

World must adapt to rising heat
Says WMO as Europe roasts in high temperatures

AFP, Geneva

The world will have to learn to live with heatwaves, the United Nations' weather and climate agency said yesterday, as much of Europe roasts in high summer temperatures.

World Meteorological Organization said that in future, people could expect heatwaves to occur more often and be more intense because of human-induced climate change.

WMO spokeswoman Clare Nullis said July was traditionally the hottest month of the year in the northern hemisphere, but it was exceptional to have episodes of extreme heat this early in the summer.

She said extreme heat was "widely called the silent killer", with the death toll often under reflected in statistics, compared to, for example, a tropical cyclone.

LEAKED HUN SEN CALL Thai court suspends PM from duty

REUTERS, Bangkok

Thailand's Constitutional Court yesterday suspended Prime Minister Paetongtarn Shinawatra from duty pending a case seeking her dismissal, in a major setback for a government under fire on multiple fronts and fighting for its survival.

The court accepted a petition from 36 senators accusing Paetongtarn of dishonesty and breaching ethical standards, based on a leak of a sensitive telephone call with Cambodia's influential former leader Hun Sen that was intended to escalate a territorial row and tense troop buildup at their border.

The leaked June 15 call triggered domestic fury and has left Paetongtarn's coalition with a razor-thin majority after a big party abandoned the alliance and accused her of undermining sovereignty, as protest groups threaten more demonstrations to demand a new government.

Deputy PM Juangroongruangkit takes over as caretaker premier while court decides the case against Paetongtarn, who has 15 days to respond and will stay in the cabinet as the new culture minister following a reshuffle.

Iran's nuke site shows activity after US bombing

CNN ONLINE

New satellite images show continuing work at Iran's Fordow nuclear enrichment plant, which was struck by US B-2 bombers just over a week ago.

The imagery was collected by Maxar Technologies on Sunday. Maxar said it "reveals ongoing activity at and near the ventilation shafts and holes caused by last week's airstrikes on the Fordow fuel enrichment complex."

The pictures show "an excavator and several personnel are positioned immediately next to the northern shaft on the ridge above the underground complex. The crane appears to be operating at the entrance to the shaft/hole."

According to Maxar, several additional vehicles are also seen

below the ridge and are parked along the path that was built to access the site.

Earlier this month, American B-2 bombers dropped more than a dozen bunker-buster bombs on Iran's Fordow and Natanz nuclear sites, while Tomahawk missiles launched from a US submarine hit the Isfahan site in central Iran.

The US Massive Ordnance Penetrator (MOP) bombs targeted the two ventilation shafts at Fordow, the two ventilation shafts at

according to the Chairman of the Joint Chiefs of Staff Dan Caine.

He told a Pentagon briefing last week that most of the bombs dropped at Fordow "were tasked to enter the main shaft, move down into the complex at greater than 1,000 feet per second, and explode in the mission space."

Former nuclear inspector David Albright said that imagery from Fordow on Saturday showed "the Iranians are actively working at the two MOP impact sites penetrating the ventilation shafts" at the plant.

Albright assessed that the activity "may include backfilling the craters, as well as conducting engineering damage assessments and likely radiological sampling. The craters above the main shafts remain open."

Trump signs order lifting sanctions on Syria

Says White House; rockets fired at Iraq airport

AFP, Kirkuk

President Donald Trump on Monday formally dismantled US sanctions against Syria, hoping to reintegrate the war-tattered country into the global economy as Israel eyes ties with its new leadership.

Trump lifted most sanctions against Syria in May, responding to appeals from Saudi Arabia and Turkey after former Islamist guerrilla Ahmed al-Sharaa ended a half-century of rule by the Assad family.

Meanwhile, two rockets struck the military section of Kirkuk airport in northern Iraq late on Monday, slightly wounding two security personnel, a senior security said.

Another rocket hit a house in the city of Kirkuk, causing material damage. "Two Katyusha rockets fell in the military section of Kirkuk airport," slightly wounding two security personnel, the senior security official said, adding that one failed to explode.

"A third rocket struck a house in the Uruba neighbourhood," causing material damage, said the official. The military section of the airport hosts Iraqi army units, federal police, and the Hashid al-Shaabi, a coalition of former pro-Iranian paramilitary forces. A security source told the official INA news agency that one of the rockets landed near the runways, while another hit a house in the city.

Three killed, 35 hurt; Moscow takes full control of Luhansk region

REUTERS

A Ukrainian drone attack on the Russian city of Izhevsk, more than 1,000 kilometres from the front line killed at least three people and hospitalised 35 more, the governor of the region said.

At least two long range drones operated by the Security Service of Ukraine (SBU) struck the Kupol plant, which the agency said produces air-defence systems and drones, from a distance of around 1,300 km (807 miles) and caused a fire, the official said.

Meanwhile, Russia has taken full control of Ukraine's eastern Luhansk region, the Russian-backed head of the region told Russian state television.

Luhansk, which has an area of 26,700 square km (10,308 square miles), is the first Ukrainian region to

fall fully under the established control of Russian forces since Russia annexed Crimea in 2014.

Putin in September 2022 declared that Luhansk - along with the partially controlled Donetsk, Kherson and Zaporizhzhia regions - was being incorporated into Russia, a step Western European states said was illegal and that most of the world did not recognise.

"The territory of the Luhansk People's Republic is fully liberated - 100%," Leonid Pasechnik, who was born in Soviet Ukraine and is now a Russian-installed official cast by Moscow as the head of the "Luhansk People's Republic", told Russian state television.

There was no immediate confirmation from the Russian defence ministry, or comment from Ukraine.

Trump suggests slashing Tesla subsidies

Elon Musk says 'cut it all'

REUTERS, Washington

US President Donald Trump yesterday suggested the government efficiency department should review the subsidies to Tesla CEO Elon Musk's companies to save money, reigniting a war of words between the world's most powerful person and its richest.

Trump's remarks came after Musk, a Republican mega-donor, renewed his criticism of the sweeping tax cut and spending bill and vowed to unseat lawmakers who supported it despite campaigning on limiting government spending.

"Elon may get more subsidy than any human being in history, by far, and without subsidies, Elon would probably have to close up shop and head back home to South Africa," Trump said in a Truth Social post, referring to the Department of Government Efficiency.

"No more Rocket launches, Satellites, or Electric Car Production, and our Country would save a FORTUNE. Perhaps we should have DOGE take a good, hard, look at this? BIG MONEY TO BE SAVED!!!"

In response, Musk said on his own social media platform X, "I am literally saying CUT IT ALL. Now." Trump said Musk was upset because he lost the EV mandate in the recent tax and spending bill and warned the Tesla CEO "could lose a lot more than that".

TACKLING AIR POLLUTION Delhi bans fuel for old cars

AFP, New Delhi

India's capital New Delhi banned fuel sales to ageing vehicles yesterday as authorities try to tackle the sprawling megacity's hazardous air pollution.

The city is regularly ranked one of the most polluted capitals globally with acrid smog blanketing its skyline every winter.

At the peak of the smog, levels of PM2.5 pollutants -- dangerous cancer-causing microparticles small enough to enter the bloodstream through the lungs -- surge to more than 60 times the World Health Organization's recommended daily maximum. Petrol cars older than 15 years, and diesel vehicles older than 10, were already banned from operating on New Delhi's roads by a 2018 Supreme Court ruling.
