World Cup (17).

• FIFA slashed ticket prices to encourage fans to come to the tournament opener after thousands of seats remained unsold last week, with prices being as low as \$4. Miami Dade College students have gotten offers for five seats to the opener for \$20, breaking down to just \$4 per ticket to see Messi's Inter Miami squad.

Liverpool agree British-record deal for Wirtz

AGENCIES

Liverpool have agreed a British record deal worth up to £116.5 million to sign German attacking midfielder Florian Wirtz from Bayer Leverkusen, marking a bold statement of intent ahead of Arne Slot's second season in charge.

The 22-year-old, widely regarded as one of Europe's most exciting young talents, will join the Premier League champions after returning from holiday to complete his medical. The Reds will pay an initial £100 million, with £16.5 million in performance-related add-ons potentially making it the most expensive deal in British football history -- surpassing Chelsea's fee for Moises Caicedo (£115 million to Brighton in 2023).

Wirtz's arrival follows that of former Leverkusen teammate Jeremie Frimpong, who signed earlier this summer for £29.5 million. Liverpool are also close to sealing a deal for Bournemouth left-back Milos Kerkez as Slot seeks to reinforce every area of the pitch.

After staying relatively quiet in the transfer market during his debut

campaign, Slot guided Liverpool to their 20th English top-flight title, equalling Manchester United's record. Now, the Dutch manager is focused on building a squad capable of defending the crown and also push for continental glory.

Liverpool left-back Andy Robertson had described Wirtz as an "exciting talent".

Robertson played against Wirtz when Liverpool faced Leverkusen in the Champions League this past season, but says he realised the playmaker was headed for stardom when Germany beat Scotland 5-1 at Euro 2024.

"He was excellent against us," Robertson told Sky Sports News at the AR26 annual Captain's Cup Golf Day fundraiser before the signing was confirmed. "That was enough for me to see he's going to be a top player. He will be an exciting talent."

Wirtz scored 10 goals and provided 13 assists in 31 Bundesliga appearances last season and was crowned Bundesliga Player of the Year in 2023/24. His versatility gives Slot additional options in an already competitive forward line featuring Mohamed Salah, Luis Diaz, Cody Gakpo, Diogo Jota, and Darwin Nunez.

No communal,
political motive
behind attack
on Kachharibari
Says cultural affairs
ministry

STAFF CORRESPONDENT

The Ministry of Cultural Affairs yesterday said that there is "no communal or political motive behind the attack" at the Rabindra Kachharibari in Shahjadpur, Sirajganj, and that the incident stemmed from a personal conflict.

In an official statement, the ministry detailed the sequence of events surrounding the altercation that took place at the site on June 8.

According to the ministry, the dispute began with a misunderstanding that led to an argument and later a physical fight between an on-duty employee of the Kachharibari and a visitor named Shahnewaz.

Allegations were brought against custodian Habibur Rahman of the Department of Archaeology for allegedly assaulting and detaining the visitor.

Archaeologists uncover fast food ancient Romans munched on

INDEPENDENT.CO.UK

Commoners in the Roman Empire frequently snacked on inexpensive fried songbirds at roadside shops, archaeologists said after analysing an ancient trash pit in Spain.

Such fast-food joints, known as popinae and tabernae, frequently served fried small thrushes, once considered a luxury dish, according to a new study published in the International Journal of Osteoarchaeology.

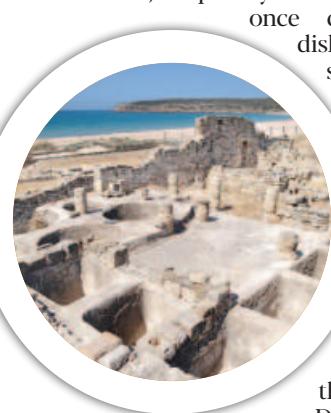

Researchers analysed animal bones found at a cesspit in the ancient Spanish city of Pollentia and dated to between the first century BC and the first century AD.

During this time, the ancient city expanded quickly to become an active port with a forum, temples, cemeteries, and several roadside shops called popinae serving snacks and wine.

Archaeologists excavated a trash pit at a commercial area linked to a forum and a network of food shops via underground drainage.

The cesspit was found to include remains of mammals, fish, reptiles, and birds, of which thrushes were "most abundant", researchers said.

They found 165 thrush bones, challenging the previous belief that such songbirds were mainly eaten by wealthier Romans.

Chhatra Dal leader stabbed to death

OUR CORRESPONDENT,
Mymensingh

A local Chhatra Dal leader was stabbed to death in Sohanati village of Gauripur upazila in Mymensingh yesterday.

Humayun Kabir, 21, was the joint general secretary of Chhatra Dal's Sohanati union unit.

Quoting locals, Gauripur Police Station Officer-in-Charge Didarul Islam said Humayun had reportedly warned a suspected drug dealer against selling narcotics. "This may have provoked a planned attack on him."

Protesting the murder that took place around 5:45pm, a group of agitators set fire to several houses in the area.

Fire service personnel and police rushed to the scene and brought the situation under control.

Gauripur Upazila Chhatra Dal Member Secretary Md Moniruzzaman Manik said, "The murder happened over previous enmity."

He called for the immediate arrest of those responsible.

OC Didarul said police are trying to arrest the perpetrators.

UNGA demands immediate truce in Gaza

US, Israel oppose; Israeli strikes kill 52 Palestinians

AGENCIES

Israeli attacks have killed at least 52 people across Gaza since dawn yesterday, medical sources told Al Jazeera, as the United Nations General Assembly (UNGA) passed a resolution urging an unconditional ceasefire in the besieged enclave.

The 193-member

General Assembly adopted a resolution that also demands the release of hostages held in Gaza by Hamas, the return of Palestinian prisoners detained by Israel and the full withdrawal of Israeli forces from Gaza.

The text garnered 149 votes in favor, while 19 countries abstained and the US, Israel and 10 others voted against, reports Reuters.

In Gaza, most of the people died in Israeli drone attacks while waiting for food and basic supplies being distributed by the controversial United States and Israel-backed Gaza Humanitarian Foundation (GHF).

Gaza civil defence official Mohammed el-Mougher told AFP news agency that al-Awda Hospital received at least 10 bodies and about dozens of others who were wounded after Israeli drones dropped multiple bombs on gatherings of civilians near an aid distribution point around the Netzarim checkpoint in central Gaza.

El-Mougher said that Gaza City's al-Shifa Hospital also received six bodies after Israeli

attacks on aid queues near Netzarim and in the as-Sudaniya area in northwestern Gaza.

Since the GHF began its operation in Gaza in late May, dozens of Palestinians have been killed while trying to reach the aid distribution points, according to Gaza's civil defence agency.

GHF has been a failure from a humanitarian standpoint of view, the United Nations said yesterday.

"GHF, I think it's fair to say, has been, from a principled humanitarian standpoint, a failure," Jens Laerke, spokesman for the UN humanitarian agency OCHA, told a press briefing in Geneva.

Separately, a medical source at al-Shifa Hospital told Al Jazeera that two Palestinians were killed as a result of Israeli shelling targeting the Bir an-Naaja area west of Jabalia refugee camp in northern Gaza.

Meanwhile, Hamas condemned what it described as an Israeli decision to cut off communication lines in Gaza, describing it as "a new aggressive step" in the country's "war of extermination".

"We call on the international community to assume its responsibility to stop the aggression and ensure the protection of civilians and humanitarian and civilian facilities."

The disruption of communications has resulted in the UNRWA losing contact with its colleagues in the agency in Gaza, the UN's main humanitarian provider in Gaza said.

35 pushed in through three border districts

STAR REPORT

At least 35 people were pushed into Bangladesh from India through different border points in Dinajpur and Panchagarh in the early hours of yesterday.

In Dinajpur, 15 people, including three men, three women and nine children, were detained near the Achintopur border area in Birampur upazila around 6:30am.

After detaining them, the Border Guard Bangladesh (BGB) 29 members took them to the Achintopur Border Outpost (BOP), reports BSS.

India's Border Security Force (BSF) forcibly pushed them back into Bangladesh through border pillar 295/1-S on Thursday night, said Rafiqul Islam, commandant of Achintopur BOP, quoting the returnees.

"The process of handing over the arrestees to Birampur Police Station for further legal action is underway."

In Panchagarh, seven individuals, including two men, three women, and two children, were detained near the Amarkhana border in Sadar upazila yesterday.

Members of the Amarkhana BOP detained the individuals near pillar no.743/1-S after they were pushed across the border, Lt Col Sheikh Mohammad Bodruddoza,

INDO-PAK TENSIONS Trump vows to bring rivals together

AFP, Washington

US President Donald Trump insisted Thursday he would bring India and Pakistan to the table together after recent fighting, saying he can "solve anything."

US diplomacy last month helped bring a ceasefire that ended four days of fighting between the nuclear-armed adversaries triggered by an attack on civilians in the Indian part of divided Kashmir.

Secretary of State Marco Rubio said in announcing the ceasefire that the two nations had agreed to "start talks on a broad set of issues at a neutral site."

The statement was welcomed by Pakistan, which has long sought an international role over Kashmir, but India -- which has a warm relationship with the United States -- was more circumspect.

Asked whether there remained plans for talks between India and Pakistan a month after the ceasefire, Trump said: "We're going to get those two getting together, you know?"

Once a vital waterway, the Shubhadra Canal in South Keraniganj has long struggled against pollution and encroachment. Despite repeated restoration pledges, including one last month by Environment Adviser Syeda Rizwana Hasan, waste continues to choke its waters. The photo was taken yesterday near the Purba Aganagar Jora Bridge.

Teen driver sued for Ctg hit-and-run

STAFF CORRESPONDENT, Ctg

An uncle of the boy who was run over and killed in Chattogram's Halishahar filed a case against the 19-year-old driver yesterday.

Tanim Hossain Rabbi, a student of Chattogram Government Commerce College, has been accused of reckless driving and killing a boy who was knocked off a bike in a hit-and-run.

Rabbit doesn't have a driver's licence and was driving his father's car on Wednesday afternoon when he hit the bike and tried to speed away, locals and police said.

Osman Gani Sakib, who worked as a caretaker of a residential building in the area, died on the spot.

The victim's relative filed a case under Section 105 of the Road Transport Act 2018. Police sent the accused to the court and seized the vehicle," said Mohammad Moniruzzaman, officer-in-charge of Halishahar Police Station.

Sub-Inspector Abu Sayeed, who is investigating the case, said, "We

Where birds still find REFUGE

Chasing hope through
Bangladesh's vanishing wetlands

Across the country, from inland floodplains to coastal mudflats, these fragile ecosystems are being drained, encroached upon, or slowly suffocated by pollution. The quiet disappearance of its wetlands may be its most dangerous, yet least visible, crisis.

SAYAM U CHOWDHURY

The sky hung low over Dhaka, wrapped in winter smog that blurred the sun and muffled the city's sounds. A heavy silence lingered as we made our way through the chaos of Sadarghat, boarding an overnight ferry bound for the coast. We were escaping the choking haze in search of open skies and tidal wetlands – places where migratory birds still gather each winter, undisturbed by the steel and concrete of city life.

As daylight faded, we climbed to the ferry's roof, eyes scanning the banks of the Buriganga. Life stirred along its edge – dim, fleeting shapes, the kind you only catch at dusk. Gulls and kites circled overhead, graceful scavengers gliding through the gloom. They dipped low, feeding on whatever surfaced in the thick, murky water below.

The Buriganga moved sluggishly beneath us, more sludge than river. Plastic waste clung to its surface, forming dense patches that drifted like islands. The water, dark as oil, had long ceased to flow with vitality. Once the lifeline of Dhaka, the Buriganga was the city's main water source when the Mughals declared it their capital in 1610. Now, it felt more like a grave – a slow-moving sarcophagus of a river.

I found myself wondering what, if anything, still lived beneath that opaque surface. The image brought to mind the poisoned rivers of

yet least visible, crisis.

The reasons are all too familiar: unplanned development, expansion of agriculture, the proliferation of shrimp farms, riverbank erosion, and overfishing. Even though wetlands support millions of livelihoods and offer natural buffers against flooding and climate disasters, they remain a low priority in national planning.

Among the most threatened are the seasonal riverine floodplain grasslands – dense, grassy islands that emerge along the Padma and Jamuna rivers during dry months. These habitats are critically important, harbouring rare species like the Bristled Grassbird, a bird once thought extinct in Bangladesh until recently rediscovered.

Our recent research reveals that these areas are disappearing fast. Cultivation and overgrazing are eroding their ecological integrity, and protection remains minimal to non-existent. Ironically, these habitats may be some of Bangladesh's richest ecosystems, both biologically and culturally, and yet they are among the most neglected.

Where life still clings to the tide

We arrived in Hattia at dawn, stepping off the ferry into salt-laced air and open skies. The tide had just begun to retreat, peeling away from the shoreline like a curtain. Before us stretched the vast intertidal flats – rippling

and refuel during their epic seasonal journeys. When we lose these stopovers, we don't just lose birds. We unravel entire migratory networks and the natural rhythms that bind us to them.

Degradation, pollution and coastal squeeze

While parts of the southern coast have recently come under marine protection, mounting pressures threaten to outpace conservation efforts. Tidal wetlands are being converted at alarming rates – to shrimp enclosures, salt pans, or paddy fields. These transformations often ignore ecological value in favour of short-term economic gain.

Meanwhile, the country's most visited beaches, such as Cox's Bazar, are drowning in plastic waste. Discarded bottles, packets, and fishing gear are carried by rivers from inland cities, forming a relentless conveyor belt of pollution. This detritus spills directly into delicate coastal zones, embedding itself in sand and surf. Microplastics now lace the water column and shoreline, entering food chains in ways we barely understand.

One of the most insidious threats is ghost gear – lost or abandoned fishing nets that drift silently through the water, tangling marine life in their invisible threads. Shorebirds are especially vulnerable. Their migratory nature brings them repeatedly to polluted coastlines, where plastic concentrations are highest. These environments, which once offered refuge, are now riddled with unseen dangers.

Coastal squeeze adds another layer to the crisis. As sea levels rise due to climate change, tidal wetlands should naturally migrate inland. But in many places, embankments, roads, and settlements block their path. With nowhere to go, these habitats are slowly being drowned. The result is a gradual suffocation – too subtle for headlines, yet devastating in scale.

What we risk, what we can save

This is not just about birds, or about scenic beauty. This is about survival and resilience. Wetlands are Bangladesh's first line of defence against storm surges, flash floods, and rising seas. They absorb excess water, stabilise shorelines, and nourish biodiversity. Their loss endangers not just wildlife, but human communities.

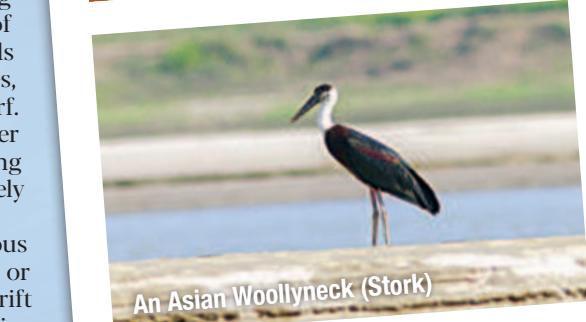

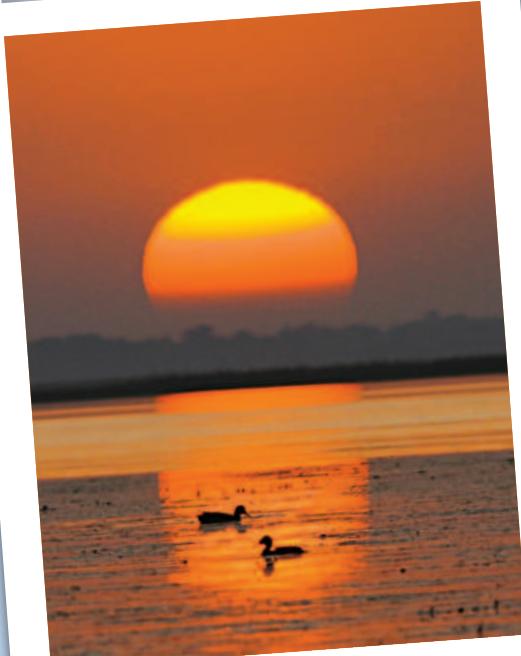

It is time to place wetlands at the core of national environmental policy – not as afterthoughts, but as critical infrastructure. This means protecting what remains, restoring what has been damaged, and recognising pollution as an environmental security threat rather than just an eyesore.

Common Coot

River Lapwing

An Asian Woollyneck (Stork)

Bar-tailed godwit

Wetland systems like Tangar Haor must be revitalised. The grabbed lands around Sonadia Island, now converted to salt farms, need to be reclaimed and returned to nature. Emerging islands like Gangurir Char, near Bhashan Char, must be brought under legal protection before they are lost to unregulated development. And the few remaining grasslands along the great rivers must be mapped, managed, and defended.

Bangladesh is a nation born of water. Its identity, economy, and culture are deeply entwined with its rivers and wetlands. To lose these spaces is to lose something fundamental.

We came to Hattia chasing birds, but what we found was something deeper: a glimpse of a fragile future – still alive, still wild, and still worth saving.

sands blending into gleaming mud, a horizon of possibility.

Then, as the morning light caught the water's edge, the birds came.

Thousands of them, sweeping in on wide wings and sharp cries. Black-tailed Godwits began probing the shallows, their long bills rhythmically piercing the mud. Farther along, Curlews dug for crabs with slow, deliberate movements. And there, weaving graceful arcs through the flats, the Pied Avocet, a personal favourite, swept its upturned bill side to side in fluid motion.

These tidal wetlands are more than just beautiful. They are vital ecological nodes along the East Asian-Australasian Flyway, the migratory route that stretches from Arctic Russia to Australasia. Endangered species like the Spoon-billed Sandpiper depend on these habitats to rest

and refuel during their epic seasonal journeys. When we lose these stopovers, we don't just lose birds. We unravel entire migratory networks and the natural rhythms that bind us to them.

The reasons are all too familiar: unplanned

Mordor from Tolkien's The Lord of the Rings, a land of decay and ruin, drained of life. It seemed like a fitting metaphor.

Yet it was this very river, forgotten and forsaken, that carried us southward – toward Hattia island, where life still clings to the tide. There, the air smells of date palm jaggery in winter, the fields still yield rice and mustard, and each year, thousands of migratory birds descend upon the vast tidal wetlands.

We were chasing birds, yes. But in truth, we were also chasing hope.

Disappearing wetlands

Wetlands, once the backbone of Bangladesh's ecology and rural economy, are vanishing. Across the country, from inland floodplains to coastal mudflats, these fragile ecosystems are being drained, encroached upon, or slowly suffocated by pollution. In a nation defined by water, the quiet disappearance of its wetlands may be its most dangerous,

and refuel during their epic seasonal journeys. When we lose these stopovers, we don't just lose birds. We unravel entire migratory networks and the natural rhythms that bind us to them.

We speak of public leadership and representation, but rarely of domestic labour protections. We critique patriarchy, but seldom the hierarchies we replicate at home. Feminism, if it is to mean anything, must make room for the women who clean our floors and carry our fevers.

CYNTHIA FARID

Jaya and Sharmin—a film produced by Jaya Ahsan—is a quiet reminder of who we were and still are, five years after the pandemic struck. In this quiet, haunting two-woman film, the pandemic is never centerstage—rather the film avoids its dramatisation. There are no sirens, no scenes of hospital chaos, no feverish handheld camera work. Instead, the film offers what most pandemic stories avoid: the internal climate of a shared household. Time slows. Fear settles. News flits across the TV, unnoticed. Through understated rhythm, the film accomplishes something powerful—it keeps the focus on the emotional, relational toll of confinement, rather than its spectacle.

This is a film about what happens when two women—one a public figure, the other a domestic worker—are confined together by circumstances within a socially stratified structure. That this is a female-led production matters. It is unmistakably shaped by women's emotional intelligence and the directorial effort is worthy of praise. This is not a "strong women" story in the Marvel Universe sense. Rather, the film shows women absorbing, enduring, witnessing, and navigating unequal

relationships—not with men, but with each other.

The film unfolds within the walls of a single home in Dhaka. Jaya, a well-known actress, moves through her days in the slow drift familiar to many of us during lockdown. She types on an old typewriter once owned by her father. She listens to BBC radio and speaks wistfully of a time when people built their mornings around the news—often as a family, as opposed to the contemporary routine of solitary consumption of social media.

As these women navigate the Pandemic-induced confinement, their days repeat. So do their meals. Their silences through walks to the rooftop or looking out the verandah—spaces where the sky is the only reminder of an outside world—have been visualised by the Director with great affect.

Sharmin, the house help, cooks, cleans, answers the phone, and listens. She is, like so many domestic workers in South Asia, physically proximate but emotionally peripheral. The pandemic may have blurred class lines for some,

but not here. In this house, caregiving is constant and unequally valued.

IN THE SILENCE BETWEEN THEM

What Jaya and Sharmin Says About Women, Labour, and Care

but not here. In this house, caregiving is constant and unequally valued.

The film resists melodrama. There are no monologues. No climaxes. Just accumulation—of days, gestures, absences, and unmet glances. Emotional tension builds not through confrontation but through withholding. This is a film that asks us to look not at what is said, but to comprehend the silences and emotions.

At its heart, the film showcases the asymmetries of care and vulnerabilities. Sharmin is expected to serve, absorb, and remain silent—even when the emotional temperature of the house spikes. At moments, Jaya reaches out—but her concern, though sincere, is shaped by the same structures that keep Sharmin at the margins. Even when care is offered, the terms are not equal.

There is a brief reversal when Sharmin becomes unwell, and Jaya takes on the caregiving role. But the structural lines never blur. Even in vulnerability, Sharmin insists on keeping her employer safe. It is a scene that reflects a deeper truth: domestic workers are expected to carry both emotional and physical labor.

One of the most powerful choices in the film is Sharmin's eventual exit (spoiler alert!). There is no confrontation, no moral arc, no sentimental music. She simply leaves—quietly, deliberately, without being told she is safe from the disease or asked to stay. In a film where movement is constrained, her departure becomes the only unscripted act—an assertion of dignity in a space where she was never fully seen.

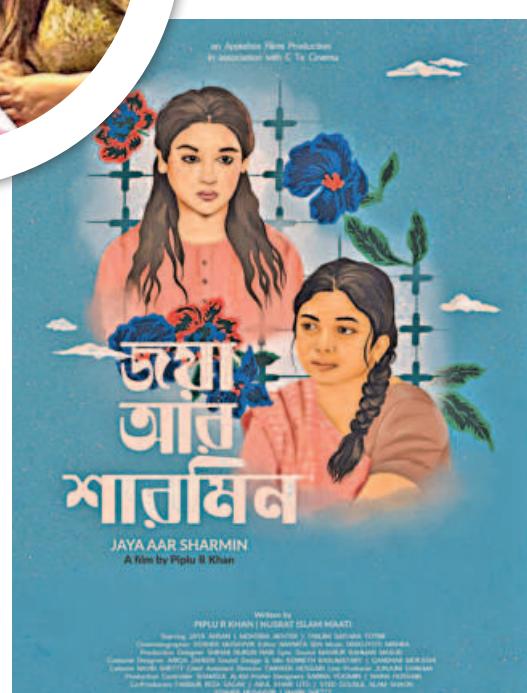

This is where Jaya and Sharmin becomes a mirror—of our classed households, of the

emotional economies some women sustain without acknowledgement, of the silences that define both domestic work and middle class fragility. In Bangladesh today, as debates are raging around women's rights, this film quietly but sharply re-centers a truth we often sidestep, that many "empowerment" narratives ignore social stratification. We speak of public leadership and representation, but rarely of domestic labour protections. We critique patriarchy, but seldom the hierarchies we replicate at home. Feminism, if it is to mean anything, must make room for the women who clean our floors and carry our fevers.

The film does not preach. It opens up space for reflection—on the inequalities inside our households, on the distance between care and recognition, and on the emotional toll of being near someone without ever being fully allowed to matter. The pandemic may have locked everyone in, but it did not flatten the hierarchy inside the house. At a moment when so much public discourse is being reduced to slogans, this film dares to say less—and in that restraint, it says everything.

WHERE FOLK MEMORY LIVES

Inside Kurigram's Bhawaiya Museum

Bhupati Bhusan Barma, retired schoolteacher, renowned Bhawaiya singer and researcher, and founder of the Bhawaiya Academy in Ulipur.

Due to severe space constraints, Bhawaiya heritage items lie exposed and unprotected across the academy's verandas.

S DILIP ROY

In the lowlands of northern Bangladesh, where the Brahmaputra weaves its ancient path and songs echo across open fields, a quiet fight to preserve cultural memory is underway. Tucked inside a modest tin-roofed building in Kurigram's Ulipur upazila, the Bhawaiya Academy has been nurturing the roots of a rich musical and rural tradition for over three decades. What started as a community effort to teach folk music has grown into something far more ambitious: a museum of living memory.

Named the Kasim Uddin Lokoshilpo Jadughar, after the legendary Bhawaiya singer who carried the songs of the north to global audiences, the museum now shelters nearly 2,000 artefacts that once defined agrarian life in Bengal. But far from a grand institution, the collection teeters under threat, crammed into overcrowded verandas and classrooms, slowly decaying from lack of space and funding. Still, from across the country, visitors come—drawn not just by nostalgia, but by a deep desire to connect with a vanishing way of life.

More than a hundred rare tools and instruments are on display: agricultural tools like wooden ploughs, yokes, and kursi (a farming implement), bull driving sticks, korail kurals (small axes), bakuas (bamboo shoulder poles), topas (bamboo hats worn by farmers), winnowing fans (kula and jhapi), and pesta—circular head supports used to carry heavy loads.

Traditional paddy processing items such as urungen and paat are exhibited alongside fishing gear like barsi, darki, deru, palo, and chak. Baskets for storing fish like khali and jina, musical instruments like the dotara, sarinda, dhol, and banshi, and even

wooden sandals (kharam) are all preserved—many of which are mentioned by name in Bhawaiya songs, maintaining their original northern dialect.

At the heart of this endeavour is Bhupati Bhusan Barma, a retired schoolteacher from Duragpur High School in Ulipur and a celebrated Bhawaiya singer and researcher. Since 1993, Bhupati has single-handedly collected and preserved these relics of rural life. Having performed Bhawaiya across India and abroad, he envisioned a museum that would reconnect the modern generation with their roots—not just through music, but through the tangible heritage behind the melodies.

"These are not just items," he told The Daily Star. "They are reflections of our identity and history. People may hear the songs, but through these objects, they can see the life behind the lyrics."

Explaining the naming of the museum, he added, "We could do very little to honour Kasim Uddin during his lifetime. Naming the museum after him is our humble tribute to a man who gave Bhawaiya its rightful place on the world stage."

Yet despite its growing collection and cultural importance, the museum suffers from a critical limitation—lack of infrastructure. "We have no proper space," Bhupati lamented. "Artefacts are stored in classrooms and verandas. Many are damaged or at risk of being lost forever. We need a multi-storey building to preserve this heritage, but we simply don't have the funds," he said.

The Bhawaiya Academy's journey began in 1994, when then-chairman of Duragpur Union Parishad, Golap Uddin Sarkar, donated five decimals of land. With local and limited government support, a tin-roof structure was built and the academy began offering free training in five disciplines: Bhawaiya

vocals, dotara, sarinda, dhol, and bamboo flute. Bhupati and seven other volunteers conduct weekly classes every Thursday and Friday. Currently, around 40 students attend regularly, and over 2,500 have benefited from the academy over the years.

The Bhawaiya Academy has not only preserved artefacts and melodies—it has also transformed lives.

Putul Rani, now a listed Bhawaiya singer with Bangladesh Television (BTV) and Bangladesh Betar, shared how the academy shaped her journey.

"The Bhawaiya Academy gave me a new life," she told The Daily Star. "Through the training I received here, I am now a performer on both television and radio. I'm regularly invited to sing on major stages across the country."

Putul also voiced concern over the preservation of the academy's collection:

"Bhawaiya is deeply intertwined with various traditions and objects that are now disappearing. Our mentor, Bhupati Bhusan Barma, has spent years collecting them. But due to lack of space, they're left on the academy's verandas. Proper preservation is urgently needed."

Jagatpati Barma, a music instructor at the academy, emphasised the passion driving their mission. "There are eight of us who teach music here—all on a voluntary basis. We train students in Bhawaiya singing and how to play traditional Bangla instruments. We are building artists with the hope of keeping Bhawaiya alive." He added, "But preserving the instruments and heritage linked to Bhawaiya also matters. And for that, we need patronage and support."

The museum now stands as a lone guardian of a fading legacy. If given proper support, it could become a cornerstone of northern Bangladesh's cultural preservation, inspiring future generations to take pride in their roots," he said.

Even the youngest learners understand the academy's impact. Prodip Barma Tullo, a student in Class Eight, is already performing on stage. "I'm learning to play the dotara here. I've already been invited to perform at various events. I dream of becoming a renowned dotara player someday," he said, adding, "We don't have to pay any fees for training here. Many like me are learning free of cost."

Visitors to the Bhawaiya Academy often leave with a deep emotional impression—moved not just by the music, but by the cultural treasure trove that surrounds it. Shirin Khatun, a Bhawaiya singer visiting from Rangpur, was overwhelmed by what she witnessed. "I was deeply moved by the work being done at the Ulipur Bhawaiya Academy," she told The Daily Star. "The collection of heritage and traditional items here is truly historic. But it pains me to see them not properly preserved." She stressed the importance of protecting the legacy for future generations.

STEREOTYPES, STRUGGLE, AND SURVIVAL

Reclaiming the Story Behind *Mofiz*

As busloads of labourers arrived in Dhaka, they were given chits stamped with *Mofiz*. As demand for workers grew, employers began saying, "I need a *mofiz*." The chit signaled that once work was done, the labourer would be returned via the same bus. Over time, *Mofiz* became a label for char migrants as disposable labour.

SAAD QASEM

For a long time, people have made the derogatory word *mofiz* synonymous with the residents of the Rangpur region. This indignity signifies an underrating of the people of Rangpur based on poverty and poor living conditions in the northern part of Bangladesh. Today, the mention of *mofiz* commonly implies a simpleton. This buzzword layers in nation-building history which brackets in the struggles to grapple with the shackles of poverty as endemic in the country. However, the prevalence of the word *mofiz* belittles someone and assures a stereotyping of the people of the northern region spurring no introspection into the aversion embedded in the term. This neglect then flattens out the historical conditions which have marred the Rangpur region prevalent today but ongoing since the colonial period.

Trivial usage of the loaded term even gravitated to leaders in the now fallen, then ruling party. Asaduzzaman Noor, in a public rally in 2023, lauded the wave of development under the Hasina regime, recalling the difference to shoddy infrastructure under other governments in Nilphamari and other northern areas. Noor called out Ehsanul Huq Milon, a former BNP Minister for labelling people from the north as *mofiz*. Noor took credit for his party's success in developing infrastructure in the north citing the daily eighteen flights Syedpur airport as a clear example. Rather, he labelled the BNP as the only remaining *mofiz* in the country.

seasonal flooding and erosion, forcing Chardwellers to constantly rebuild, often in new chars. This constant displacement disrupts income and keeps people stuck in poverty. In the monsoon, there's no work due to widespread flooding. Most income is earned between late October and early June, and that must stretch through the monsoon. The pre-harvest period brings *monga*, a seasonal famine. Living hand-to-mouth, savings run out fast, and every year the struggle starts over. The floodplains make it hard to generate stable income.

Political crises, alongside constant flooding and erosion, continue to push Chilmari's Chardwellers deeper into poverty. During the 1974 famine, they were among the hardest hit, with Basanti's image drawing global attention. In response, seasonal migration became a key coping mechanism. Since the 1970s, many men have travelled to Dhaka around October in search of short-term work. Economic growth in the capital created opportunities in sectors like garments, construction, and rickshaw pulling, despite the risks involved. These migrants typically return by early December, as Hemanta (late autumn) ends, and the agrarian season begins along the Brahmaputra's fertile banks.

Two narratives of the term *Mofiz* circulate in Chilmari and among the char

began to see Chardwellers as simple, unsophisticated, even backward. Over time, *Mofiz* became a stereotype, used to label incoming migrants as people unfit for the pace and complexity of city life. A name born from hardship turned into a slur that reduced survival into shame.

Colonial Roots of Otherisation
British colonial records painted the chars of Chilmari as volatile spaces rife with trouble. A 1907 report

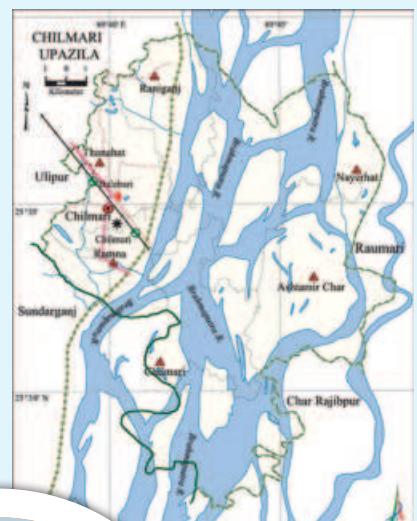

PHOTO: MOSTAFA SABUJ

described these areas as violent frontiers. Because of this, the chars became fixed in the colonial imagination as wild and dangerous lands. This perception did not disappear after colonial times but continues to affect

how people view and treat Chilmari and its residents. The British often portrayed the locals as tricky or untrustworthy. For example, a settlement officer in Rangpur noted that when asked for directions, locals often replied, "Mui Chenga Manish Babu, Mui Ki Janno," meaning "I am just a boy Sir, what do I know." The respondent was confused because river routes were complex and giving wrong information could cause trouble. Yet colonial officials took this as proof of their unreliability. This kind of labeling entered official records and helped build the stereotype of *Mofiz* as backward and simple.

The colonial rulers wanted to incorporate these lands and people into their system in a way that allowed better control. They portrayed the Chardwellers as both helpless and violent, which pushed them out of the national picture. Whether in Dhaka or London, the mention of "Char" or "Chilmari" evokes predictable responses. Anytime I mention research in Chilmari, I receive the response "Oh, *mofiz*," which exemplifies the baggage attached to the place. Similarly, when I mention the chars, or the chars of Chilmari specifically, people often ask, "Do lathiya still operate there?" Mining into the crevices of colonial history, one can trace a connection between the colonial history of land-making and the otherisation of char dwellers, namely from Chilmari.

Lathiya (stickbearers) or lathiya bahini (gangs of stickbearers) actively guarded char land. When land

disappeared, everyone lost control, but once it re-emerged the landowners needed to regain it. Each large landlord patronised lathiya bahini (battalion) who fought battles with others of the same occupation to take control over the newly emerged char. Though the prevalence of lathiya faded in recent years, the legacy still remains as the mere mention of chars conjures images of stick-laden bloody brawls. One such depiction can be found in the Subarna Mustafa film *Gohin Baluchor* released in 2017.

Colonial documents also raised concerns about squatters and opium trafficking in the region. These squatters were mostly displaced farmers from nearby districts who lost land due to erosion. At the same time, industries in Assam required labour. The empty chars near the Brahmaputra became a stopping point for displaced people either moving on to Assam or trying to settle down. These migrants, known as *Bhatias*, challenged colonial authority. Zamindars' agents lent money to these settlers hoping to make them labourers and keep control. But many could not repay their debts, leading to conflicts and forcing them to move again. Officials labeled the *Bhatias* as unreliable and noted they preferred Assam's charlands because those areas had fewer land laws. This portrayal criminalised their mobility and linked char settlements with disorder. What was really happening was not just prejudice but colonial accumulation from unstable lands. The chars and their inhabitants were made to seem disposable and wild to justify continued colonial exploitation.

This long history of colonial othering still shapes how the state talks about the chars and influences public perception. Because of this, chars remain marginalised in the national imagination. The people of Chilmari and similar areas are still belittled or dismissed through terms like *Mofiz*, which have roots in colonial stereotypes. This legacy, born in colonial times, continues through modern governance, limiting how these communities are understood and treated, which becomes explicit in every language in the city.

Erasing Identity at Scale

It's not just the term *Mofiz* used in the city or the colonial enframing of chars as violent and criminal frontiers and people in the north as simple, Chilmari itself holds within it layers of differences amongst its residents in the chars and in *qayem* (stable, mainland). In Chilmari, locals distinguish between *Bangals*, who speak Rungpuriya, the dialect and *Bhatias*, who speak a mix of Mymensingh and Rajshahi dialects. Despite differences in identity, they intermarry, share daily life, and face the same instability shaped by erosion and state neglect. Over time, the informal line between *Bangal* and *Bhatia* has thinned, replaced by a shared sense of what it means to live in the chars.

But the same response does not measure up to the mainland view on chardwellers. Terms like *Bhatia* or *Charua* are used with judgment. "Oh the *Bhatia*, they eat too many

spices," someone might say, as if the river gave them a different nature. They're called bold or too wild as shaped by the flow of the river unlike mainlanders, who, at least for now, are spared that chaos. Some even call them "Rohingya," like they don't belong. "Everyone in Chilmari is a Rohingya then," a Chardweller replies insisting that in the Bengal Delta, it is very much possible to lose all kinds of land in a go and therefore, everyone technically lives on chars and could face similar belittling someday, perhaps soon, perhaps intergenerationally later.

Everyday Language as a Barrier to the Way Forward

People living in the chars are not just geographically remote; they are continually made socially distant as well. Mainlanders and urban folk alike taunt them, often without reflection, for the very environment they are forced to adapt to. Both state and society treat the riverine lands as homes to the vulnerable who are also called "backward," reinforcing a narrative of marginalisation.

The casual use of terms like *Mofiz* normalises exclusion. The name developed among migrants grappling with poverty, land loss, and state neglect. It once served as part of a survival vocabulary, a marker of resilience for those navigating erosion, displacement, and hardship. But over time, rather than representing struggle and endurance, *Mofiz* has become a shorthand for stereotyping entire communities.

When politicians use the term *Mofiz* to mock their opponents, the real issue lies in a collective language of humiliation. Geography and history are flattened into slur, stripping people of their stories, respect, and context. Certainly, the cause for concern extends beyond a single word. Rather, the inability to keep up with differences layered in environmentally fragile areas causes worry. Soaring levels of climate-induced migration from low-lying regions like Chilmari have been predicted. If Bangladesh continues to turn ecological vulnerability into cultural inferiority, then future displacement will be met not with solidarity, but with more othering.

The plight of the displaced in adjusting to the new climates warrants critical attention. Readiness to address environmental issues requires awareness of the language used to describe populations. Perhaps practices of stereotyping threaten populations in need of a better environment more than the climate itself. Talking about *Mofiz* should not be confined to a side issue, but rather tells a worrying sign of institutional shortcomings where the usage of such terms is not discouraged.

The word *Mofiz* thus points to the bigger story of how Bangladesh still struggles to make space for its own diversity.

Dr Saad Quasem is a Lecturer in Anthropology and Climate Change at SOAS, University of London.

Floodwaters surround the Patrakhata Feichka Government Primary School and nearby homesteads in the Putimari char area of Kurigram's Chilmari upazila, as the Brahmaputra continues to flow above danger levels. The photo was taken on July 10, 2024.

Identifying BNP as *mofiz* notes the party as simple in thought and slow in action. Such remarks to scorn the opposition fell in line with similar comments directed at slighting the opposition by the totalitarian party in power. Be it a political party that uses the term *mofiz* to describe political inaptitude, the quick usage of the term implies the quickness of politicians to use the jab. The term *mofiz* has entered the urban jingo to stereotype the people of the north. It is not politicians alone who use the term, but everyday users who repeat it and almost institutionalise the erasure of the plight of the people being described, let alone otherising the people of the north into a certain pejorative demeanour.

The Waterscape

Chilmari is one of the poorest parts of Bangladesh, with over 77% of people living below the poverty line. Sitting on the Brahmaputra floodplains, it's hit hard by

diaspora in Dhaka. One traces back to the late 1970s, when a direct bus service from Chilmari to Dhaka opened up seasonal labour opportunities in the capital. The service, launched by an entrepreneur named *Mofiz*, grew into a profitable business. As busloads of labourers arrived in Dhaka, they were given chits stamped with *Mofiz*. As demand for workers grew, employers began saying, "I need a *mofiz*." The chit signaled that once work was done, the labourer would be returned via the same bus. Over time, *Mofiz* became a label for char migrants as disposable labour, tied to a bus route, and shaped by the state's neglect of river-induced hardship.

The other story tells of a man named *Mofiz* from Chilmari who arrived in Dhaka and struggled to navigate the unfamiliar city. Differences in language and behavior marked him and others like him as outsiders. Urban residents

described these areas as violent frontiers. Because of this, the chars became fixed in the colonial imagination as wild and dangerous lands. This perception did not disappear after colonial times but continues to affect

how people view and treat Chilmari and its residents. The British often portrayed the locals as tricky or untrustworthy. For example, a settlement officer in Rangpur noted that when asked for directions, locals often replied, "Mui Chenga Manish Babu, Mui Ki Janno," meaning "I am just a boy Sir, what do I know." The respondent was confused because river routes were complex and giving wrong information could cause trouble. Yet colonial officials took this as proof of their unreliability. This kind of labeling entered official records and helped build the stereotype of *Mofiz* as backward and simple.

The colonial rulers wanted to incorporate these lands and people into their system in a way that allowed better control. The people of Chilmari and similar areas are still belittled or dismissed through terms like *Mofiz*, which have roots in colonial stereotypes. This legacy, born in colonial times, continues through modern governance, limiting how these communities are understood and treated, which becomes explicit in every language in the city.

Chilmari and its residents are still shaped by the legacy of colonialism, particularly the use of the term *Mofiz* to otherise and marginalise them.

As the Brahmaputra continues to rise, the people of Chilmari are facing a new challenge: how to navigate the political and social landscape while maintaining their identity and way of life.

It is clear that the term *Mofiz* is just a symptom of a larger problem: the lack of respect and understanding for the people of Chilmari and their right to a dignified life.

As the world changes, so must our language and our actions. We must work together to create a future where everyone, regardless of where they live or what they look like, has the opportunity to thrive.

Only then can we truly reclaim the story behind *Mofiz*.

MANGO MOMENT

A sweet deal for Bangladesh

In a best-case scenario, mango-based export industries could bring about major socio-economic change through employment, rural development, and foreign exchange earnings.

SUKANTA HALDER and JAGARAN CHAKMA

In late May, as mercury levels rise and monsoon clouds loom over the parched plains and verdant hills of Bangladesh, the mango harvest quietly gets underway, ushering in a season of sweetness just as the rains prepare to break.

Trucks groaning under crates of golden mangoes barrel down highways from Chapainawabganj and Rajshahi, the heartlands of Bangladesh's mango belt.

In markets from Dhaka to Chattogram, retailers jostle for prime spots while eager consumers queue for their first bite of the delectable local

seasonal traders have long found the mango business a profitable venture, the country has made little progress in turning it into a staple of its agro-industrial portfolio.

Industry insiders point to a missed opportunity. With the increasing import of foreign fruit juices, jams, and jellies, Bangladesh has both the need and potential to develop a mango-based value added industry.

Even if international sales remain modest, substituting imports with local production could retain significant capital within the country.

In a best-case scenario, mango-based export industries could bring about major socio-economic change through employment, rural development, and foreign exchange earnings.

Since 1985, the government has launched several initiatives to expand mango production. Yet the fruit is still

missing from the national industrial strategy and is not treated as a strategic agro-processing product.

Currently, mangoes are cultivated across nearly 120,000 acres in Bangladesh, with key regions including Chapainawabganj, Rajshahi, Naogaon, and the Chittagong Hill Tracts (CHT), according to the Exportable Mango Production Project under the agriculture ministry.

The mango's economic importance is reflected in the labour it employs. In Chapainawabganj alone, every 10-acre orchard hires six to seven workers for a month, generating seasonal employment for nearly 80,000 people.

Globally, mangoes play a significant

Bangladesh produces 24 to 25 lakh tonnes of mangoes annually, according to Mohammad Arifur Rahman, project director of the Exportable Mango Production Project.

This fuels a domestic market worth around Tk 13,000 to Tk 14,000 crore.

However, barriers to export persist. While the flavour of Bangladeshi mangoes is often considered superior, their short shelf life and inconsistent appearance limit global competitiveness.

"The taste is unmatched, but our exports suffer due to issues with colour and perishability," Rahman noted.

Mango season is a boom time in districts like Naogaon, Rajshahi, and Chapainawabganj. Nearly the entire local population – students, hotel operators, truckers, and online sellers – gets involved. Among the most common varieties are Himsagar, Langra, Fazli, and Amrapali, while hybrid varieties like Kathimoni are gaining ground due to their bi seasonal availability.

In the CHT, where mango cultivation is growing, challenges are acute. While mangoes from three hill districts are of high quality, ecological complexity and

of 10 percent annually during the last five years. Across the country, around 80,000 people participate in the mango economy each season, from labourers and e-commerce operators to couriers and processors.

With 72 mango varieties in production and exports to 38 countries, Bangladesh's footprint is expanding.

"At one time, quality was an issue. But now, farmers are producing export-standard mangoes with support from the government," Rahman said.

China, Japan, and Australia expressed interest in importing Bangladeshi mangoes this year. On this year's National Mango Launch Day alone (May 28), 10 tonnes were exported to Saudi Arabia, Qatar, UAE, England, and Germany.

This season, 153 tonnes have already been shipped to 13 countries.

Packing houses have been built in major production areas and farmers are being trained to follow Good Agricultural Practices (GAP) to ensure safety and quality.

Supermarkets in Switzerland and Sweden now stock Bangladeshi mangoes. The project also seeks to link farmers directly with exporters to reduce middlemen and ensure better prices for growers.

One of the industry's champions is Munjur Alam, an agripreneur from Chapainawabganj who left his corporate job in 2017.

He now manages a 135-bigha integrated farm, with 30 bighas under mango cultivation. "We're moving into dried mango, jam, powder, and juice. Processing gives us year-round income," Alam said.

He began exporting to the Maldives in 2023 and is now targeting Canada and the Middle East.

Alam estimates the mango sector's true value at Tk 30,000-35,000 crore, far above official figures.

"We need better post harvest and quarantine infrastructure. If that's addressed, mangoes could become a billion-dollar export item," he said.

Another innovative voice is Abdun Nur Simul from Rajshahi, a seasonal orchard leaser and e-commerce mango trader. Simul has been in the mango business for four years.

"We lease high-yielding trees and oversee the entire process ourselves. Our mangoes go directly to customers via courier," Simul said.

Although the business is growing gradually, he said rising costs and erratic weather remain challenges.

His blend of traditional orchard leasing with modern logistics reflects a new frontier for mango marketing.

In the CHT, the mango revolution is reshaping lives. Historically self-reliant and ecologically balanced, the region is now becoming a fruit basket for the country, accounting for around 20 percent of national fruit production.

Debashish Chakma of Panchari, Khagrachhari, began farming on 15 acres in 2012 after leaving his job.

Today, he earns around Tk 25 lakh annually and employs 10 workers year-round. "More than 1,000 educated agribusiness entrepreneurs are active in Khagrachhari alone," he said. "We're laying the groundwork for an agro-processing boom."

One such visionary is Prasnat Chakma, a college lecturer-turned-agriculturist. "In 2022, I expanded from 60 to 1,500 trees. This year, I earned Tk 2.4 lakh," he said.

By 2030, he hopes to earn over Tk 50 lakh annually from mango and other fruits, including avocados, lemons, and wood apples.

Prasnat has already invested over Tk 14 lakh in his orchards over the past three years. His focus on pesticide-free, naturally grown mangoes has earned him a loyal customer base.

"The demand for clean, safe fruit is growing—and the hills are ideal for it," he added.

Currently, around 3,500 mango growers in Khagrachhari produce 60,000 tonnes annually, generating Tk 250 crore in revenue. With production growing by at least 10 percent yearly, the region's economic transformation is well underway.

The secret to their success? Purity. "We don't use harmful pesticides or toxic chemicals," Prasnat points out. "Our mangoes are naturally grown, and that's why consumers from the plains—and increasingly from beyond—are drawn to them."

Prasnat's story is more than just an individual success—it's a beacon of possibility for the entire CHT.

MA Sattar Mandal, professor emeritus at the Bangladesh Agricultural University in Mymensingh, said, "The time has come to unlock the full economic potential of mangoes—we urgently need a comprehensive national mango strategy."

Speaking to The Daily Star, Mandal, a leading voice in agricultural policy reform, outlined a vision that stretches far beyond seasonal harvests and roadside stalls.

He stressed the need for an integrated policy framework that nurtures the entire mango value chain—from varietal development and orchard management to advanced post harvest handling, processing, and global marketing.

"To build a competitive mango economy, we must scale up research and development, provide soft loans to growers and exporters, and set up dedicated mango clusters with modern cold storage facilities, processing units, and transport networks," he said.

Mandal believes Bangladesh already holds many of the building blocks needed for success: fertile land, a favourable climate, rich varietal diversity, and a hardworking farming community.

"What's missing," he argued, "is coordinated policy and institutional backing that would allow this sector to thrive both domestically and internationally."

He also called for a paradigm shift—from viewing mangoes as a seasonal harvest to recognizing them as a core agro-industrial commodity.

varieties, especially Langra or Himsagar—sweet, fragrant, and fleeting.

In this flurry of trade and taste lies a paradox: Bangladesh grows some of the world's most delicious mangoes, yet has barely scratched the surface of its economic potential.

Despite producing over 20 lakh tonnes annually, mangoes remain a seasonal indulgence rather than a strategic industry. Processing remains minimal, exports are limited, and infrastructure is patchy.

According to the Agricultural Information Service, mangoes are not only the most widely grown and consumed fruit in the country but also among the most versatile in terms of use and nutrition.

Grown across all regions of Bangladesh, its rich aroma, sweet taste, and nutrient content have earned it the title of the "King of Fruits".

Yet, despite their popularity and widespread cultivation, mangoes remain undervalued as a formal industrial commodity.

While farmers, nursery owners, and

economic role in countries like the Philippines and India.

The Philippines employs spurring techniques for year round production, while India has successfully positioned its mango industry as an agro-export powerhouse.

lack of consistent pest control hinder the residue-free certification needed for exports. "The quality is promising, but we still lack adequate assurance mechanisms," Rahman said.

Despite these hurdles, mango production has grown by an average
