LDC GRADUATION

UN report flags serious gaps in readiness

US-Israel war on Iran hurting Bangladesh economy as risks mount over export loss

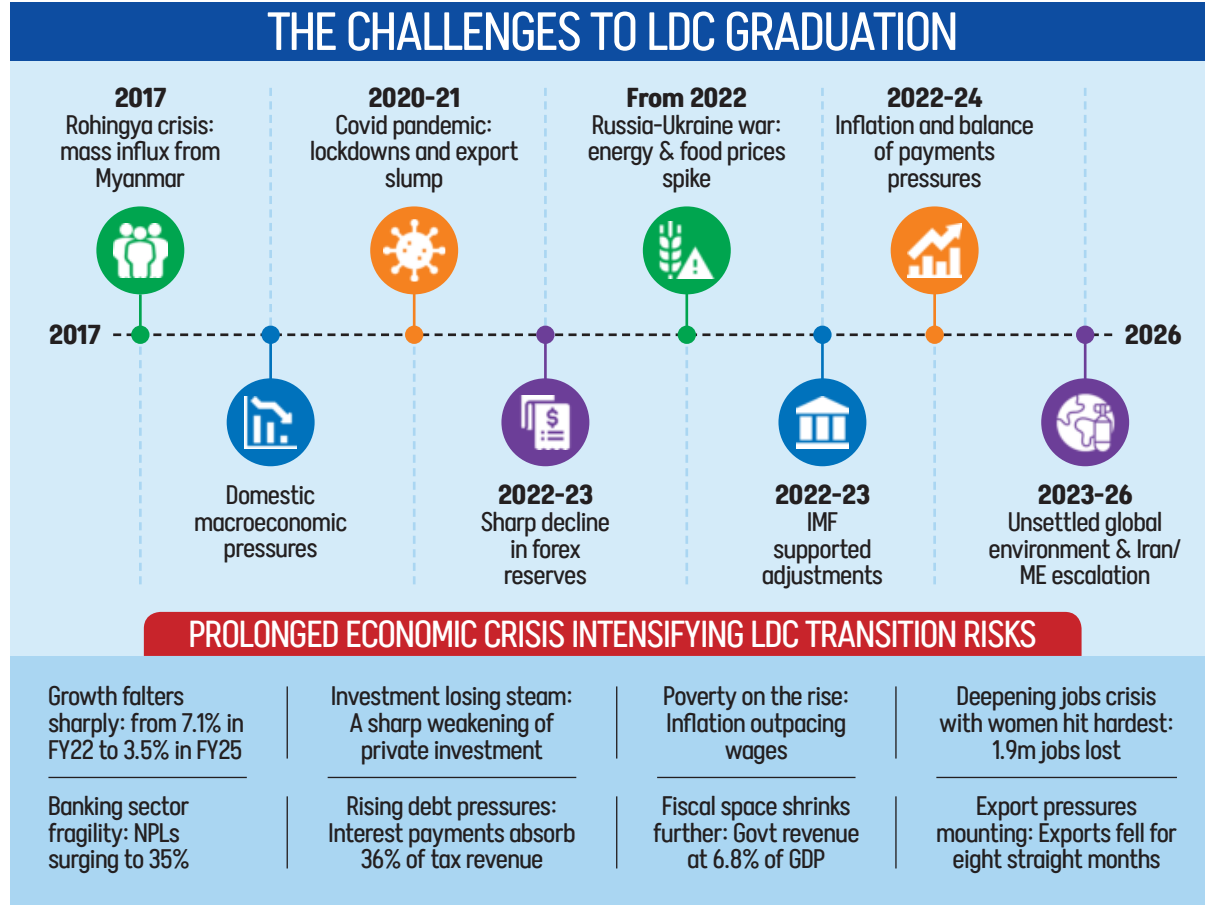

REFAYET ULLAH MIRDHA

Bangladesh's readiness for graduation from least developed country status in November this year has been undermined by domestic and international crises, a UN assessment warns, with the US-Israel war on Iran adding a new threat.

The report, released yesterday, underscores a series of shocks the country has faced between 2017 and 2026. These include continued exposure to climate vulnerability; the Rohingya crisis; a prolonged macroeconomic downturn predating the regime change; Covid-19 fallout; political transition; the Russia-Ukraine war; inflation; and balance of payments pressures.

An expert panel of the United Nations Office of the High

'Ordinance repeal could have been handled better'

BNP leaders at Standing Committee meeting

SAJJAD HOSSAIN

Some senior BNP leaders have expressed disappointment with the way the repeal of several key ordinances, issued during the interim government, was handled.

They said the issue was poorly managed despite there being valid grounds for the move. As a result, the opposition is now using it to mobilise protests and question the ruling party's stance on the July charter, which could have been avoided with clearer and more timely public communication.

At a meeting of the Standing Committee, the highest policymaking body of the BNP, at its chairman's Gulshan office on Saturday night, they said that as an all party parliamentary

Imported energy accounts for 59% of trade gap

Bangladesh's heavy reliance becoming structural burden, says global report

ASIFUR RAHMAN

Nearly three-fifths of Bangladesh's trade deficit is now driven by fossil fuel imports, underscoring how the country's growing reliance on imported energy has become a major structural burden on the economy, said the UK-based energy think-tank Ember.

The trade deficit in fiscal 2024-25 stood at \$20 billion, down from \$22 billion in fiscal 2023-24, according to Bangladesh Bank.

Heavy reliance on imported energy also leaves countries vulnerable to external disruptions, the report said, adding that geopolitical tensions in the Middle East have once again highlighted these risks. The cost of these imports has risen sharply as a result.

A trade deficit is an economic condition where a country imports more goods and services than it exports.

Spending on foreign oil and gas accounts for nearly \$0.60 of every dollar in the country's trade deficit, said the report titled "The Electric Fast-Track for Emerging Markets".

The report describes such spending as a persistent economic burden because it represents a recurring outflow of foreign currency rather than an investment that generates domestic economic value.

Ember prepared the analysis in partnership with the Climate Vulnerable Forum (CVF), of which Bangladesh is a founding member.

Only 10 out of 74 member countries of the CVF produce enough

US forces recover F-15 pilot in Iran

Trump hails rescue as 'one of the most daring' in its history; Iran says it 'foiled' mission after downing four US aircraft

AGENCIES

President Donald Trump yesterday said US forces safely extracted a second airman downed in Iran, calling it "one of the most daring Search and Rescue Operations" in its history.

Meanwhile, Iran said it had "completely foiled" the rescue operation and distributed images appearing to show the wreckage of several aircraft but did not confirm whether it had captured the US serviceman or that US forces had recovered him.

After announcing the rescue, Trump threatened in an expletive-laden post to strike Iran's power plants and bridges if it does not reopen the vital Strait of Hormuz.

The war, which erupted on February 28 with US-Israeli strikes on Iran, has engulfed the Middle East and convulsed the global economy. Iran has virtually blocked the Strait of Hormuz shipping lane, a conduit for roughly one-fifth of global oil trade, and launched strikes on Israel and its Gulf neighbours.

Trump warned Iran to stop choking traffic through Hormuz. "Open the f***ing Strait, you crazy bas***ds, or you'll be living in Hell," he said in his social media post. The Daily Star has used asterisks in the quote due to obscene language.

Trump's warning came as the Omani and Iranian deputy foreign ministers reportedly held talks on easing passage through Hormuz.

RESCUE OPERATION
Trump said on Truth Social that the airman had been "behind enemy lines in the treacherous

JULY CHARTER ROADMAP

No breakthrough in House yet

STAFF CORRESPONDENT

BNP lawmakers yesterday said they are committed to implementing the July charter in its entirety, including clauses with notes of dissent, while the Jamaat-led opposition said the ruling party is attempting to distance itself from the charter under the pretext of constitutional complexities.

The comments came as the treasury and opposition benches set out their respective stances during a two-hour discussion on an adjournment motion regarding the July National Charter 2025 in parliament.

Earlier, on April 1, treasury bench lawmaker Zainul Abdin Faroque placed the adjournment motion, seeking a discussion on the roadmap for implementing the July charter.

But yesterday's discussion ended without consensus on a roadmap.

Home Minister Salahuddin Ahmad said the BNP remains committed to implementing every clause of the July charter, including those with notes of dissent, and urged the opposition to join discussions on its implementation.

"Let's discuss how we can implement the July National Charter, which was signed historically, and determine the way forward. I had placed a proposal to form a special parliamentary committee for constitutional amendment."

While outlining key proposals in the July charter, Salahuddin noted that the BNP would pass laws in the current parliament to establish a judicial secretariat and regulate the appointment of judges.

He termed the July charter implementation order both a "colourable legislation" - a law that appears valid but exceeds the legislature's power, and a "fraud on the constitution".

"Many people view 1971 differently: for the majority it represents a people's victory, while for some it carries the stigma of defeat."

He concluded by saying that constitutions are not "reformed"; they are repealed, suspended, amended, or

MY DHAKA

PUNASHCHA DHAKA

Revisiting the city's social and cultural past

JAWWAD SAMI NEOGI

Dhaka has always been a city that returns to itself. Every alley, riverbank, and ruin seems to hold another story waiting to be rediscovered.

It is this endless wave of memories that Ridwan Akram's book "Punashcha Dhaka: Charsha Bacharer Dhakar Samaj O Sanskriti" seeks to explore. Published by Kathapokash, the book revisits more than 400 years of the capital's social and cultural history, presenting Dhaka as a layered historical landscape.

The title "Punashcha Dhaka" itself announces a return. According to the author, writing about the city never truly concludes. The past often appears in small, overlooked details that have shaped Dhaka's identity. Some stories remind us of the city's golden past, while others trace its decline and transformation over time. Though they may sound like tales, they are rooted in history.

Akram structures the book thematically, allowing readers to explore Dhaka through different phases of its past. The chapters are arranged under sections such as Transport, Festivals, Administration, and Conflict. Through these categories, the author paints a mosaic of the city's everyday life across centuries, its administrative structures, its cultural rhythms, and the professions and practices that once defined urban existence.

One of the book's strengths is the historical anecdotes it brings to light.

Dhaka became a Mughal provincial capital about 400 years ago, under Subahdar Islam Khan Chisti. The book revisits this period and raises curious questions about him, such as how he died in Dhaka and how his body was taken nearly 1,706 kilometres away to his final resting place.

The narrative also uncovers lesser-known chapters of the city's history. According to the book, in 1790, foreign soldiers introduced horsecarriages for hire, marking an early chapter in public transportation in the city. The book also traces the origins of Ramna Park,

which was first established during the Mughal era and has since witnessed many phases of the city's historical transformation.

The book is complemented by historical photographs gathered from a variety of archival sources. Many come from the British Library's collection, while others have been sourced from other repositories. These images add a visual dimension to the narratives, helping readers imagine the city's transformations across time.

Speaking about the book, Akram emphasises the responsibility that

comes with writing history. "Books live through detailed work, proper research and readers," he explains. According to him, the task of a historical work is not only to document facts, but also to create a meaningful connection with its readers.

The author also notes that the history of Dhaka exists in pieces scattered across different sources. His effort, he says, was to gather those pieces together. "The history might be here and there, but I took the initiative to collect them," he shares, adding that the work involved large-scale interviews and consultation with legitimate sources.

At the same time, Akram believes that historical writing must offer something fresh. "A book should give readers the taste of something new, something they may never have heard before."

In fact, Punashcha Dhaka is not the result of a single period of writing. Rather, it is a compilation of his essays and research gathered over many years. "I did not write this in one sitting," the author explains. "It is a collection that began many years ago, bringing together many of my writings about Dhaka's history in one place."

In that sense, Punashcha Dhaka works both as a collection of history and an invitation to rediscover the city. By bringing together archival sources, stories, and research, Ridwan Akram reminds readers that beneath Dhaka's busy present lies a rich past that still echoes through its streets.

US forces recover

FROM PAGE 1

rescue of another brave Pilot, yesterday, which we did not confirm, because we did not want to jeopardize our second rescue operation."

The airman, a weapon systems officer, was equipped with a pistol, a beacon and a secure communications device to coordinate with rescuers, the New York Times reported.

Two of the planes meant to transport him and his rescuers to safety were stuck in a remote base in Iran and had to be destroyed to prevent them from falling into Iranian hands, the New York Times and CBS reported.

US forces then used three other transport planes to carry the airman and his rescuers out of Iran, the reports said.

Iran's military said it had destroyed two C-130 military transport planes and two Black Hawk helicopters involved in the operation, which it said had made use of an abandoned airport in southern Isfahan province. Iranian media reported five people were killed in strikes during the operation.

Footage released by Iran's Islamic Revolutionary Guard Corps was presented as showing charred wreckage of an American aircraft scattered across a desert area, with smoke still rising.

'CHOOSE PEACE' Critical infrastructure across the Gulf came under attack from Iran again yesterday, with damage reported at civilian facilities in the United Arab Emirates, Bahrain and Kuwait.

Pro-Iran armed groups also carried out two attacks on US diplomatic sites in Iraq overnight, the US embassy in Baghdad said.

On another front, Lebanon has increasingly been drawn into the conflict since the Iran-backed Hezbollah group

began targeting Israel. Israel has struck back and pushed its ground forces into southern Lebanon.

A source from the Lebanese civil defence told AFP that an Israeli strike on southern Lebanon's Klar Hatta killed a family of six waiting to evacuate and a relative who had come to pick them up.

Another Israeli strike on south Beirut killed at least four people, the Lebanese health ministry said.

The war has cast a pall over Easter Sunday celebrations for Cristian minorities in Lebanon and across the region.

In the usually lively alleyways of Jerusalem's Old City, silence reigned yesterday.

As a security precaution, Israeli authorities have restricted access to the Holy Sepulchre, where the faithful commemorate Christ's crucifixion and resurrection.

In his Easter blessing at the Vatican, Pope Leo XIV urged "those who have the power to unleash wars" to "choose peace" instead and criticised global indifference to "the deaths of thousands of people".

'RADIOACTIVE FALLOUT' In Iran, a strike near the Bushehr nuclear plant on Saturday killed a guard and led Russia, which partly constructed the facility and helps operate it, to announce it was evacuating 198 workers and to condemn the strike.

Iranian Foreign Minister Abbas Araghchi warned that continued attacks on the plant on the southern coast could eventually lead to radioactive fallout that would "end life in GCC (Gulf Cooperation Council) capitals, not Tehran".

Bushehr is considerably closer to Kuwait, Bahrain and Qatar than it is to the Iranian capital.

UN report flags serious gaps in readiness

FROM PAGE 1

Representative for Least Developed Countries, Landlocked Developing Countries and Small Island Developing States (UN-OHRLS) has prepared the Graduation Readiness Assessment.

It finds that while Bangladesh meets all three criteria for graduation, significant risks persist, including the loss of trade preferences, fiscal and financial vulnerabilities, and fragile institutional coordination.

The report stresses the need for urgent reforms, stronger implementation capacity, adequate policy space, and a whole-of-society approach to ensure a smooth and sustainable transition.

Mohammad Abdur Razzaque and Daniel Gay, consultants to UN-OHRLS, presented key findings at a consultation organised by the Economic Relations Division at the Planning Commission in Dhaka yesterday morning.

"The assessment report shows that the graduation readiness of Bangladesh is weak and has a lot of concerns and challenges," Razzaque told The Daily Star on the sidelines of the event attended by ministers, diplomats, economists, business leaders, and researchers.

"Transition away from reliance on international support measures (ISMs) deserves to be viewed as a complex and carefully managed adjustment, requiring sustained policy attention and international support, institutional capacity, and risk mitigation to ensure that development gains are preserved and further consolidated in the post-graduation period. Smooth transition is key," the report said.

It added that a difficult political transition and prolonged macroeconomic crisis have dented socio-economic gains, intensifying Bangladesh's LDC transition risks.

Citing economists and other stakeholders consulted for the assessment, the report said rising import costs for fossil fuels create severe operational constraints

with gas supply shortages worsened by the war.

"A reliable, affordable energy supply is prerequisite for offsetting preference erosion through productivity enhancement and export diversification," it added.

Bangladesh is scheduled to graduate on November 24 this year after meeting all three criteria – per capita income, human asset index, and economic vulnerability index – twice since 2018, under two triennial reviews by the UN Committee for Development Policy (UN CDP), which decides on LDC graduation. The country also received a two-year extension due to the Covid-19 pandemic.

The report stresses the need for urgent reforms, stronger implementation capacity, adequate policy space, and a whole-of-society approach to ensure a smooth and sustainable transition.

Mid criticism from local businesses over potential export losses and economic vulnerabilities, the immediate past interim government had requested an independent UN assessment.

Subsequently, the BNP government applied to the UN CDP on February 23, seeking to defer graduation by three years to November 2029, citing economic fragility.

In response, UN-OHRLS commissioned the assessment last year, drawing on consultations with government agencies, the private sector, civil society, development partners, and the UN system. The report examines Bangladesh's preparedness for the withdrawal of LDC-specific support measures, emerging vulnerabilities, and institutional readiness to sustain development gains.

Under Secretary-General and High Representative of UN-OHRLS Rabab Fatima said Bangladesh's request for a three-year deferral is under consideration by the crisis response process of CDP's Enhanced Monitoring Mechanism.

She added that once the technical review is complete, the CDP will submit recommendations to the UN Economic and Social Council, which will form the basis for a General Assembly decision.

MAJOR ECONOMIC LOOPHOLES Speaking about transition risks, the report mentioned

that economic growth slowed sharply from 7.1 percent in FY22 to 3.5 percent in FY25, dampening momentum just before graduation.

Meanwhile, poverty is on the rise with inflation outpacing wages and pushing millions into greater hardship and vulnerability.

Private investment weakened significantly, with capital machinery imports falling from \$5.1 billion to \$2.8 billion during 2019-2024.

The jobs crisis has deepened, with nearly 1.9 million jobs lost between 2023 and 2024, disproportionately affecting women.

Financial sector fragility remains acute, with non-performing loans in banks surging to 35 percent.

Fiscal space is extremely limited, with revenue at just 6.8 percent of GDP, while interest payments consume 36 percent of tax revenue, pushing the country's debt distress risk from low to moderate.

Exports have declined for eight consecutive months, with US tariffs and volatile global trade conditions worsening external pressures.

AREAS OF WEAKNESS The report said that Bangladesh's preparedness for the loss of trade-related international support measures remains weak, with nearly 75 percent of exports dependent on LDC-specific duty-free access.

A recent UNCTAD report estimates Bangladesh could lose over \$17.5 billion in annual exports after graduation.

Only limited mechanisms, such as the UK's Developing Countries Trading Scheme and a free trade agreement with Japan, have been secured.

Preparedness for the EU market, the largest destination, remains the weakest link. Inadequate preparation for the post-LDC phase, with no preferential EU market access for apparel, comes just as the recently concluded EU-India and EU-Vietnam FTAs are set to intensify competitive pressure.

Bangladesh is also unprepared for the

loss of World Trade Organisation policy flexibilities, particularly around export subsidies and Trade-Related Aspects of Intellectual Property Rights obligations, which will require stronger intellectual property protection and enforcement capacity.

Domestic readiness to offset preference erosion through lower logistics costs, improved compliance, energy reliability, and export diversification remains inadequate.

The report warns that amid ongoing macroeconomic turmoil, Bangladesh's vulnerabilities, including reliance on external support, a lack of diversification, and exposure to shocks, could become more pronounced.

Bangladesh's preparedness for post-LDC financing realities is poorly aligned with the scale of the challenge. While concessional finance will not end abruptly, terms are tightening and LDC-specific windows are shrinking.

Global Official Development Assistance is also under pressure, with Bangladesh graduating amid declining aid flows and tighter donor budgets.

Effective use of available finance is constrained by weak project management, poor revenue mobilisation, rising debt servicing, and limited fiscal space. Coordination gaps and delayed preparation have hindered strategic use of transition-related financing opportunities.

Implementation of the Smooth Transition Strategy (STS) has also been slow and uneven, with limited private sector engagement, weak inter-ministerial coordination, and unclear financing frameworks.

Although Bangladesh meets all graduation criteria, the central challenge lies in managing the transition and sustaining development gains.

As the largest LDC and the biggest beneficiary of international support measures, Bangladesh faces a uniquely complex transition. The process is

unfolding amid political uncertainty and a prolonged economic crisis, placing decades of progress under strain, the report said.

The UN has repeatedly emphasised, including under the Doha Programme of Action, that graduation should not disrupt development, making a smooth transition essential.

In this sense, Bangladesh represents a critical test case for ensuring that graduation translates into sustainable progress, the report said.

STAKEHOLDERS' CONCERNS Consultations with 20 government agencies, industry bodies, civil society, and development partners during the assessment report reveal persistent concerns.

Stakeholders emphasised the need to shift towards productivity-driven competitiveness, strengthen macroeconomic stability, and improve institutional coordination. Economists estimate potential export losses of 5.5-15 percent due to the erosion of duty-free access, alongside higher costs for non-generic drugs due to TRIPS obligations.

They also highlighted fiscal and financial weaknesses, including a low tax-to-GDP ratio, high non-performing loans, currency depreciation, declining domestic savings, and falling foreign direct investment.

Logistics inefficiencies costing around 16 percent of GDP, more than double the global average, continue to erode export competitiveness.

Priority areas identified include bilateral and regional trade agreements, tax reform, export diversification, institutional strengthening, and energy sector reforms, particularly in renewables.

RECOMMENDATIONS Meeting graduation thresholds alone does not ensure readiness for a smooth transition, the report cautions.

It said Bangladesh must urgently focus on nine priority areas: securing EU market access, stabilising

the macroeconomy, reforming the banking sector, ensuring energy reliability, improving logistics, enhancing preparedness, strengthening employment and social protection, expanding fiscal space, and deepening engagement with the UN system.

With political upheaval, economic stress, and implementation gaps converging, the February 2026 CDP review represents the final structured opportunity to reconsider the graduation timeline.

Sustained progress, the report concludes, will depend on structural reforms, from export diversification and energy transition to governance and logistics, in order to shift from preference-dependent growth to productivity-driven competitiveness.

POLICYMAKERS' VIEWS Finance Minister Amir Khosru Mahmud Chowdhury said Bangladesh has no scope to move toward LDC graduation in the current context, citing severe economic distress inherited from the previous government.

"The government is firefighting to stabilise the economy. The Middle East war has raised fuel import costs, causing our reserves to bleed," he added, briefing reporters at the National Multistakeholder Consultation on Bangladesh's Graduation Readiness Assessment at the NEC conference room.

He further said, "Debt repayment is a major challenge. Only after capacity building and fulfilling our election pledges can we decide when to pursue LDC graduation."

Commerce Minister Khandakar Abdul Muktedir also stressed the importance of prudent debt management and expanding the tax base to restore momentum.

Rashed Al Mahmud Titumir, PM's adviser on finance and planning, said structural transformation, diversification, and productivity gains are essential to achieve the vision of a "Trillion Dollar Economy" by 2034.

Imported energy

FROM PAGE 1

fuel to meet their own needs. The rest, including Bangladesh, are net importers.

The report identified Bangladesh as one of the most burdened economies where fossil fuel import dependence accounts for the largest share of the trade gap.

Only Morocco at 79 percent and Pakistan at 67 percent rank above Bangladesh.

Over the past decade, Bangladesh's demand for electricity, transport fuel, and industrial energy has risen sharply alongside economic growth.

At the same time, declining production from domestic gas fields has forced the country to increasingly rely on imports of crude oil, refined petroleum products, LNG, and coal.

This growing reliance on imported fuel has effectively turned energy imports into what the report calls a "structural tax" on the economy.

Bangladesh currently spends around \$12 billion annually on energy imports, including oil, LNG and coal, making fuel purchases one of the largest sources of foreign currency outflow for the economy.

Currently, about 30 percent of Bangladesh's gas demand is met through imported LNG, making it one of the fastest-growing components of the country's energy import bill.

Heavy reliance on imported energy also leaves countries vulnerable to external disruptions, the report said, adding that geopolitical tensions in the Middle East have once again highlighted these risks. The cost of these imports has risen sharply as a result.

In a prolonged conflict, with oil averaging \$100 per barrel through 2026, the CVF nations' collective oil import bill could rise to \$158 billion – more than \$30 billion higher than in 2024, the report said.

Earlier this year, Bangladesh had to purchase spot LNG cargoes at more than double the usual price, with shipments costing around Tk 1,300 crore compared with roughly Tk 500 crore previously, according to a top official at Petrobangla.

Spot LNG prices also climbed above \$20 per MMBtu, compared with roughly \$9-10 per MMBtu under long-term contracts,

significantly raising the country's import bill, he said.

Bangladesh imported 109 LNG cargoes in 2025 at a cost of about \$3.88 billion, up from 86 cargoes costing roughly \$3.02 billion in 2024, reflecting both rising demand and higher international prices.

The country also imports large volumes of petroleum fuels such as diesel and furnace oil for power generation, transport and industry. The cost of these imports has also risen sharply, affecting both public and private sector suppliers.

A sharp increase in global prices of liquefied petroleum gas (LPG) recently forced the Bangladesh Energy Regulatory Commission to raise the retail price by about 28 percent.

Economists say persistent trade deficits can create multiple economic challenges.

"In the last decade and a half, Bangladesh ramped up power generation capacity largely relying on fossil fuels, which has exposed the country to volatile international energy markets and increased the subsidy burden," said Shafiqul Alam, lead analyst for Bangladesh energy at the Institute for Energy Economics and Financial Analysis.

Policymakers should recognise that in an era of frequent geopolitical crises, Bangladesh needs to build greater resilience in its energy system, including expanding renewable energy sources, he added.

Heavy fossil fuel imports raise the cost of doing business in such economies, the report said.

Companies often face higher operational costs due to volatile fuel prices, while governments must manage the macroeconomic consequences of large energy import bills.

"Over time, this dependence can create a cycle in which energy imports continue to widen trade deficits and strain foreign exchange reserves."

However, reducing reliance on fossil fuel imports will take time, as Bangladesh's energy demand continues to grow and many power plants and industrial systems remain dependent on imported fuels.

As a result, managing the economic impact of energy imports will remain a major policy challenge for Bangladesh in the coming years, the report added.

PM seeks support
of all faiths for
prosperous country

UNB, Dhaka

Prime Minister Tarique Rahman yesterday sought cooperation from people of all religions to build a happy, prosperous and better Bangladesh.

"Let us all work together, regardless of religion or background, to build a happy, prosperous and better Bangladesh. People of all religions and communities must come forward for the greater cause of the country," he said.

The prime minister made the call while exchanging Easter greetings with leaders of the Protestant Church at the Cabinet Room of the Prime Minister's Office in the Secretariat, according to his Additional Press Secretary Atikur Rahman Rumon.

A 13-member delegation, led by Bishop Philip P Adhikari, president of the Federation of Protestant Churches in Bangladesh, met the prime minister around 11:45am and exchanged views with him on the occasion of Easter Sunday.

Addressing the gathering, Rumon said the prime minister wished success and prosperity for the Christian community.

DMP FOOTPATH DRIVE
44 held, Tk 10 lakh
fine realised in 5 days
Vendors demand rehabilitation

STAFF CORRESPONDENT

At least 44 people were arrested, and around Tk 10 lakh was realised as fines during a five-day drive by the Dhaka Metropolitan Police (DMP) to reclaim encroached footpaths and roads in the capital.

The drive, which began on April 1 and ended yesterday, was carried out in different areas under the DMP's Lalbagh, Wari, Ramna, Mirpur, Motijheel, Tejgaon, Gulshan, and Uttara traffic divisions.

Additional Commissioner (Traffic) Anisur Rahman said follow-up operations will be conducted in the cleared areas to prevent reoccupation.

"We will continue monitoring so that encroachers cannot return. Our next steps will be announced through mass awareness campaigns," he said.

He also said the government is actively working on the issue of evicted vendors' rehabilitation. "Initially, vendors may be accommodated in eight designated locations through holiday and night markets," he added.

My daughter is a college student, and my husband is ill and unable to earn. I support my family through this business, but the eviction drive destroyed my livelihood.

NCP slams repeal of
reform ordinances,
warns of protests

STAFF CORRESPONDENT

National Citizen Party (NCP) spokesperson Asif Mahmud Shojib Bhuyain yesterday protested the government's move to repeal several key ordinances issued by the interim government and warned of a larger movement.

Recall what happened in the past, learn from that experience, and show goodwill so we can build a better Bangladesh together.

"We call on the government to come to its senses. Recall what happened in the past, learn from that experience, and show goodwill so we can build a better Bangladesh together. Otherwise, we will have no option but to launch another movement, which will be a loss for the country," he said at a press conference at the NCP central office in Banglamotor.

Asif alleged that ordinances strengthening the powers of the prime minister and the executive are being retained, while those ensuring public accountability are being repealed.

"This is a serious threat to democracy and a violation of the Constitution. If

Dhaka Wasa turns to
groundwater despite
unfinished projects

Tk 920cr 'emergency' plan draws criticism; experts warn of falling water table, long-term risks

DIPAN NANDY

Despite growing concerns over the fast-depleting groundwater table, Dhaka Wasa is set to seek Ecneec's approval for a Tk 920.85 crore "emergency" water supply project that will rely on groundwater extraction.

Titled "Emergency Water Supply in Dhaka City", the proposed project aims to add 57 crore litres of water per day by replacing deep tube wells, installing new ones, and regenerating existing wells, according to project documents.

The project is likely to be placed at an Executive Committee of the National

**Wasa's goal was to reduce groundwater dependence, but failure to complete ongoing projects while returning to large-scale extraction is unsustainable.**PROF ADIL MOHAMMED KHAN
Urban planner

Economic Council (Ecneec) meeting today. If approved, it would be implemented from January 2026 to June 2030

with government funding.

The move comes at a time when two of Dhaka Wasa's surface water projects, aimed at ensuring a sustainable water supply for the capital, remain incomplete.

It also triggered concern among experts, who say the initiative reflects a growing dependence on short-term fixes while structural solutions continue to face delays.

The projects -- Gandharbpur Water Treatment Plant (Phase 1) and Saidabad Water Treatment Plant (Phase 3) -- were designed to shift the city away from its heavy reliance on groundwater. Once

Govt renames
Baishakh
procession
'Baishakhi
Shobhajatra'

STAR REPORT

Cultural Affairs Minister Nitai Roy Chowdhury yesterday said the government has decided to rename the Bangla New Year procession as "Baishakhi Shobhajatra", forgoing the terms "Ananda Shobhajatra" and "Mangal Shobhajatra".

"We will not call it 'Ananda Shobhajatra' or 'Mangal Shobhajatra'. The procession will simply be referred to as 'Baishakhi Shobhajatra,'" he told reporters after a meeting at the Secretariat.

The minister said the government finalised the new name after discussions at multiple meetings to avoid division and end the ongoing debate over the traditional Pahela Baishakh procession's name.

"We do not want division

'They killed my
son, destroyed
our dreams'
Witness testifies at
ICT-1 against Salman F
Rahman, Anisul Huq

STAFF CORRESPONDENT

A pall of grief engulfed the courtroom of the International Crimes Tribunal-1 yesterday as two bereaved family members recounted how their loved ones were gunned down in Mirpur-10 during the July uprising, testifying in a crimes against humanity case filed against former adviser Salman F Rahman and former law minister Anisul Huq.

Abdul Matin, father of Sheikh Shahriar Bin Matin, broke down to tears during cross-examination, holding up a laminated photograph of his son before the tribunal.

"Sir, this is my son's picture. They brutally killed my son and destroyed our family's dreams," he said. Fighting back tears, he described Shahriar as just 18 years old, a student sitting for his HSC examinations, whose education he had sustained through immense hardship.

When the defence sought to disclose his workplace, prosecutors intervened, warning that witnesses in similar cases had lost their jobs after being identified.

KILLINGS OF SIX IN CTG

Charges against Hasan Mahmud, Nowfel pressed at ICT-2

STAFF CORRESPONDENT

The prosecution yesterday pressed formal charges with the International Crimes Tribunal-2 accusing former ministers Hasan Mahmud and Mohibul Hassan Chowdhury Nowfel, former lawmaker ABM Fazle Karim Chowdhury and 19 others of crimes against humanity over killing six people and injuring over 100 others during the July 2024 uprising in Chattogram.

The prosecution of the International Crimes Tribunal yesterday submitted formal charges in the case to the tribunal's registrar office. The tribunal is expected to hold a hearing on the charges today before ICT-2.

The case earlier drew attention after allegations surfaced that a prosecutor had sought Tk 1 crore from Fazle Karim's family in exchange for arranging his bail in the crimes against humanity case.

According to the prosecution, the accused faces three charges.

The first charge relates to the killing of Wasim Akram, Faysal Ahmed Shanto and Faruq Ahmed during the uprising. The second charge concerns the killing of Tanvir Siddique, Saimon alias Mahin and Hridoy Chandra on August 4. The third charge involves the injuring of Jahid Hasan, Abdullah Kader, Achiya Khatun, Sanjida Sultana and Abdullah Lubab, along with more than a hundred others.

Other accused in the case include Awami League leader and former mayor of Chattogram City Corporation AJM Nasir Uddin; Awami League leader Rezaul Karim Chowdhury; Md Mohiuddin Bacchu; Helal Akbar Chowdhury Babar; former Chattogram city unit BCL general secretary Nurul Azim Rony; former ward-21 councillor Shaibal Das Sumon; Md Firoz; Abu Salek; Esrarul Haque; HM Mithu; Nur Mostafa Tinu; Debashish Paul Debu; Zamir Uddin; Azizur Rahman; Imran Ahmed Imu; Zakaria Dastagir; Mohiuddin Farhad; Sumon Dey and Tauhidul Islam.

Besides, the defence lawyer of Shahriar Kabir, former president of the Ekattorer Ghatok Dalal Nirmul Committee, sought divisional facilities for him in jail before International Crimes Tribunal-1.

The tribunal said it would consider the request in accordance with the rules. Shahriar is currently in jail in a case over the 2013 Shapla Chatra crackdown killings.

In the same case, the prosecution sought permission to interrogate former deputy inspector general Abdul Jalil Mondal. The tribunal granted the request.

Additionally, the tribunal allowed a defence prayer permitting accused army officer Lt Col Moshir Rahman Jewel to meet his wife, who is expecting a baby. As per the order of the tribunal, he will be allowed to meet her at the Combined Military Hospital during his wife's tough time.

NCP slams repeal

FROM PAGE 3

challenged in court, such laws may not stand," he said.

He claimed that institutions like the judiciary and the Anti Corruption Commission are again becoming vulnerable to political influence, despite earlier criticism over their politicisation.

He also questioned the government's commitment to constitutional principles, citing the appointment of administrators instead of elected representatives in local government bodies. According to him, existing provisions allow the executive to remove elected officials at will, posing a threat to democratic processes.

Asif further criticised the repeal of privacy protections under the Right to Information framework, warning that multiple agencies could regain the power to intercept phone calls and private communications without proper judicial oversight.

"Dictatorships are born this way. We are seeing the signs again," he said.

He also warned that if the government does not accept the outcome of the recent referendum and enact reform-related ordinances into law, the NCP may declare the process illegitimate and intensify its movement.

Asif said the party had initially planned to focus on organisational work and local government elections but was forced to take to the streets due to government

inaction.

He also urged former advisers involved in drafting the ordinances to speak up in defence of constitutional rights.

He demanded that reform related ordinances be enacted into law and that previous provisions introduced under special circumstances be repealed to demonstrate genuine commitment.

Govt renames

or conflict among people. We want unity in diversity," he said. He added that in a democratic society, people of different opinions and ideologies coexist, and such diversity reflects its strength.

The minister said the procession is a long standing cultural tradition inherited from earlier generations, particularly from the farming community.

"As their successors, we find ourselves debating the name, and we want to resolve this issue," he said.

The minister said the procession will be organised with dignity and inclusivity, allowing people to participate with their own traditions, music, instruments, and attire.

"People will take part with their own cultural expressions, making it a festive and inclusive procession," he added.

He said the new name reflects the broader spirit of Baishakh, similar to how events like Baishakhi fairs are referred to.

Fuel shortage halts Barishal trawlers, leaves fishers idle

Fish supply in local markets drops sharply

SUSHANTA GHOSH, Barishal

Thousands of fishermen across Barishal division have been passing idle days and suffering financial losses as most fishing trawlers are left anchored at docks amid the ongoing fuel shortage.

This in turn has disrupted the supply of fish in local markets to a significant extent.

More than 1,000 sea-going trawlers remain stranded in Alipur and Mohipur, leaving over one lakh fishermen and workers unemployed. Investors in the fishing sector are facing significant losses, particularly those operating with bank loans.

Pritam Das, owner of two trawlers that have remained docked at Mohipur river port since Eid, said each needs around 14 barrels of fuel per trip, but they have not been able to collect any fuel from dealers in Kalapara.

"As such, around 50 fishermen and crew members of the two trawlers are now sitting idle. We are spending nearly Tk 50,000 daily just to maintain them," he said, adding that despite informing the district fisheries office and the upazila administration, there has been no effective solution yet.

Abdul Jalil, owner of Messrs Moni Fish, said he owns six trawlers and has investments in around 200 others. "All of those are now stuck at the port amid fuel shortage," he added.

He explained that large trawlers require 20-30 barrels of fuel per trip, medium sized ones need 10-15 barrels, and smaller vessels need at least two barrels. A typical fishing trip lasts around 10 days.

"No one is addressing our situation.

Thousands of fishermen and workers have become jobless. Many had previously taken bank loans and are now facing severe financial hardship," he added.

Md Israil Pandit, president of a fishers' association in Barishal division, said the crisis has severely affected around 5,00,000 fishing families.

The impact has also affected related industries. Fish supply to markets across Barishal has declined sharply, prompting a drop in ice production due to reduced demand, according to the Barishal Divisional Fisheries Office.

According to wholesale fish traders at the Port Road Market in Barishal city, they are now selling around 500 maunds of fish daily, half of what they used to sell daily around this time last year.

Golam Kabir, an official of Barishal Ice Mill Owners' Association, said the demand for ice has fallen to only 200-250 maunds against the total production capacity of 1,500-1,600 maunds in the region's five ice mills.

Retail ice trader Suman said he usually sells

15-20 maunds of ice at Tk 400 per maund, but sales have dropped significantly due to the shortage of fish in the market.

According to Mohammad Anisuzzaman, senior assistant director of the Department of Fisheries in Barishal, fish supply at 108 landing stations across the division has declined by more than 30 percent, leading to an increase in price by 20-100 percent.

He also noted that a seasonal ban on sea fishing is scheduled to begin on March 15, but fishermen have already been unable to go to sea due to the fuel crisis.

"They have requested fuel support so they can at least make one trip before the ban," he added.

Meanwhile, some 2,30,389 of the around 3,00,000 registered fishermen in the division are currently receiving government food assistance, officials said.

Contacted, Anisur Rahman, a senior sales officer of Meghna Petroleum Company, denied any overall fuel supply shortage. He claimed that the company is meeting around 90 percent of demand, supplying up to 2,50,000 litres of fuel daily to 29 petrol pumps and 68 dealers in the region.

He, however, admitted that fishing trawlers have not been receiving fuel since Eid. "Following a request from the Kalapara upazila nirbahi officer, we have supplied around 27,000 litres of fuel to two local dealers for distribution," he added.

Confirming the development, Kalapara UNO Kavsar Hameed said 27,000 litres of fuel, allocated to two dealers in Kalapara, are being distributed among fishers.

44 held, Tk 10 lakh fine

FROM PAGE 3

Yesterday, on the fifth and last day, joint teams of traffic police and mobile courts carried out drives in areas including New Market, Science Lab, Motijheel, Agargaon, and Mirpur-1, removing makeshift shops, roadside stalls, and illegal business extensions from footpaths and roads, confiscating goods, and dismantling temporary structures in several locations.

In Agargaon, removed vendors' belongings from the footpath as they did not vacate occupied spaces despite repeated warnings, said locals. Many sidewalks were seen remaining comparatively clear amid ongoing enforcement.

Earlier, on March 23, DMP announced the citywide drive starting April 1, urging traders to remove their belongings in advance. The notice warned that violators could face fines, imprisonment, and confiscation of goods.

According to the notice, many businesses continue to encroach on walkways, using grills, ovens, chairs, and makeshift platforms, forcing pedestrians onto roads, causing public inconvenience and worsening traffic congestion.

Meanwhile, many hawkers say the sudden crackdown has left them struggling to survive.

Sumaiya, a footpath vendor at Mirpur-10, demanded rehabilitation before eviction. "My daughter is a college student, and my husband is ill and unable to earn. I support my family through this business, but the eviction drive destroyed my livelihood," she said.

"For the past five days since my stall was removed, I have been selling goods by hand," she said, expressing worries about paying rent and her daughter's education expenses.

"If we are evicted without rehabilitation, where will we

go?" she said.

On Thursday, Dhaka North City Corporation Administrator Mohammad Shafiqul Islam told a programme that business activities will no longer be allowed on footpaths or roads to keep those free from encroachment.

He, however, assured that alternative arrangements would be made for small and floating traders.

A five-member representative will be formed for detailed consultations, while the city corporation plans to introduce a token system for vendors to prevent extortion, he also said.

"If anyone demands money after you receive a token, inform us—we are with you," he added.

Dhaka South City Corporation Administrator Abdus Salam said the government is planning for designated evening markets at around eight locations across the capital to accommodate vendors without disrupting traffic.

WAR PICTURES

US satellite firm declares blackout

Cites Trump request

AFP, Paris

US satellite imagery company Planet Labs said Saturday it will stop publishing high resolution aerial pictures of the area involved in the Middle East war, following a request from President Donald Trump's government.

"Effective retroactively from March 9, 2026, Planet is moving to a managed access model, extending the publication delay for all new imagery within the designated AOI (area of interest), and releasing imagery on a case-by-case basis and for urgent, mission-critical requirements or in the public interest," the company said in a message to clients received by AFP.

This area was defined in a previous announcement as all of Iran and allied bases in the area, as well as Gulf states and existing conflict zones.

Smoke rises from an Israeli strike in Beirut's southern suburbs yesterday. One of Israel's strikes in Beirut killed at least four people and wounded 39 in the Jnah neighbourhood, the Lebanese health ministry said.

600-mile strike push US positions lethal long-range missiles for Iran war: report

TNN, New Delhi

The United States is set to commit nearly its entire inventory of stealthy long-range JASSM-ER cruise missiles to its ongoing military campaign against Iran, significantly depleting stockpiles earmarked for other regions, according to a Bloomberg report.

Citing a person with direct knowledge of the matter, Bloomberg reported that orders were issued in late March to pull the \$1.5 billion missiles from Pacific reserves, with additional weapons from the continental US and other locations being redirected to US Central Command bases and Fairford in the United Kingdom.

After the redeployment, only about 425 JASSM-ER missiles will remain from a pre-war inventory of roughly 2,300, the report said. Around 75 more are considered "unservicable" due to damage or technical faults. The remaining operational stock would be sufficient for approximately 17 B-1B bomber missions.

The JASSM-ER, or Joint Air to Surface Standoff Missile Extended Range, has a strike range exceeding 600 miles and is designed to hit targets from a distance while avoiding enemy air defences. Alongside the shorter-range JASSM, which has a range of about 250 miles, nearly two-thirds of US stockpiles have now been allocated to the Iran conflict.

The heavy use of long-range precision weapons comes as US and Israeli forces continue their air campaign launched on February 28. According to the report, more than 1,000 JASSM-ER missiles were expended in the first four weeks of the war alone.

While such weapons reduce risks to personnel by enabling stand-off strikes, their rapid consumption is straining inventories meant for potential conflicts with more advanced adversaries such as China. Replenishing these stocks could take years at current production rates.

US AIRMAN RESCUE OPERATION

What we do and don't know

CNN ONLINE

The second US serviceman whose aircraft was shot down on Iranian soil has been rescued in a bold operation which marks a clear success for the US president at a time when he is under mounting pressure to end a war.

In a triumphant post on Truth Social this morning, Donald Trump announced the second US service member of the downed F-15E Strike Eagle fighter jet had been rescued. Here's what we know so far — and what we don't.

WHAT DO WE KNOW?

Both US service members of a US F-15 fighter jet that was downed over Iran on Friday have now been rescued. The first was rescued shortly after the crash and is receiving medical attention.

The second service member, who was a Colonel, "sustained injuries," according to Trump, however he added he will be "just fine."

As CNN's national security analyst Alex Plitsas noted, the rescue prevented the crew member becoming a "strategic bargaining chip" for Tehran. The rescue operation involved dozens of aircraft, armed with "the most lethal weapons," Trump said. No American troops were killed or wounded during the rescue, he added.

WHAT DON'T WE KNOW?

We don't know the precise details of the rescue operation and where it took place. Plitsas said it may go down as "one of the most harrowing rescue operations in US military

history."

The second serviceman's exact location and identity remain unclear. Trump said the US military had been monitoring his location 24 hours a day, and "diligently planning for his rescue."

Ejecting from a military aircraft subjects aircrew to extreme forces and can result in trauma, meaning that questions remain over the nature of his injuries.

Despite many in Iran calling

including 2 Black Hawk helicopters and one military transport aircraft C-130, were hit and are now burning," it said.

Video and images released by Iranian state media and geolocated by CNN appears to show the burnt out wreckage of several aircraft in southern Esfahan province.

State media claimed Iranian forces shot down the aircraft seen in the images. In a post on Truth Social President Trump, made no

for the immediate capture of the second downed US crew member, with officials offering a reward to anyone who found and handed him over, he evaded being caught behind enemy lines for nearly two days.

WHAT IS IRAN SAYING?

Iran's state Tasnim News Agency claimed "several enemy American aircraft" were destroyed in the Isfahan region. "The invading enemy aircraft in southern Isfahan,

mention of aircraft losses, but did say no US service members were injured or killed in the operation.

WHAT DOES IT MEAN FOR WAR? For Trump the successful rescue operation offers some rare positive news, and the US president has called on all Americans to unite in pride over the mission. It also spares the US potential messy hostage negotiations that may have occurred if the US airman had been captured by Iran.

Iraqi ships can pass Strait of Hormuz

Iran praises the country's 'struggle' against the US as transits tick up slightly

AGENCIES

Iran has announced that Iraqi ships are free to pass the Strait of Hormuz, the latest sign of Tehran easing its stranglehold on the critical conduit for global energy supplies.

Iraq will be exempt from all restrictions in the strait, with controls only applying to "enemy countries", Iran's Khatam al-Anbiya Central Headquarters said in a statement on Saturday.

"We hold profound respect for Iraq's national sovereignty," the military command said in the statement carried by the semi-official Tasnim news agency.

"You are a nation that bears the scars of American occupation, and your struggle against the US is worthy of praise and admiration."

Iran's announcement came as US President Donald Trump reiterated his demands for Tehran to make a deal or relinquish control of the waterway, warning in a social media post that "all hell" would rain down within 48 hours otherwise.

Iran's Khatam al-Anbiya Central Headquarters rejected Trump's demand, calling his threat a "helpless, nervous, unbalanced and stupid action".

Iran has effectively blockaded the strait, which usually carries about one-fifth of global oil and liquefied natural gas supplies, since the US and Israel launched their war on the country on February 28, reports Al Jazeera online.

While maritime traffic has ticked up in recent weeks under a de facto toll booth system imposed by Tehran, it is still down more than 90 percent from normal levels, according to ship tracking data.

According to Lloyd's List Intelligence, there were 53 transits through the strait last week, the most since the war began, up from 36 the previous week. On Friday, a French container ship and a Japanese-owned tanker crossed the strait in the first apparent transits linked to either country since the start of the conflict.

The collapse of shipping in the waterway has thrown a wrench in global energy markets, pushing up fuel prices and prompting authorities in many countries to roll out emergency energy conservation measures.

Govt to act

FROM PAGE 12

Ahmed Khan, to formulate a new pay structure. On January 22, the National Pay Commission submitted its report to the chief adviser.

It recommended increasing salaries and allowances of government employees, with raises ranging between 100 percent and 140 percent. It proposed raising the minimum salary from Tk 8,250 to Tk 20,000 and the highest salary from Tk 78,000 to Tk 1.6 lakh. The report said around Tk 1.06 lakh crore in additional funds would be needed to implement the recommendations.

At present, the government's total expenditure for around 14 lakh government employees and 9 lakh pensioners stands at Tk 1.31 lakh crore annually.

Sources at the Finance

Division said several steps remain before the recommendations can be implemented. As part of this, a nine-member review committee was formed on February 8.

The committee will examine the reports of the National Pay Commission 2025, the Bangladesh Judicial Service Pay Commission 2025, and the Armed Forces Pay Committee 2025, and submit recommendations to the government.

However, after a new government was formed through the February 12 national election, the review committee still could not begin its work due to the lack of direction from the new administration.

After yesterday's decision, the committee will now continue its work.

Ordinance repeal

FROM PAGE 1

special committee was not formed before repealing the ordinances, questions have been raised over whether the BNP has moved away from its position on the July charter.

The Daily Star spoke to at least four meeting attendees, all of whom requested anonymity.

"Out of the 133 ordinances, around 97 or 98 may be taken up, while the rest may need more time for review. Before the election, we made it clear that the BNP would not implement anything it did not agree with," said a Standing Committee member who was at the meeting.

"People voted for us on the basis of our own commitments, not to carry out the agenda of others. We will implement what we promised, but we will not do anything we did not commit to."

This was the first meeting of the Standing Committee, presided over by party Chairman and Prime Minister Tarique Rahman, since the party returned to power following the February 12 national election.

The last meeting before this was held on January 9.

The two-hour meeting on Saturday began with a review of the government's

performance in its first 47 days, during which Standing Committee members congratulated the government and expressed satisfaction with the gradual implementation of the BNP's electoral pledges, as well as the positive public response.

Leaders noted that the launch of canal excavation, distribution of Family Cards, and the tree plantation programme were significant moves in line with the pledges.

They said people living along the canals must be involved in the excavation programme, and that people at the union and ward levels should be engaged.

They also said the Farmer Card distribution programme beginning on Pahela Baishakh was in keeping with the election manifesto.

The leaders stressed that corruption must be stopped in the country at any cost, and that the prices of essentials must be kept low, because people will not accept hardship caused by war and will expect relief in their daily lives.

Meanwhile, they expressed dissatisfaction over the large number of cases filed against BNP grassroots leaders and activists across the country

that remain pending, leaving many party members grappling with legal hassles.

One of the leaders said, "In my district, cases against top leaders have been withdrawn, but those against grassroots leaders are still pending."

Some senior leaders also said they were unhappy with how the transport and power ministries are handling the ongoing fuel crisis and road deaths, saying it has fuelled public resentment.

"During Eid, people died in road accidents, yet the minister said travel had been 'smooth', which was not appropriate. There were also long queues at filling stations, but it was still said that there was no crisis," a Standing Committee member told this correspondent.

At the meeting, leaders discussed the tension that has spread across the country over fuel oil, with BNP leaders saying the panic among the public appeared to be greater than the actual scale of the crisis.

They said this had led some people to stock up on fuel unnecessarily, while others were taking advantage of the situation through smuggling, and stressed the need for strict monitoring and legal action

against those involved.

The BNP said it welcomed criticism from the opposition if it was genuine, but accused its rivals of trying to spread propaganda and create confusion over the July charter issue.

Party leaders said the Jamaat-led II party alliance's threat of street protests was part of an unsuccessful campaign against the BNP, adding that the party had decided to closely watch the opposition's moves rather than respond directly.

Meanwhile, discussions also focused on strengthening and expanding the party's organisational and political activities, as grassroots activities have slowed in many areas since the elections and require urgent reorganisation.

After the meeting, BNP Secretary General and LGRD Minister Mirza Fakhru Islam Alamgir said, "We will try to move towards the council as quickly as possible."

The party last held its sixth national council on March 19, 2016.

He added that Tarique convened the meeting of the Standing Committee to discuss how to keep the party active and sustain its regular operations.

Israeli strike kills 4 in Gaza

Medics say; several others injured

AFP, Gaza City

Gaza's civil defence agency and a hospital reported that an Israeli strike on a group of civilians in the Palestinian territory yesterday killed four people and wounded several others.

The attack took place before dawn in an eastern neighbourhood of Gaza City, the territory's largest urban area, according to the agency, which operates as a rescue force under Hamas.

"An Israeli airstrike before dawn killed four and wounded several," the civil defence agency reported. Gaza's Al-Shifa hospital confirmed the toll, saying the strike was carried out by an Israeli drone.

"Four martyrs and five wounded arrived at the hospital this morning after an Israeli drone fired two missiles at a group of civilians," the hospital said in a statement.

Reached for comment, the army said it was looking into the reports.

Yet another tragic fire at a factory

Govt must ensure Keraniganj factory fire is the last of such accidents

It is outrageous that fires at illegally-run factories keep claiming lives in our country, while authorities continue to produce patchwork solutions to address these recurring man-made disasters. On Sunday, a fire at a gas lighter manufacturing plant in Keraniganj took the lives of at least six people, including a young girl, and injured at least 15. It is feared that the death toll may rise, as several workers are still missing.

According to locals, there were at least 40 workers on the factory premises—mostly women and children—and many could not escape through the main gate, as it was locked during the fire. Although it was opened later, many workers had to find alternative ways to escape. This reminds us of the incident at the Rupnagar garment factory, where a chemical fire at an adjacent building took the lives of 16 workers, including minors, last year. They too could not escape the smoke and toxic fumes because the door to the roof was padlocked. Another disturbing similarity the Keraniganj fire shares with the Rupnagar fire is the lack of fire safety measures. Worse still, the factory was closed following a fire in 2024; yet it kept on operating without legal papers.

Sadly, similar disregard for the law appears to persist among many enterprises and business owners in this country. Otherwise, how can hazardous factories continue to operate in residential areas, as in the case of Rupnagar, or a minor as young as 12 work in a gas lighter manufacturing plant, as in Keraniganj? In fact, the way almost every unlicensed hazardous factory operates in Bangladesh is itself an accident waiting to happen. Thus, it is not a surprise that many of them lack fire safety measures or even a proper evacuation plan in case of fire.

While we appreciate that ministers visited the scene and announced financial help and medical treatment for the victims, this is not where their responsibility ends. The factory owner must be brought to justice, and the departments that failed to ensure that the shuttered factory remained closed must also be held accountable. Two probe committees were formed to investigate the incident, but such actions in the past have done little to prevent similar accidents from recurring. Therefore, we urge the government to take stern action based on the findings of the probe reports. The government must ensure that the Department of Inspection for Factories and Establishments has the manpower and resources to conduct routine drives against hazardous factories that operate without legal documentation or employ minors. Meanwhile, relevant authorities must ensure that all businesses and private enterprises have fire and building safety protocols and systems in place. Labour may be cheap in Bangladesh, but it must never be mistaken for cheap lives.

Protect Narsingdi's rivers

Stop polluters, restore navigability

It is deeply concerning that rivers flowing through Narsingdi are facing a severe environmental crisis. Once vital lifelines sustaining surrounding communities and ecosystems, rivers such as the Shitalakkhya, Meghna, Brahmaputra, Arial Kha, Haridhoa, and Paharia are now being pushed to the brink by the unchecked discharge of untreated industrial waste. A report in this daily has laid bare the scale of degradation, exposing the long-standing failure of authorities to regulate industrial pollution in the district.

Over the years, rapid and unplanned industrial expansion along riverbanks has gone on with little regard for environmental protection. Factories have been releasing toxic effluent directly into rivers, severely contaminating the water. Illegal encroachment along the riverbanks has further worsened the situation. For much of the year, even small boats struggle to navigate many rivers due to reduced flow. Several rivers now have critically low dissolved oxygen levels. Even during the monsoon, when water levels typically rise, oxygen remains dangerously low, making survival difficult for fish and other aquatic life.

Among these rivers, the 38 km Haridhoa ranks second among the most polluted rivers in the country. According to a study by the River and Delta Research Centre, its dissolved oxygen level has dropped to a shocking 0.6 mg/L—far below what is needed to sustain aquatic life—while its alkalinity poses serious risks to biodiversity and human health. Although Tk 10 crore was allocated a year ago to address pollution in the river, the funds have yet to be fully disbursed. Such delays allow environmental degradation to continue unchecked. Meanwhile, initiatives such as re-excavating river channels to restore navigability are unlikely to succeed unless pollution is effectively checked.

In 2019, the High Court delivered a landmark judgment declaring rivers as "living entities" and appointing the then National River Protection Commission (now the National River Conservation Commission) as their legal guardian. The court also issued a series of directives to protect our rivers. Sadly, little has changed since then, with most of our rivers still on the verge of destruction. This situation cannot be allowed to continue.

We urge the government to take bold, decisive action against polluters and encroachers. Regulatory bodies, including the Department of Environment and the National River Conservation Commission, must step up efforts to protect the rivers in Narsingdi and throughout the country. Polluting industries must also be compelled to install and operate effluent treatment plants without exception. Without urgent and visible action, too many of our rivers could soon reach a point of no recovery.

THIS DAY IN HISTORY

US officially enters World War I

On this day in 1917, two days after the US Senate voted 82 to 6 to declare war against Germany, the US House of Representatives endorses the declaration by a vote of 373 to 50. As a result, America formally entered World War I.

When reform becomes more power, less accountability

Kamal Ahmed is consulting editor at The Daily Star. He led the Media Reform Commission under the immediate past interim government. His X handle is @ahmedkal.

KAMAL AHMED

With the parliamentary politics once again becoming vibrant and engaging, a clear fault line is gradually emerging between the ruling party, BNP, and the opposition, Jamaat-e-Islami (JI). Not too long ago, these two parties were political allies—both in government and in opposition—jointly leading street movements against the rise of authoritarian rule under Sheikh Hasina and her Awami League. Their eventual split largely stemmed from a redrawing of the country's political landscape following the uprising against Hasina's dictatorial regime, which ultimately consigned her party to political irrelevance.

Both parties have been victims of egregious abuses of power, including the criminalisation of state institutions under Hasina's rule. They endured severe persecution—enforced disappearances, extrajudicial killings, arbitrary arrests, fabricated charges, prolonged detention without trial, and brutal physical violence. At one point, their political futures appeared nearly extinguished due to the judiciary's partisan alignment with the executive. In response, both parties championed sweeping reforms in governance and key state institutions, particularly the judiciary, security apparatus, and law enforcement,

The 13-member parliamentary committee also proposed that 15 ordinances be introduced in amended form, while 16 others should be deferred for further revision rather than presented as bills now. Most strikingly, the committee recommended scrapping four ordinances outright, three of which relate to judicial reforms widely considered essential for ensuring judicial independence.

with a shared commitment to accountability and the rule of law.

In the newly redrawn political landscape, both parties continue to profess support for fundamental reforms, though their interpretations diverge significantly. The reform process initiated by the interim government led by Professor Yunus—through 11 thematic commissions and a National Consensus Commission—resulted in the July National Charter as well as 133 ordinances aimed at overhauling governance and state institutions. Subsequently, the newly elected Jatiya Sangshad formed a parliamentary committee

that recommended legal validation of 98 of these ordinances without amendment. At first glance, such broad agreement might suggest an impressive level of political consensus. A closer examination, however, reveals a far more troubling picture. The 13-member parliamentary committee also proposed that 15 ordinances be introduced in amended form, while 16 others

should be deferred for further revision rather than presented as bills now. Most strikingly, the committee recommended scrapping four ordinances outright, three of which relate to judicial reforms widely considered essential for ensuring judicial independence. Reactions from the opposition alliance led by JI, as well as from prominent non-partisan civil society actors and rights groups, suggest that these decisions represent a significant step backward.

The committee report includes notes of dissent from opposition members but none from those

FILE VISUAL: ALIZA RAHMAN

on the treasury bench. Three opposition MPs formally objected to 12 ordinances. These dynamics point to a disturbing pattern: rather than exercising independent judgment, many lawmakers appear to have adhered strictly to party directives. Notably, the report omits mention of a ruling party MP who submitted a detailed letter opposing the decision

effectively revive earlier practices that allowed significant executive influence over judicial appointments and the lower judiciary. This is especially striking given that many senior BNP leaders, including Tarique Rahman and Khaleda Zia, have themselves suffered from what many describe as the weaponisation of the judiciary under the previous regime. There are also suggestions that elements within the bureaucracy have resisted the creation of an independent judicial secretariat—claims that the government should address transparently to justify its position.

Equally concerning is the apparent retreat from efforts to strengthen institutional accountability. The parliamentary committee's recommendation to defer (meaning allowing to lapse) 16 ordinances includes key legislation such as reforms to the National Human Rights Commission (NHRC). Allowing this ordinance to lapse could effectively dismantle the current NHRC, which has arguably the potential to be the most effective in the country's history, as its members include experts who have investigated over 1,500 cases of enforced disappearance while leading a different probe commission. Reports indicate resistance from security agencies and bureaucratic actors to empowering the NHRC, particularly regarding its authority to investigate abuses and operate independently.

It is particularly troubling that a party with a significant number of victims of enforced disappearances now appears to accept national security justifications for limiting oversight. Such a position not only contradicts the spirit of the July mass uprising but also undermines fundamental human rights obligations. Mere pledges by the BNP to bring back these legislations with improved and stronger safeguards are least assuring, as such revisions could have been made during the ongoing process of validating other ordinances.

The opposition JI members of the committee are not without fault. Their revisionist proposals—particularly the suggestion to remove references to Jamaat-e-Islami, Muslim League, and Nezam-e-Islami as collaborators with Pakistani forces from the ordinance on Muktijoddha Council—are deeply problematic. This effort to sanitise historical wrongdoing avoids necessary accountability and reconciliation. A more responsible approach would involve acknowledging past actions and offering a formal apology. How JI's allies, especially the NCP, a party born out of the uprising and led by its youth leaders, respond to such revisionist tendencies remains to be seen.

The decision to scrap three ordinances related to judicial independence, particularly those concerning judicial appointments and the establishment of a separate secretariat for the Supreme Court. These moves

to let certain ordinances lapse or be discarded. This raises concerns that Article 70 of the constitution—which restricts MPs from voting against party lines—is already being enforced, despite prior commitments by all parliamentary parties to limit the application of Article 70 to confidence votes and finance bills.

A review of the ordinances slated for approval, revision, or rejection suggests that the ruling BNP may be prioritising consolidation of power over accountability, contradicting its own 31-point reform agenda. Among the 98 ordinances likely to pass unchanged are provisions that expand executive authority, including powers to remove elected local government officials and discipline civil servants. Given Bangladesh's history of partisan interference in local governance, retaining such provisions risks replacing elected representatives with politically loyal administrators—an outcome that diverges sharply from BNP's stated commitments and undermines recommendations from the Local Government Reform Commission. Many of the remaining ordinances are administrative in nature and carry limited political significance.

The most contentious recommendation, however, is the decision to scrap three ordinances related to judicial independence, particularly those concerning judicial appointments and the establishment of a separate secretariat for the Supreme Court. These moves

Frugality is key to withstanding the energy shocks

Nazmun Naher is a water resources expert with extensive experience in regional and international integrated water resources management. She can be reached at nnazmun.mita@gmail.com.

NAZMUN NAHER

Given the current worldwide energy crises, economic uncertainties, and rising geopolitical tensions, the principles of frugality and sustainable consumption are essential measures for preparing for major crises and conflicts. Practising mindful consumption today can strengthen us to withstand the shocks of tomorrow.

Frugality begins at home. Simple actions such as turning off lights and appliances when not in use, choosing energy-efficient devices, and minimising water wastage can reduce household energy consumption and contribute to broader resource conservation. Sustainable consumption also urges us to reconsider our purchasing habits, given that each unnecessary purchase carries hidden environmental costs such as the energy used in production, transportation, packaging, and disposal. Prioritising essential needs over wants can not only conserve resources but also builds financial resilience, which is crucial in times of crisis.

The government has already taken several measures to address energy shortages and resource management issues. Policies promoting energy efficiency, renewable energy adoption, regulated peak-hour electricity use, and public transport initiatives are steps in the right direction. However, the challenge lies in implementing and managing these measures effectively. Policies alone cannot achieve sustainable outcomes. Individuals must internalise these principles, ensuring that energy-saving behaviours, mindful consumption, and resource-conscious choices are practised consistently. Balancing economic development with energy conservation is delicate but essential. Of course, growth is necessary, but it must not come at the cost of depleting vital resources or weakening national resilience.

Travel, a significant contributor to energy consumption and carbon emissions, is another area where frugality matters. While mobility is important, frequent long distance

trips or luxury travel during crises place additional strain on already struggling resources. Opting for local trips, combining journeys, or postponing non-essential travel reduces energy use, saves costs, and mitigates environmental impact. Using public transport, cycling, and carpooling further enhances sustainability practices while fostering collective preparedness.

Frugality is also a preparatory strategy for crisis management during wars or periods of geopolitical instability. Global conflicts often disrupt supply chains, increase resource scarcity, and create sudden pressures on energy or finances. Individuals and communities that practise frugality by conserving energy, limiting unnecessary consumption, and focusing on essential needs are naturally better equipped to withstand such shocks. Sustainable consumption becomes a form of strategic resilience, ensuring that families and societies can maintain stability even in extreme circumstances.

It should be noted that frugality does not equal deprivation. It is a deliberate, ethical approach to consumption that is guided by necessity, sustainability, and foresight. Every choice—from energy use to shopping habits to travel decisions—contributes to a better collective capacity for managing crises. Minimising food waste, choosing

reusable products, and supporting local goods reduce environmental pressures while building economic and social resilience. Each small action compounds to protect energy resources, reduce emissions, and maintain essential supply systems. Moreover, frugality reinforces national resilience. By limiting unnecessary expenditure and adopting energy-efficient practices, citizens contribute to the stability of the economy and the conservation of critical resources. In periods of conflict, the merit of these habits is felt strongly as they reduce dependence on strained supply chains and help create a buffer against sudden shortages.

Ultimately, sustainable consumption and frugality are essential acts of foresight and responsibility. Small, consistent choices can have far-reaching effects. The ongoing energy crisis, combined with global instability, demands that we embrace frugality as a guiding principle. By adopting sustainable consumption habits, supporting relevant policy measures, and prioritising essential needs, we can balance economic development with energy conservation while preparing for potential crises and conflicts. We must commit to frugality not as deprivation, but as a conscious strategy to ensure environmental sustainability, personal resilience, and societal preparedness.

Repeal of Supreme Court ordinances may return courts to political captivity

Barrister Khan Khalid Adnan
is advocate of the Supreme Court of Bangladesh, fellow at the Chartered Institute of Arbitrators, and head of the chamber at Khan Sajjur Rahman and Associates in Dhaka.

KHAN KHALID ADNAN

The move to repeal the Supreme Court Secretariat Ordinance, 2025 and the Supreme Court Judges' Appointment Ordinance, 2025 is being presented as prudence. But it is actually the latest expression of an old political reflex: every ruling class in Bangladesh wants courts that speak the language of independence but operate within boundaries set elsewhere. Experts have seriously condemned and criticised the proposed repeal. The law minister's assurance that the texts can be scrutinised and returned later as bills should be read together with the rollback itself, not as a cure for it. Usually, first comes institutional retreat, then comes the promise of consultation, and then comes the graveyard of reform. Bangladesh has seen this script too many times now to mistake it for caution.

The real mistake in much of public discussion is to treat judicial independence as a noble abstraction. The issue is far more concrete and far uglier. A politically pliant judiciary helps governments do three things that raw executive power alone cannot do: it sanitises persecution, legitimises constitutional vandalism, and disciplines dissidents through procedure rather than openly through force. That is why these ordinances matter. They touch the two pressure points through which capture usually operates: who gets onto the bench and who controls judges once they are in office.

Anyone who thinks this is exaggeration should return to the 13th Amendment review judgment. The most damning passage in it is not the restoration of the caretaker framework, but the court's acknowledgement that, in the gap between the 2011 short order and the later full judgment, the judiciary appeared to have "buckled under the legislative pressure" (pp 59-61). That is an extraordinary admission. It amounts to a constitutional confession that the court could be bent at the very moment it was meant to operate in the nation's interest. Once the highest court says that politics may have shaped constitutional adjudication, appointments and institutional control cease to be technical questions and instead become factors influencing the survival of democracy. It is also noteworthy that former Chief Justice Khairul Haque, who authored the 13th Amendment judgment, has been in custody since July 24, 2025 (albeit on unrelated charges). The symbolism is difficult to ignore. The same pattern has been visible in other cases as well. Former Chief Justice SK Sinha

VISUAL: ANWAR SOHEL

resigned following intense government pressure after the 16th Amendment judgment. He publicly denied claims of illness and stated he was forced to leave the country. He had to say openly before the media that he was neither sick, nor was he escaping, and that the government was misguided. In later interviews and in his book, *A Broken Dream*, he alleged intimidation by intelligence officials, coercion by senior state authorities (namely, the then prime minister, law minister, and attorney general) at Bangabhaban, and severe personal and institutional pressure to deliver a judgment favourable to the then government—which he had refused to do (pp 526-530).

In August 2024, then Chief Justice Obaidul Hassan and several Appellate Division judges resigned, again confirming how shattered

public confidence in judicial neutrality had become. And the cases against Khaleda Zia showed, in perhaps the cruellest possible way, what a compromised judiciary can do to a political opponent. No principled democrat needed to be a partisan of Khaleda Zia to see the problem: an elderly opposition leader with serious medical complications was denied bail and/or meaningful relief for years, only for the Appellate Division to later (that is, after

follows the prime minister's advice. The most sensitive stage has long been the appointment of additional judges under Article 98, which serves as the main entry point to the higher judiciary. This structural feature allowed patronage-driven appointments to persist.

Although the Awami League restored consultation with the chief justice for permanent appointments under Article 95 through the 15th Amendment in 2011, it chose

opaque patronage system with a statutory process. The High Court itself (when asked to strike down parts of it) accepted that the existing scheme had defects and lacunae, noted the prevalence of political appointments, and described the ordinance as desirable in the national interest while leaving room for parliamentary debate and revision. That is the correct constitutional sequence: courts identify vulnerabilities and parliament improves the law. What the parliament must not do is destroy the framework first and promise improvement later. That is not refinement. It is a relapse.

The same is true of the Supreme Court Secretariat Ordinance. Judicial independence is not secured merely because judges write their own judgments. It requires administrative control over postings, promotions, discipline, staffing, and the everyday machinery through which careers are made or broken. The High Court's 2025 ruling restoring Supreme Court control over the lower judiciary and ordering a separate judicial secretariat was important precisely because it confronted the operating core of executive influence. A lower court judge who knows that administrative destiny still depends on the executive does not need to receive a direct order to understand the limits of courage. Institutional dependence teaches self-censorship more efficiently than threats ever could.

Defenders of the repeal say no elected parliament should feel bound by ordinances issued by an interim government. That is a respectable argument only if it is applied honestly. These ordinances are being targeted not because they are procedurally impure, but because they constrain the two forms of influence that elected governments most prize: control over appointments and control over judicial administration. If there are defects in composition, age thresholds, disclosure rules, or selection criteria, amend them now. Strip out what is weak. Tighten what is vague. Add transparency where it is missing. But do not reopen the old void and ask the public to trust that something better will one day emerge from it. In Bangladesh, legal vacuums are rarely neutral and are almost always filled by the executive.

The real question before parliament now is brutally simple. Does it want an independent judiciary, or merely a friendlier one?

If these ordinances are allowed to die, the answer will become obvious. The country will be told once again that reform is admirable in speeches, expendable in office, and negotiable whenever it threatens the political class' control over the courts. That would not just be a waste of a historic reform moment; it would restore the institutional conditions that made constitutional distortion, partisan prosecution, and judicial intimidation possible in the first place. Bangladesh does not need that system repaired. It needs it buried and replaced with one that no government can quietly reclaim.

the August 8, 2024 regime change) describe the proceedings as a "manifestly contrived misapplication of the law" amounting to "malicious prosecution." This was not a minor judicial error, but a structural failure that demonstrated how laws can be weaponised when courts cease to function as independent adjudicators.

The historical justification for the repealed ordinances is, therefore, significant. Bangladesh's present situation is the result of a gradual weakening of constitutional safeguards. The original 1972 constitutional framework assigned the chief justice a role in judicial appointments, but later amendments and political practice steadily reduced the scope of the role. In practice, the consultation requirement was always limited, since Article 48(3) ensures that presidential authority

not to extend the same safeguard to Article 98, thus clearly violating the 1972 framework's structure. As a result, initial appointments to the High Court Division remain largely within executive control, creating space for political preference and favouritism.

The system relied on convention where firm legal limits were required, and that reliance proved misplaced. The 2008 attempt to establish a Supreme Judicial Commission was later abandoned with the return of electoral politics, not because it failed but because it restricted executive discretion. The underlying reality is clear: control over appointments is a source of power, and governments are reluctant to surrender it.

The Supreme Court Judges' Appointment Ordinance in particular was an attempt, admittedly an imperfect one, to replace that

How 'middle powers' are leaving the Global South behind

Dr Dan Gay
is an international trade and development economist based in the UK.

DAN GAY

At last week's World Trade Organisation (WTO) Ministerial conference in Cameroon, the world's big trading nations, including Europe, the UK, and Canada, effectively gave up on collective decision-making. Instead, they said they'd focus more on seeking voluntary agreements or plurilateral agreements among themselves. These types of deals diverge from normal WTO consensus-based decision-making, where every country is supposed to agree on everything.

The so-called middle powers have decided to strike trade deals with each other in e-commerce, digital trade, and services, ignoring international poverty or what the Global South wants. If these plurilateral agreements eventually become international law, all countries will be obliged to comply irrespective of whether they helped write the rules. The global South must either put up or shut up.

One advantage of multilateralism—the idea that all countries must be involved in decisions—was that smaller, less powerful countries had clout because they could block deals they didn't like. Whilst it was clunky in practice, at least it gave these countries a small voice.

Plurilateral agreements "aim to sideline multilateralism so that self-selective groups of more powerful states can cherry-pick what they negotiate," said Jane Kelsey, an emeritus professor of law at the University of Auckland. On top of these plurilateral agreements, the less powerful countries are increasingly

being subjected to regional and bilateral agreements. They risk being excluded as the middle powers do more deals.

Smaller economic size, skills, resources, and negotiating capacities often mean they are not proactive enough to initiate talks and do not negotiate effectively. In relative terms, their market access will decline unless they take action. January's India-EU trade deal, in effect, nullifies Bangladesh's zero-tariff arrangement with Belgium because Indian exporters now also enjoy lower tariffs on some products in Europe. Australia, the UK, and Canada's membership of the Comprehensive and Progressive Agreement for Trans-Pacific Partnership (CPTPP) enhances market access for the 12 countries involved in the deal compared to the least developed countries, none of which are part of it.

The death of the rules-based order

At the Davos meeting of the World Economic Forum in January, Canadian Prime Minister Mark Carney crystallised the hypocrisy. Carney, former governor of the Bank of England and Canada, pronounced the rules-based international order dead. He compared the system to "living within a lie" under the former Eastern Bloc countries, where the system only preserved itself because everyone else pretended to support it.

"The system's power comes not from its truth but from everyone's willingness to perform as if it were true. When even one person stops performing ... the illusion begins to crack." The former Goldman Sachs

banker continued: "We knew the story of the international rules-based order was partially false." But if you knew it was false, why did you promote it, benefit from it and shape it? If you knew the system you were promoting was a lie designed to benefit the rich while exploiting the poor, did all your rich, powerful friends at Davos know it was a lie, too?

For decades, countries in the Global South were told that the rules-based order

Europe often touts itself as a 'development partner.'

Where was Europe as a partner when Trump was hammering the LDCs with tariffs? If Brussels had any muscles and meant what it said, it'd surely be pushing its interests. But no, in its feeble deal with the US, the EU managed to entirely forget about the impact on its supposed developing country sisters.

would make them prosperous. Join the WTO, open markets, and accept the dollar as the world's currency. The International Monetary Fund and the World Bank will manage the global economy. Everything will be OK. The system worked for the North and for some less advantaged countries. China's WTO membership in 2001 hyper-charged its headlong rush into international markets and sparked the biggest mass reduction in poverty the world has ever seen. Hundreds of millions of people who'd otherwise have toiled as subsistence farmers began to form a new middle class. China became the most successful capitalist growth story in history. In Bangladesh, crores of people moved out of extreme poverty in a couple of decades as relative economic stability and more open

markets allowed the ready-made garment sector to prosper, although that success story may now be wobbling.

But for many, the gains were far more patchy. About 15 to 18 crores more Africans are extremely poor now than in 1990. Poverty reduction across the globe has gone backwards since 2020. The international rules-based order paid scant attention to the environment. The rules worked very well for the beneficiaries at the top of the mountain, while only a select few from the majority world were allowed to clamber up onto its lower slopes. They always knew the story was false.

Forgetting the poor

This abandonment of the less advantaged comes at a time when they most need support. Tariffs on exports from the Least Developed Countries (LDCs) have soared to over 28 percent in the United States on a trade-weighted basis, up from about 2.8 percent before the Trump tariffs. Astonishingly, LDCs on average now pay *more than twice* the rate charged to developed countries to access the US market. This is simple victimisation. Countries like Bangladesh and Cambodia face tariffs worth half the value of their exports. This huge new tax is directly killing jobs and putting low-income people out of work in poor countries.

Europe often touts itself as a "development partner." Where was Europe as a partner when Trump was hammering the LDCs with tariffs? If Brussels had any muscles and meant what it said, it'd surely be pushing its interests. But no, in its feeble deal with the US, the EU managed to entirely forget about the impact on its supposed developing country sisters, landing them in a worse position than itself.

My friend from Lesotho told me that a government delegation was rebuffed in its efforts to negotiate with a visiting US trade team in neighbouring South Africa. A quick phone call from the EU ambassador might

have helped.

The end of aid?

This process of desertion by the middle powers has a longer background: 22 countries have chopped tens of billions of dollars off official development assistance since 2023. The latest is the UK, which last month slashed official development assistance to less than 0.3 percent of gross national income—the steepest cut of any G7 economy and more than halving the level from its peak three years ago. Africa faces the worst cutbacks. A 40 percent decline in UK aid to the continent will take bilateral assistance to its lowest level since the 1970s, in effect unwinding decades of supposed commitment to the world's poorest.

The UK is hardly alone: Sweden, Germany, France, the Netherlands and other EU donors have also found themselves becoming less generous in recent years as they rediscover an appetite for war and austerity.

At a time when their supposed adversary, Trump, "threw the US Agency for International Development into the wood chipper," this seems a particularly bad moment to suck much-needed cash out of the Global South. It's strange how the so-called middle powers criticise Trump, then in some areas copy him.

It's also an own-goal. It'll erode whatever mild influence these governments wielded abroad. Fed up with the hypocrisy, governments from Nairobi to Dhaka are going their own ways or siding with China, which has abolished taxes on their exports and has spent the past decade or more spending a trillion dollars on useful things like building bridges, roads and ports.

Of course, many of us knew that the rules-based order was a lie, but now the truth is clear, as even its former proponents admit. And if there are middle powers, there must be higher powers and lower powers. It's a sad admission to rank the world's countries based on power rather than rules or justice.

'PHOTOSEUM: LIFE OF POETREE': Nasir Ali Mamun's rhythmic lens on display

PHOTOS: ABRAR FAIYAZ NILOY

Mamun urged the younger generation to take part in a cultural movement that protects photography and honours those behind the lens, saying, "The GenZ youths who made the uprising possible are capable of working toward safeguarding the photo museum."

NAVEEN ISLAM TOREE

The evening of April 3 marked the opening of the 66th solo exhibition of acclaimed photographer Nasir Ali Mamun, titled *Photoseum: Life of Poetree*, at La Galerie, Alliance Française de Dhaka.

The exhibition brings together two of Bangladesh's most profound poetic voices—Shamsur Rahman and Al Mahmud—through a deeply visual dialogue. More than a photographic display, it invites viewers into an intimate encounter with literature, where poetry is not read but felt.

The inauguration ceremony, held at 6:00pm, was attended by a distinguished gathering of cultural figures and dignitaries, including Motiur Rahman, editor and publisher of Prothom Alo; Jean-Marc Séré-Charlet, Ambassador of France to Bangladesh; and eminent artist Monirul Islam.

Mamun, often described as the "poet of the camera", has spent decades capturing the essence of

cultural icons. In this exhibition, his lens turns toward the inner worlds of Rahman and Mahmud—not merely documenting their likeness, but revealing the emotional and philosophical landscapes that shaped their words.

Opening the ceremony, Mamun shared his personal experiences with both poets, recalling moments from his life, including his time in prison. He talked about the distant and complex relationship between Rahman and

Mahmud. Even though they rarely shared the same space, Mamun said that his work connects them through photography and experience. He described the photographs as a "museum of memories." He recognised the families of both poets and hoped that the exhibition honors their legacy.

He also shared how his friendship with the poets shaped the project, and mentioned the enthusiasm of Motiur Rahman in publishing stories surrounding

their lives and works. Despite the challenges posed by the poets' ideological differences, Mamun worked with them individually, creating a tribute that bridges their separation.

Emphasising the importance of preserving visual history, Mamun called for greater recognition of photographers, even after their passing. He urged the younger generation to take part in a cultural movement that protects photography and honours those behind the lens, saying, "The GenZ youths who made the uprising possible are capable of working toward safeguarding the photo museum."

What makes the exhibition particularly compelling is its ability to transcend biography. These are not merely portraits of two literary giants, but studies of presence, memory, and influence. The interplay of light and shadow, combined with minimal compositions, strips away distraction, leaving behind something deeply human.

As speakers reflected on Mamun's lifelong contribution to documenting Bangladesh's intellectual and artistic heritage, the evening came to a close with a full house feeling more connected to the lives and legacies of these remarkable poets.

Running until April 16, *Photoseum: Life of Poetree* is as much about photography as it is about connection—between art forms, between artists, and ultimately, between the viewer and the language of the human spirit.

Multiplexes suspend evening shows amid new govt directives

Amid a global energy crisis linked to ongoing conflict in the Middle East, the government enforced new fuel-saving measures, including reduced office hours and a directive to close shops and malls by 7:00pm.

In response, Blockbuster Cinemas at Jamuna Future Park announced on April 4, that all evening screenings were suspended from April 5 until further notice. Authorities confirmed that customers with advance bookings for affected shows would receive full refunds.

The cinema chain expressed regret over the inconvenience and sought public cooperation. Meanwhile, Star Cineplex also suspended shows, adding that further updates would be shared through their website.

WHAT'S THE HAPS?

'Surongo'

Ethic Theatre presents the sixth staging of *Surongo*, adapted from Syed Waliullah's sharp exploration of greed and illusion. Directed by Mintu Sardar, the play follows a young woman drawn into a quiet but unsettling mystery, where buried desire and deception slowly reveal a harsher, inescapable truth.

DATE: TUESDAY | APRIL 7, 2026

NEWS

Factory was sealed

FROM PAGE 12
owner Md Akram Ullah Akram, 64; his son Ahnaf Akram, 34; Iman Ullah; and around seven unidentified individuals.

During a visit to the site yesterday afternoon, firefighters were seen continuing rescue operations. Several factory workers and anxious relatives were still gathered at the scene in search of their missing loved ones.

Shipon Mal was looking for his nephew, Nirob Dhali, 17, who joined the factory just a day before the fire. He has been missing since the incident.

"We searched everywhere possible after the fire but could not find him. We also spoke to the authorities, but they were unable to provide any information about his whereabouts."

Alo Rani Dey, a worker who survived the fire, said the factory once caught fire in 2024 but resumed operations shortly afterwards.

Of the six bodies recovered, three have been handed over to their families, according to sources at Sir Salimullah Medical College morgue.

One of the victims has been identified as Mim Akter, 16.

Two other bodies were handed over based on information provided by family members. DNA samples have also been collected to confirm their identities.

Sabbir, who received the body of his mother Manju Begum, said, "My mother had the keys to our house in her hand, and part of the clothing on her back was not burned. I recognised her from these."

He added that the hospital authorities handed over the body based on his statement, but asked them to provide DNA samples for confirmation.

According to the case statement, the factory had been operating illegally in a densely populated area for the past eight to 10 years, employing around 50 to 60 workers, including women and children.

Law enforcement agencies conducted multiple drives in the past and shut down the factory. However, the accused resumed operations later.

Investigators also found that no fire safety measures were in place despite the use of highly flammable materials, the case statement added.

Rafiqul Islam, investigation officer of the case, told this newspaper that efforts were underway to arrest the other accused.

Special drive in four cities

FROM PAGE 12
be rolled out simultaneously across the rest of the country, he said.

He blamed mismanagement by previous governments for the measles outbreak.

Meanwhile, MA Muhit, state minister for health, inaugurated the vaccination programme at Bhawal Mirzapur Union Council in Gazipur.

UNICEF is deeply concerned about the sharp rise in measles cases across Bangladesh, putting thousands of children, especially the youngest and most vulnerable, at serious risk, said Rana Flowers, its representative in Bangladesh.

"This resurgence highlights critical immunity gaps, particularly among zero-dose and under-vaccinated children, while infections among infants under nine months, who are not yet eligible for routine vaccination, are especially alarming," she said, according to a UNICEF press release.

With coordinated action, this resurgence can be contained, she said, adding that UNICEF is working closely with the government and partners to reach every child, close immunity gaps and protect children from this preventable disease.

By targeting children aged 6 to 59 months in high-risk areas, followed by nationwide scale-up, this campaign will help prevent further tragic loss of young lives and close the immunity gaps driving the outbreak, said

Bangladesh not bound

FROM PAGE 12
Khalilur and the PM's Adviser on Foreign Affairs Humayun Kabir were present at the meeting.

The foreign minister said claims that Bangladesh "needs permission" from the US to import oil under any agreement are "completely false".

He added that sanctions on Russian oil apply globally, and any required approvals stem from those sanctions, not from any trade agreement between Bangladesh and the US.

On energy cooperation, Khalilur said some aspects could not be disclosed due to confidentiality, but added that the US assured support to help ensure Bangladesh's energy security.

Replying to a question about whether the US could assist Bangladesh in tackling the current energy situation, he said the

Ahmed Jamsheed Mohamed, World Health Organisation representative in Bangladesh.

Meanwhile, 10 more suspected measles deaths have been recorded in the 24 hours until 8:00am yesterday. In addition, five previously unrecorded deaths were added to the tally, taking the total number of suspected deaths to 113, according to the Directorate General of Health Services (DGHS).

DGHS, however, said a total of 17 deaths have so far been confirmed as measles-related.

Asked about the reasons behind the large gap between suspected and confirmed measles deaths, a DGHS official said that samples from suspected measles patients are tested at the reference laboratories in Dhaka, which take a significant amount of time.

In the meantime, the number of suspected cases is included in the list, while confirmed cases are updated later, resulting in a discrepancy between the two figures.

Besides, rash and fever, the main symptoms of measles, are common to several other diseases, he said.

Therefore, not all suspected measles cases are ultimately confirmed, which contributes to the difference between suspected and confirmed deaths, he added.

A total of 974 new suspected cases were recorded in the last 24 hours, taking the tally to 7,610.

government is exploring multiple sources for energy imports and will procure oil from the most cost-effective options.

India, the Middle East, and the US remain open alternatives, he added.

The minister further said the government's priority is to maintain a stable energy supply and ensure national energy security by sourcing fuel from the most competitive and affordable options in the global market.

During the meeting, the US ambassador handed over two photographs and a replica of the White House to the prime minister. One photograph features Shaheed President Ziaur Rahman and former US President Jimmy Carter, while the other shows former Prime Minister Khaleda Zia and former US President George Bush Sr.

House ratifies ordinances on govt job age

FROM PAGE 12

The special committee has submitted a report on 133 ordinances, some of which have been allowed to lapse. These ordinances are significant and connected to the spirit of July. He said they wanted to discuss the matter in the House.

Law Minister Md Asaduzzaman responded by saying that every ordinance would be brought before parliament and there would be opportunities for discussion. He added that the two bills introduced had been unanimously recommended by the special committee for unconditional passage.

AGE LIMIT

In the statement of objectives and reasons for the bill, Bari said the ordinance was issued in response to demands to raise the age limit for entry into government service and in recognition of its necessity. It increased the age limit for direct recruitment by two years, setting it at 32.

However, in some recruitment rules, the age limit for entry into

government service was set at 33-45, which created complications. To resolve these complexities, the ordinance was further amended in 2025.

The state minister explained that as a constitutional body, Bangladesh Public Service Commission has already issued circulars keeping the maximum age limit for direct recruitment in the Bangladesh Civil Service (BCS) at 32 years, and recruitment is ongoing accordingly. Therefore, it is necessary to turn the ordinance into law.

Under this law, the maximum age limit for entry into all BCS cadres and all non cadre government jobs will be 32 years. In addition, for direct recruitment to posts in autonomous bodies, statutory authorities, public non-financial corporations, and self-governed institutions, the age limit will also be 32 years.

Government Service Act
In 2025, the interim government amended the Government Service Act and issued an ordinance. Later,

another amendment was made through a second ordinance. Keeping those amendments intact, State Minister Bari placed the Government Service (Amendment) Bill-2026 in Parliament.

The bill introduced special provisions regarding the conduct and penalties of government employees. It states that disobeying lawful orders of superiors, failing to comply with government orders, circulars, or directives without legal cause, obstructing their implementation, or inciting other government employees to do so will be considered misconduct.

Collective absence from duty or refusal to work without leave or reasonable cause will also be treated as disruptive misconduct. Preventing any government employee from attending work or performing duties will likewise be deemed misconduct.

For such misconduct, the law provides for demotion to a lower post or pay grade, compulsory retirement, or dismissal from service.

Ordinance flawed, there will be

FROM PAGE 12

If the government wants to make changes, it should first approve the ordinance, turn it into law and amend it later, he said.

"But if that is not done, then once the law expires on April 11, there will be no legal definition of enforced disappearance from April 12," he said.

In reply, Asaduzzaman said the way the ordinances of the Human Rights Commission and Enforced Disappearance Prevention have been framed would be unjust to victims of enforced disappearance.

The ICT Act already included the definition of enforced disappearance under crimes against humanity. The law did provide for trials and investigations of the crime.

"At the same time, in the enforced disappearance ordinance, we are proposing a separate investigation process. Under the ICT Act, the maximum punishment for perpetrators of enforced disappearance is either the death penalty or life imprisonment. But in the ordinance on enforced disappearance, the maximum sentence has been limited to 10 years."

If the Human Rights Commission ordinance is kept in its current form,

victims of human rights violations will face additional harassment and further violations in the name of investigation because of the time frame stipulated in the law, said Asaduzzaman, who was previously the Human Rights Affairs secretary of the BNP central executive committee.

Home Minister Salahuddin Ahmed, also a victim of enforced disappearance, recounted his days awaiting death, and spoke about how he was then dumped in a neighbouring country where he faced trial, and eventually returned to Bangladesh.

"There is no reason to think that those responsible for enforced disappearance will be able to slip through the cracks of the law. That is why we have said: the punishments prescribed in the enforced disappearance ordinance, the investigation procedures mentioned there and the provisions in the ICT Act regarding crimes against humanity must not conflict with one another. For this reason, these laws need careful scrutiny," he added.

Speaker Hafiz Uddin Ahmad said the matter raised by the Jamaat MP Ahmad was "very important".
"The law minister has assured

us that a stronger law to prevent enforced disappearance will be introduced later."

Many prominent individuals and innocent political activists have been victims of enforced disappearance, he said.

"We hope that the government, ruling party members and opposition members together will enact such a strong law that no citizen will ever again fall victim to enforced disappearance. Please be patient. This parliament will surely pass such a law."

Global oil shock

FROM PAGE 12
Countries have begun releasing a historic amount of oil from emergency stockpiles to offset the war's impact. But much of the broadening supply crunch stems from a shortage of naphtha, a petroleum by-product and critical feedstock for synthetic materials, of which producers have far fewer reserves and no substitute.

Some petrochemical companies in Asia, which gets more than half its naphtha from the Middle East, have cut output or declared force majeure in recent weeks due to limited raw materials.

Two children drown in Ctg

STAFF CORRESPONDENT, Ctg

Two children drowned in a water-filled pit created by soil extraction for brick kilns in Chatogram's Fatikchhari yesterday.

The deceased are Farzana Akter, 9, a third-grader at a local madrasa, and Sanjida Akter, 7, a pre-primary-level student, both from the same village.

According to police and locals, the incident occurred in West Harualchhari village under Harualchhari union around noon, when the children were playing beside the pit. At a point, the duo slipped into the water and drowned.

A third child, who was with them, ran to inform family members. Relatives recovered both children and took them to a upazila health complex, where doctors declared them dead, they said.

Bhujpur Police Officer-in-Charge Bipul Dey confirmed the incident, saying the bodies were handed to the families without an autopsy since no complaint was filed.

Salauddin Ziku, a Fatikchhari journalist, said over 50 brick kilns - mostly illegal - have been set up in the upazila.

Elephant calf stoned to death in Bandarban

Says postmortem report

SIFAYET ULLAH, Ctg

A three-month-old elephant calf found dead in a reserve forest in Naikhyangchhari upazila was killed by stone blows, according to a post-mortem report.

The calf's body was recovered on the afternoon of April 2 from an illegal fish enclosure and later buried under the Rajarkul Range of the Cox's Bazar South Forest Division.

The postmortem, conducted by a veterinary surgeon at Dulahazara Safari Park, found multiple injury marks and said the animal suffered a brain haemorrhage from repeated stone blows. It added that infections from the wounds could have led to septicaemia,

contributing to its death.

Forest officials said preliminary findings suggest miscreants threw stones at the calf, and three suspects have been identified.

However, no case has been filed yet due to a jurisdictional dispute between the Naikhyangchhari Range in Lama and the Rajarkul Range.

Rajarkul Ranger Abiuz Zaman said a case would be filed once the boundary issue is resolved, while Naikhyangchhari Range Officer Tanvir Khalil Chowdhury said the site is unlikely to fall under his jurisdiction.

The calf's death triggered a heartbreaking scene, as an adult elephant pair stayed beside the body for three days, apparently mourning.

Indonesia lays to rest peacekeepers killed in Lebanon

AFP, Bandung

Three Indonesian peacekeepers killed in two separate explosions in southern Lebanon last week were laid to rest in their hometowns yesterday.

Peacekeeper Farizal Rhomadhon, 28, died when a projectile exploded on March 29 in southern Lebanon, where Israel and Hezbollah have been fighting since Lebanon was drawn into the Middle East war.

Two other blue helmets, Zulmi Aditya Iskandar, 33, and Muhammad Nur Ichwan, 26, died a day later when an explosion struck a logistics convoy of the UN Interim Force in Lebanon (UNIFIL), also in southern Lebanon.

The deadly incidents sparked calls from Indonesian authorities for an investigation and security guarantees for peacekeeping forces.

The soldiers were buried yesterday in coffins draped in the Indonesian flag during military funerals with gun salutes.

German men must inform military of extended foreign trips

AFP, Berlin

A new German military service law will require most young men to inform authorities when leaving the country for long periods, with a newspaper report on the little-noticed provision prompting widespread debate.

The defence ministry confirmed to AFP on Saturday that men from the age of 17 "are required to obtain prior approval" from the German armed forces for foreign stays lasting longer than three months.

Approval will be granted as long as "no specific service as a soldier is expected during the period in question," a ministry spokesman told AFP.

"The background and guiding principle of this regulation is to ensure a reliable and informative military service record in case of need," the spokesman added.

The ministry is drafting exemptions to the exit permit requirement and a system for approving requests, aiming to "avoid unnecessary bureaucracy," the spokesman said.

A Frankfurter Rundschau newspaper report on the regulation on Friday prompted widespread social media discussion, with many people questioning whether it was real and why there was no public debate when military service reforms were proposed last year.

No breakthrough in House yet

FROM PAGE 1

annulled. "Through amendment, the constitution can be changed."

Opposition leader and Jamaat Ameer Shafiqur Rahman questioned why a new adjournment motion was introduced when a similar one had already been placed by him.

"If one motion already exists, why has another been introduced? Can such an adjournment motion even be tabled? If not, this motion has no claim to discussion. I demand that it not be taken into cognisance."

In his ruling, Speaker Hafiz Uddin Ahmad said that under parliamentary practice both adjournment motions had been discussed.

Shafiqur proposed forming a special parliamentary committee to convene the Constitution Reform Council, which he discussed in parliament on March 30.

He stressed that the opposition is not against amendments, pledging full cooperation in constitutional reform and lawmaking.

Shafiqur rejected allegations that they want to discard the constitution, saying they seek changes to build a just society free from fascism.

"We want a future Bangladesh where no fascism can return under the pretext of the constitution or law. We want to bury fascism," he said.

Law Minister Md Asaduzzaman addressed questions over the method of implementing the July charter, saying

the procedure is already outlined in the charter itself and no additional mechanism is required.

Referring to the charter as a reflection of the people's will, he said every layer of the document is rooted in the constitution. "Every amendment is a reform, but not every reform is an amendment," he noted.

He further described the July National Charter Implementation Order 2025 as a fraud against the constitution, arguing that any law which appears valid but lacks proper legal authority is entirely invalid.

National Citizen Party lawmaker Akhter Hossen accused the BNP of refusing to accept the outcome of the consensus commission, which had agreed on a roadmap for implementing the July charter.

"But today, it is with deep regret that I must say the BNP is refusing to accept that outcome. The horse of reform has already galloped far ahead, but now attempts are being made to rein it in."

He outlined five stages: charter, orders, ordinances, referendums, and the Constitution Reform Council. "The ruling party members present here do not speak of orders, ordinances, referendums, or the reform council -- they only speak of the July charter."

He recalled that the joint charter was signed outside parliament, noting that earlier copies carried no dissent and demanding investigation into who added dissenting notes.

"The home minister and law minister repeatedly refer to the notes of dissent. This is not a matter up for debate. The steps for implementing the July charter have already been completed in the consensus commission. Therefore, I humbly urge that the proposal brought today should not be accepted," he said.

Bangladesh Jatiya Party MP Andaleev Rahman Partha said provisions of the July charter should be incorporated into the constitution in accordance with constitutional norms.

"So I feel that there is some playing with words going on here, misleading the nation, and, as I said earlier, attempts are being made to pit us against July," he said.

Twice on Sunday afternoon, microphone malfunctions in parliament disrupted proceedings and frustrated lawmakers. As a result, the session was briefly suspended before the adjournment motion discussion could begin. Speaker Hafiz Uddin Ahmad directed an investigation into the technical failure.

Later, near the end of the discussion, another glitch occurred while Salahuddin was speaking, forcing him to continue his remarks without a microphone.

During the Maghrib prayer break, as NCP MP Akhter Hossen was leaving the House, he apparently got into an altercation with several individuals in the gallery. The details of the incident, however, remain unclear.

EC weighing

FROM PAGE 12

The machines are currently stored at multiple locations, including 86,233 units at Bangladesh Machine Tools Factory (BTMF).

Asked whether the EC would pay the Tk 70.40 crore claimed by BMTF as warehouse rent for the machines, Masud said, "We don't know about this [warehouse rent] at all. We haven't received anything in writing. So, I doubt whether we will take responsibility for this. The possibility of not taking it is higher."

BMTF had earlier written to the EC on December 15, asking it to clear the areas and vacate the warehouse.

Masud said, "We'll discuss these matters with the government. How we will dispose of them, or whether the EVMs can be used for any other purpose, the government may decide. The government can dispose of them, or it may ask us to do so, and we will, but we first have to fix a method for doing so."

The EVM project ran for five years and was later extended by another year before expiring in June 2024.

Ahead of the 13th national election, the Electoral Reform Commission recommended against using EVMs. In August last year, the EC had proposed and later amended the Representation of the People Order to not use the machines in polls.

Md Abdul Alim, member of the now defunct Electoral Reform Commission, said EVMs had earlier proved flawed in counting votes.

"Many EVMs have already broken down and are lying unused. That is why moving forward with these machines is not logical... These were purchased, used in elections, and are now lying idle... This is a waste of public money. The election commission should quickly decide what to do with these."

Request for Expression of Interest (EoI) for Selection of Consultant Firm/ Organization (National)

1.	Ministry/Division	: Ministry of Environment, Forest and Climate Change
2.	Agency	: Department of Environment (DoE)
3.	Procuring Entity Name	: Project Director
4.	Procuring Entity District	: Dhaka
5.	Expression of Interest for	: Consultant Firm (National)
6.	Title of Service	: Development of Biodiversity Register for Halda Biodiversity Heritage and Morjat Baor Ecologically Critical Area (ECA)
7.	EoI Ref No	: 22.02.0000.045.14.015.25-521
8.	Date	: 05 April 2026
Key Information		
9.	Procuring Method	: Quality and Cost Based Selection (QCBS)
Funding Information		
10.	Budget and Source of Funds	: Global Environment Facility (GEF)
11.	Development Partners	: GEF-UNDP
Particular Information		
12.	Project Code	: 223053500
13.	Project Name	: Implementing Ecosystem-based Management in Ecologically Critical Areas in Bangladesh Project
14.	EoI Closing Date and Time	: 26 April 2026, 02:00 pm
Information for Applicants:		
15. Eligibility of the Consulting firm/organization:		
a) The consulting firm must have minimum 10 years of experience in biodiversity conservation, natural resource management, ecosystem assessment, or related areas.		
b) Experience in conducting biodiversity assessments, biodiversity registers, or ecological studies.		
c) Successful completion of at least two similar assignments in the last 10 years.		
d) Submission of latest audit reports showing financial capacity.		
e) Submission of bank solvency certificate and financial statements.		
f) Submission of VAT registration, Tax identification certificate and updated tax payment documents.		
g) Valid trade license and registration documents.		
16. Other Details (if applicable): The Terms of References (ToR) for the services including the scope of works, deliverables, team composition with educational qualifications, and experiences are available on the DoE's official website (www.doc.gov.bd). Applicants are advised to provide all the necessary information and proven documents with a cover letter. One original and two copies of the EoI must be submitted in a sealed envelope and be clearly marked the title of service for the EoI.		
Procuring Entity Details		
17.	Name of Official Inviting EoI	: Farhana Mustari
18.	Designation of Official Inviting EoI	: Project Director, Implementing Ecosystem-based Management in Ecologically Critical Areas in Bangladesh Project
19.	Address of Official Inviting EoI	: Department of Environment 8 th Floor, Room: 903, Poribesh Bhaban New Building E/16 Agargaon Administrative Area Sher-E-Bangla Nagar, Dhaka-1207
20.	Contact details of Official Inviting EoI	: Phone: +880-22222218305, Email: fimmunni@yahoo.com
21.	Place of submission of EoI	: Office of the Project Director, Implementing Ecosystem-based Management in Ecologically Critical Areas in Bangladesh 8 th Floor, Room: 903, Poribesh Bhaban E/16 Agargaon Administrative Area Sher-E-Bangla Nagar, Dhaka-1207
22.	The procuring entity reserves the right to accept or reject all EoIs.	

The Department of Environment (DoE) is implementing a project titled "Implementing Ecosystem-based Management in Ecologically Critical Areas in Bangladesh". The project aims to apply an ecosystem-based framework for managing Morjat Baor Ecologically Critical Areas (ECAs) in Jhenaidah and proposed Biodiversity Heritage Halda river in Chittagong in Bangladesh to enhance the conservation of globally significant biodiversity and support local livelihoods. The Project period is July 2024 to June 2029.

Dhaka Wasa turns

FROM PAGE 3

operational, the projects are expected to add nearly 95 crore litres of water daily.

However, both remain far from completion even after years of work.

According to the Wasa sources, only around 50 percent of the Gandharbpur project has been completed over the past decade, while progress on the Saidabad Phase 3 project stands at just about 20 percent.

This slow pace has significantly contributed to the growing supply gap in the capital, they said.

Experts, however, view the new "emergency" project as a stopgap measure.

Former Wasa chairman Ghulam Mostafa told The Daily Star that concerns over excessive groundwater extraction date back to 2009-10. He noted that the water table is falling by about one metre each year, driving up costs and risking a deeper crisis.

Wasa officials insist the project is a necessity as water demand in Dhaka is rising rapidly, while large projects face delays.

Abdul Majid, the project's focal person, said the crisis could worsen without additional supplies during this interim period. "The initiative is both interim and essential," he said.

He said Dhaka's daily water demand is about 320 crore litres, with 70 percent currently supplied from deep tube wells. The proposed project will add 57 crore litres per day.

He added that rehabilitating old infrastructure and using modern technology would improve system efficiency.

Projections show Dhaka's water demand may reach 360 crore litres per day by 2029 due to population growth and urbanisation.

To meet the demand, the project plans to replace 388 deep tube wells, install 62 new ones, regenerate 280 wells, and rehabilitate 60 others.

It also includes installing 44 iron removal plants, 250 pump houses, and expanding pipeline and

electrical infrastructure. A SCADA system will be introduced for real-time monitoring.

A feasibility study by the Institute of Water Modelling found the project viable, with a benefit-cost ratio of 1.34 and an internal rate of return of 18.91 percent.

However, experts warn that financial viability does not ensure sustainability without timely implementation and proper planning.

They say completing existing projects on time could have avoided the need for repeated interim measures, reducing costs and stabilising the system.

Urban planner Prof Adil Mohammed Khan criticised the project as "self-defeating".

He said Wasa's original goal was to reduce groundwater dependence, but failure to complete ongoing projects while returning to large-scale extraction is unsustainable.

He warned that groundwater levels have already dropped significantly, and such initiatives will only prolong the crisis. "The government should prioritise completing ongoing projects instead of allocating such a large budget for interim measures," he said.

If approved, the project will cover around 361 square kilometres across the Dhaka North and South city corporations.

Experts say isolated measures will not resolve the water crisis and call for a coordinated, long-term strategy.

Ghulam Mostafa said, "Public money is being wasted due to delays in major projects. Such interim projects will increase costs and harm the environment."

SOURCE: ISLAMIC FOUNDATION

“Islamisation in Bengal has no parallel in South Asia”

Richard M. Eaton, Professor of history at the University of Arizona and a leading historian of Bengal and modern South Asia, speaks to The Daily Star about his book *The Rise of Islam and the Bengal Frontier, 1204–1760*, widely regarded as a seminal work on Bengal.

West and East Bengal had different religious histories owing to the timing of the arrival of Brahmanical culture from upper India. Simply put, by the time Muslim rule reached the region, Brahmanical culture had already penetrated more deeply in the west than in the east, making the latter region more receptive to a scripturally based religion like Islam.

The Daily Star (TDS): Before your intervention, the dominant idea about conversion in Bengal was that people moved from Hinduism to Buddhism and finally to Islam, with earlier scholarship commonly suggesting that the masses embraced Islam to escape the Hindu caste system. What prompted you to challenge this narrative and shed new light on the process?

Richard M. Eaton (RME): What prompted me to challenge the narrative you mention was the discovery that, though it seemed plausible, it could not be supported by evidence. Chapter Five (pp. 113–34) in my book explains those flawed ideas in detail and why they do not work.

For many natives of rural eastern Bengal, Islam was the first scripturally and liturgically based religion to which they had been exposed. Of course, Buddhist and Brahmanical cultures had already penetrated eastern Bengal to some extent, but not as much as in the western delta, and in any case, in the east they tended to be mainly urban and elite-based. There were also Goddess and other cults in the region, but they lacked scripture and liturgies.

What written texts like the Qur’an and Hadith provided was a firm structure to religious belief and practice. It also helped that the technology of paper arrived in Bengal not long after the establishment of Muslim rule.

TDS: Before the first census in 1872, there was no clear idea that Muslims formed a numerical majority in Bengal, a fact that later became politically decisive. Do you think the idea of a Muslim majority in Bengal has been retrospectively framed in teleological terms, particularly in relation to the creation of Pakistan and, later, Bangladesh?

RME: For more than a century, the British had practised classic “divide-and-rule” tactics to govern India, cynically promoted in the name of political “balance”. As ever larger groups of Indians were enfranchised into the electoral system, competition between religious communities dramatically intensified. In their haste to abandon India after the Second World War, the British, out of sheer expedience, succumbed to the respective demands of the League and the Congress. That was when the religious map of British India, based on the 1931 Census, became fatefully decisive.

TDS: What challenges did you face while researching such a vast region, with its land records, literary archives, evidence of geological shifts, and changing ecological and agricultural patterns? How did the Weberian method help you address these difficulties?

RME: Weberian sociology has always influenced me, but the school of historical theory that influenced me the most was the French Annales School, especially the work of Fernand Braudel. He was the one who understood history not as a function of any single discipline—politics, geography, literature, sociology, religion, architecture, environmental studies, and so on—but rather as the product of all of them interacting with each other. To understand religious change, therefore, it is not enough simply to study religion; one must understand all the other aspects of culture and nature that shape and colour it.

TDS: How crucial were geographical factors in shaping Bengal’s history, culture, agriculture, and landscape, especially after the Padma shifted its main course away from the Ganga following a major earthquake? Why was West Bengal’s experience of conversion different from that of East Bengal in terms of religious composition?

RME: Geographical and climatic factors are fundamental to Bengali history. All Bengalis understand how the entire delta is subject to immense wealth, given its plentiful water and rich topsoil, but also to the immense power, danger, and fickleness of

The Shatgumbad Mosque, or the Sixty Dome Mosque, a prominent monument of the Bengal Sultanate era, remains one of the most striking Islamic structures in the Indian subcontinent. PHOTO: MOZAH MAHMUD/WIKIMEDIA

the monsoon. Additionally, the rivers constantly shift, abandoning splendid cities, leaving them with stagnant and malarial waters, or opening up new areas for cultivation and population growth. As a result, the Bengal delta is one of the most geographically dynamic regions in the world.

West and East Bengal had different religious histories owing to the timing of the arrival of Brahmanical culture from upper India. Simply put, by the time Muslim rule reached the region, Brahmanical culture had already penetrated more deeply in the west than in the east, making the latter region more receptive to a scripturally based religion like Islam. For comparison, consider India’s north-eastern corner (Nagaland, etc.), where Christianity in the 19th century had an enormous impact on local communities that had not already been exposed to Hindu, Buddhist, or Muslim influence. By contrast, Christian missions failed in India’s great plains, long populated by Hindus and Muslims.

TDS: Could you elaborate on the patterns of conversion in Bengal in comparison with other regions of the Indian subcontinent, highlighting both similarities and differences? How might we explain Islam’s deep penetration into rural Bengal, marked by its riverine geography, when in earlier periods its principal centres of influence were urban, such as Delhi, Agra, Bijapur, Lucknow, or Bihar Sharif?

RME: Islamisation in Bengal, in my view, finds no parallel elsewhere in South Asia. Central to its pattern was the overlapping of agrarian expansion, deforestation, and the Mughal government’s policy of “settling” their eastern frontier. This they did by giving land grants to pioneers who were required to cut the forest, mobilise labour for rice cultivation, and build on their lands either mosques or temples, simple structures made of thatching and bamboo. The purpose of such institutions was to promote stability in frontier regions that were inherently turbulent. The Mughals were not concerned about the religion of those pioneers; their focus was on stability, revenue, and loyalty. But since most pioneers were Muslims, more mosques than temples were built.

I never found the terms *ashraf* or *atraf* in Mughal documents pertaining to land settlement. Those terms do not seem to have appeared until the British period, when many Bengalis, when asked by colonial officers about their origins, claimed that their ancestors were of high *ashraf* status.

Nor have I seen evidence of tension between migrant Muslim elites and local Muslims in the precolonial period, probably because Islamisation had been such a gradual and unselfconscious process. As you yourself noted, it was not until the 1872 census that people became aware of eastern Bengal’s substantial Muslim population.

TDS: Could you say something about the role of Sufis in agricultural expansion in the active delta, especially their active role as entrepreneur-pioneers with a religious calling, which is often linked to new Islamic conversions? At the same time, recent archaeological finds suggest that agriculture existed

even in the deep Sundarbans before the medieval period. So, what do you see as the main factors behind conversion?

RME: “Conversion” is a misleading term when reconstructing the growth of Muslim communities in Bengal, or anywhere else. Owing to its association with 19th-century Protestant missionary movements, “conversion” connotes a sudden and complete change in religious identity, as opposed to the gradual and unselfconscious religious change that actually occurred. Since this change was a gradual process, I consider the term “Islamisation” a more useful way to understand the phenomenon.

Sufis are understood as mystics who both practised and taught methods of achieving direct access to divine reality. The term *pir*, on the other hand, is associated with religious charisma, or “holymen piety”. Muslims capable of mobilising labour on the eastern frontier for the purpose of clearing forests and establishing rice cultivation were certainly charismatic. This is why

many of them were identified in both contemporary documents and Bengali folk literature as *pirs*. Over time, the vocabulary of popular Sufism stabilised the memory of such pioneers who had been instrumental in building new communities, which celebrated *pirs* as great *shaikhs*, even Sufis. Not infrequently, their graves became shrines (*dargah*) that attracted pilgrims and patronage, a process that illustrates Max Weber’s notion of the “routinisation of charismatic authority”.

It is true that recent archaeological excavations in the deep Sundarbans have discovered evidence of rice cultivation, Buddhist institutions, and possibly even seaports before Bengal’s Muslim period. What was new from at least the 16th century, however, was the association of the advent of agricultural operations with Muslim holy men (*pirs*), or with charismatic persons who were widely identified as such. Under their leadership, agrarian expansion either was initiated or, if it had already existed to some extent, was greatly intensified.

TDS: Apart from the expansion of agriculture, could you elaborate on the nature of Muslim rule in Bengal, with particular reference to patterns of patronage and the migration of Muslim populations from north to south? In this regard, how significant were sea and land trade routes, as well as the arrival of Afghans and Turks?

RME: The book describes how provincial and district officers of the Mughal Empire issued land grants to men willing to undertake the clearing of forest and the establishment of rice cultivation, on the condition that they build a mosque (or temple) and pray for the empire. As eastern Bengal became wealthy owing to the expansion of rice cultivation, Chittagong became especially important for exporting rice throughout the Bay of Bengal, as far east as the East Indies and as far west as Goa. Before the Mughal period, first Indo-Turks and then Afghans established the Bengal Sultanate, which created direct ties with Upper India, as well described by M.R. Tarafdar.

As for the Palas and the Senas, agrarian expansion, accompanied by social integration and stratification, had been under way in northern and western Bengal between the 6th and 11th centuries. Acting on their own authority, or that of the Pala state after the 8th century, local magnates mobilised indigenous non-sedentary forest tribes as agricultural labourers for large-scale works such as draining ponds, excavating tanks, and clearing forest tracts. These same notables enhanced their prestige by patronising the construction of Buddhist monasteries or Brahmanical temples. These themes would resonate several centuries later, when a different cadre of notables mobilised labour, again for agrarian expansion, while also patronising the construction of religious institutions, which in their case were mainly mosques. We also know that non-Muslim edifices continued to be used well after the Turkish conquest, refuting any idea that that conquest might have led to a rapid change in the region’s religious culture.

TDS: Do you think that a larger number of people came into contact with Islam during the Mughal period, while the Sultanate period saw comparatively less expansion? If so, to what extent did Islamisation take place during these two periods of Muslim rule in Bengal, considering their different state policies?

RME: Yes. The evidence for the Sultanate period is very scanty, compared with the rich documentation we have for the Mughal period. So, it might appear that Islamisation was more pronounced in the 17th and 18th centuries. On the other hand, we have literary evidence reaching back to the Sultanate period for pioneering *pirs* associated with both rice cultivation and Islam. So, it seems reasonable to assume that the process of Islamisation in the eastern delta had begun well before the Mughals.

TDS: Our contemporary understanding of secularism and tolerance did not exist in the same form during the medieval period. In that context, how would you characterise the Muslim sultans’ attitude towards non-Muslims in Bengal? How were relationships negotiated at the levels of state and society, particularly in light of records that mention instances of temple destruction or desecration, sometimes interpreted as symbolic assertions of political victory?

RME: M.R. Tarafdar has shown how Muslim sultans of Bengal integrated non-Muslims into their ruling structure.

As for “the role of Islamic religious creeds, rituals, and doctrinal

practices,” however, Ayesha Irani, Tony Stewart, and Thibault d’Hubert have all studied medieval Bengali literature in order to understand how Islamic creeds diffused among Bengali communities. For example, Irani has shown how, in the 17th century, Saiyid Sultan, author of the *Nabi Bamsa*, presented Islam as continuous with existing Bengali traditions by incorporating Hindu deities into the Abrahamitic “family of prophets”. That was an example of the sort of “creative adaptation” that gradually indigenised Islam in the precolonial period. For Sultan, Islamisation amounted to a recovery of the Bengalis’ own lost religious heritage. For his part, Stewart studied the various translation strategies by which medieval poets expressed Arabic-based Islamic ideas in the Sanskrit-based Bengali language. And d’Hubert studied the circulation of Bengali texts like the *Nurnama* among lower-strata communities in rural 17th- and 18th-century Chittagong, by way of understanding how such literature not only reflected but also deepened Islamic ideas among such communities.

TDS: Would you please explain more about the roots of Islam in eastern Bengal, as you describe in your book, particularly through the ideas of inclusion, identification, and displacement, and how these processes negotiated earlier literary, cultural, and religious identities?

RME: The categories of Inclusion, Identification, and Displacement refer to the stages in the way that a community might identify the superhuman agencies it venerated. Because the identity of the superhuman agencies venerated by a community necessarily reflects the religious identity of the community itself, it becomes possible to reconstruct changes in the community’s religious identity over time by establishing the approximate date on which texts mentioning those agencies were composed. Driving those changes were factors such as the expansion of agrarian society, the association of rice cultivation with charismatic Muslim pioneers, the diffusion of paper and literacy, which were necessary for a scripturally based religion, and, by the early 19th century, steamship and rail transport systems that facilitated the Hajj and thus “reform” movements. All of this suggests why Islamisation is better understood as a process, and not as an all-at-once event.

TDS: Finally, with the benefit of hindsight, what would you have done differently in your research and in writing *The Rise of Islam and the Bengal Frontier, 1204–1760* (1993), which remains one of the most comprehensive works on Bengal more than three decades on?

RME: Since my book was originally published, exciting discoveries have emerged in archaeology, a field that is far more developed today than when I wrote the book. Moreover, historians (myself included) have been slow to integrate archaeological insights into their work. Focusing on politics and political change, most historians tend to see sharp breaks in time or make the mistake of associating cultural change with political change. The title of my book includes two political dates, 1204 and 1706, suggesting that Islamisation suddenly “began” on the former date and ended on the latter, which is highly misleading, to say the least.

On the other hand, archaeological data relating to Bengal show much continuity over time, rather than sharp breaks, as well as considerable fluidity between and across cultural traditions. For example, the archaeologist Swadhin Sen has identified religious structures in Rangpur District that had been established and appropriated by various rival traditions, with Brahmanical structures appropriating Buddhist space, Vaishnavas appropriating Saiva space, and vice versa. So, if I were to write the book today, I would integrate much more archaeological data into the study.

I also regret that I did not subject West Bengal to the same degree of intensive research that I did in Bangladesh. I doubt that the book’s central argument would have been substantially different, but it might have benefited from more comparative evidence.

The interview was taken by Priyam Paul.

BCB in turmoil as resignations mount, probe adds pressure

SAMSUL AREFIN KHAN

Since returning from Melbourne in late March, Bangladesh Cricket Board (BCB) president Aminul Islam Bulbul has remained active in board affairs even as growing internal instability has continued casting a shadow over his tenure.

On Saturday, Bulbul spent nearly nine hours in the fourth board of directors' meeting at the BCB headquarters in Mirpur and the following day, he visited the national team's practice session at the Sher-e-Bangla National Cricket Stadium. Despite the outward appearance of routine operations, Bulbul's leadership is under increasing strain.

In recent months, seven board directors have resigned, with six stepping down within the last three weeks, of which four resigned following Sunday's meeting, highlighting deepening instability within the current administration.

Most outgoing directors cited personal reasons in their resignation letters, but while speaking to The Daily Star on condition of anonymity, many of them cited a variety of causes including frustration over their limited influence, lack of consultation in key decisions and feeling excluded due to not having political backing.

"It's not just one issue. There have been consistent problems in how we operate. Changes are made in departments without consultation, whether by the president or others. If we are not informed, what is our role?" one of them said.

However, the question remains whether uncertainty surrounding the future of the current board and internal political dynamics influenced the directors' decision to step aside.

Adding to Bulbul's concerns is a probe report submitted yesterday by a five-member investigation committee, led by retired Supreme Court justice AKM Asaduzzaman, to the National Sports Council (NSC). The committee was formed by NSC on March 11 to investigate alleged irregularities in last year's BCB elections.

"We submitted a neutral report without accusing anyone. It objectively analyses the election process and includes recommendations for ensuring smoother elections and necessary reforms," Asaduzzaman said.

State Minister for Youth and Sports Aminul Haque said the government would consult the International Cricket Council (ICC) before taking further steps. "The report was submitted this morning. We have already held an inter-ministerial meeting to discuss its findings. We will inform the ICC and then decide our next course of action," he told reporters at BKSP.

With mounting resignations, internal discontent, and the implications of the probe report, the BCB finds itself at a critical juncture and the coming weeks are likely to be decisive for both the board and its president. Bulbul, however, is ready to see the matter to the end, declaring in a recent interview that amidst this exodus of directors, "I will be the last person to go."

'Plenty of time left for politics, not much for cricket'

Bangladesh all-rounder Shakib Al Hasan, a former Member of Parliament in the ousted Awami League government, has not returned to the country following the fall of his party in August 2024. However, the current State Minister for Youth and Sports, Aminul Haque, mentioned that the 39-year-old cricketer – who is now staying with his family in New York – would be welcomed back once he is able to clear all legal hurdles. In an exclusive phone interview with The Daily Star's Ekush Tapader, Shakib spoke openly about his desire to return to the country, his political standpoint, and many other issues. The excerpts of the interview are as follows:

The Daily Star (DS): Having been out of the country for almost two years, how much do you miss home?

Shakib Al Hasan (SAH): Naturally, when someone is unable to go to his own country, he is bound to miss it. I am no exception; I miss the country immensely. I hope to return soon, and it will certainly feel great when that happens.

DS: What is the probability of you returning to Bangladesh?

SAH: I am hopeful. The legal processes have begun. If I can resolve things as quickly as possible... otherwise, it might take time. But I am trying my best to settle these issues quickly. The faster these matters are resolved, the sooner I can return.

DS: Are you in communication with the Bangladesh Cricket Board (BCB) or the Ministry of Youth and Sports?

SAH: From what I know, communication (with the Sports Ministry) is happening through BCB. I haven't had any direct contact. As for the BCB, sometimes there is communication, and sometimes there isn't. So, I am trying to handle everything on my own.

DS: What is your desire – returning to international cricket or retiring after playing a farewell match?

SAH: That is actually secondary. My first priority is returning to the country. I have seen in interviews and comments from the BCB and others that they want me to come and play. But since a legal process is ongoing, these things cannot just be said verbally; the issues must be resolved for me to return. Since I am far away, it would have been easier for me if the BCB had handled these matters on my behalf. I am not saying they haven't done anything at all, but if it had been done a bit better, there would have been a possibility of a quicker solution. Since that didn't happen and I am being delayed, I am doing my level best to find a solution.

DS: In what way would it have been easier if the BCB had stepped in?

SAH: If the legal processes were handled through the BCB, things could have been resolved much faster. Perhaps it isn't possible to do it that way. Since it is my matter, I have to do it myself. As I said, I will request [BCB] for any necessary help.

DS: There is currently a sort of instability within the BCB. Is it becoming difficult for you to maintain communication in this situation?

SAH: I am not communicating with any specific individual; I am maintaining contact with the BCB as an institution. It doesn't matter who is there or who will come; rather, I am communicating with that specific post or chair.

DS: Have you spoken with your teammates about the current state of the Bangladesh team and not getting to compete in the World Cup?

PHOTO: STAR

SAH: Yes, I talk to many of them. Many call me, and we talk. Not playing in the World Cup is definitely disappointing. The BCB cannot really speak against the decision the government took at that time. Because of the then government's decisions, Bangladesh could not play in the World Cup.

DS: As a former captain, how do you view the suspension of the Dhaka Premier League (DPL) and the conflict between the board and the clubs?

SAH: One thing I understand is that the only victims here are the players; no one else is suffering. I don't think anyone has the desire to understand the players' pain. Everyone is actually busy with their own power struggle and is using the players as tools... The biggest issue is that not playing the DPL is having a big impact on players' personal and financial lives.

DS: So, are the players helpless?

SAH: The players really have nothing to do. Suppose I am a club owner and I say I won't play. What can you do? If you are the BCB, at most you can request. Whatever everyone is doing, they are doing it to grab power. The BCB has a role to play here. It takes two to tango; it is happening from all sides. If there isn't sincerity to start the game, I don't see any chance of the league happening. The relationship has reached a point where it doesn't seem like anything will happen easily – unless it goes through the legal route.

DS: You have been playing in franchise leagues. How much longer do you want to continue playing?

SAH: My interest in the game is still as it always has been. The day I see that the interest is no longer there, I will step away.

DS: You entered politics but couldn't work for long. Do you think you will be able to resume your political career?

SAH: Politics can be done until death; there is plenty of time for politics. What I don't have a lot of time left for is cricket. I am trying to fix that first. As for politics, I believe it is a great platform from which significant changes can be brought. If I can do something for the people, I will feel good about it, and I still have that hope. I always will. Situations don't remain the same forever; they change. I hope a normal situation will return in the future where all parties will get equal opportunities and the people will decide who they want.

DS: How do you view the current situation in Bangladesh?

SAH: A new government has come, regardless of how it came. Immediately upon arrival, they face a massive challenge. At this moment, I feel their biggest responsibility is to work together with everyone. There is a difference between saying and doing. If they can work with everyone, Bangladesh can be freed from its problems. Although it is a global crisis, Bangladesh's crisis is even more severe than other countries – it is in the front row of crises. Here, everyone should work together. It is the responsibility of the politicians to bring back a sense of relief to the people of Bangladesh. I don't believe relief will return by pushing anyone away. And this doesn't happen in a democratic process either. I hope everything will be resolved soon.

DS: How do you view Prime Minister Tarique Rahman's urge for professional athletes to stay away from politics?

SAH: Look, I believe every citizen of Bangladesh has their own opinion on this matter. The Prime Minister has said what he felt was right from his position. It is his personal opinion, and I respect that.

DS: How are you spending your time nowadays?

SAH: Now it is just about giving time to the family. Spending time with family and getting the opportunity to think about the future – you could say that's a positive side in one way. Since our party doesn't have activities, I am trying to continue playing cricket. When the party activities start or we are able to do them, I might try to do politics again.

DS: Compared to the previous Sports Adviser's harsh stance, is the current Sports Minister's flexible attitude making your path back to the country easier?

SAH: I cannot say; we will understand whether it was easy or difficult while overcoming the legal hurdles. If I personally overcome the legal hurdles, then nothing else remains. I hope everything stays flexible. The main point is to overcome the legal obstacles. You are all seeing that the cases filed against me have no evidence, no basis – everyone is saying this. This has also come up in various news media. In Bangladesh, the system can wrap it up quickly or take a long time. It is a matter of goodwill. Just because you were attacked doesn't mean you should attack me too – I don't think that's right. If this continues, no change will come to the country. But I hope, the current government, which has been operating for a short period, will look at things neutrally, and those who are innocent will get proper justice. And it will happen within the fastest time. We must get out of the mindset that just because someone suffered before, others must be made to suffer now.

DS: Even if you cross the legal hurdles, the ones who oppose you might want to obstruct you.

SAH: No one in the world has everyone in favour of them. Despite everything, one has to move forward; everyone has to live together in a country. As we all are citizens of Bangladesh, we all will have to live together.

DS: Would you like to say something about those killed during the July movement?

SAH: No death is ever desirable; every death is painful. Every life is precious. I have said this many times before. I want a proper and impartial investigation into every incident to ensure justice. But no one should be falsely implicated.

DS: Have the bitter experiences or controversies of the last few years brought any change to your thinking?

SAH: People learn from mistakes; they keep learning. From that perspective, I am being able to learn even more new things.

Barca go seven points clear in LaLiga

Barcelona's Robert Lewandowski came off the bench to score a lucky late winner in a 2-1 victory away to 10-man Atletico Madrid on Saturday that moved the defending champions seven points clear of Real Madrid at the top of LaLiga. Barca had plenty of motivation after Real's 2-1 loss at Mallorca earlier on Saturday, but it was the hosts who took the lead six minutes before the break through Giuliano Simeone. The visitors responded with a Marcus Rashford goal three minutes later and Atletico had Nico Gonzalez sent off on the stroke of halftime. Lewandowski was in the right place to net a fortunate rebound three minutes from time.

Saints dump out Gunners in classic FA Cup upset

Southampton produced a classic FA Cup upset, knocking out Premier League leaders Arsenal with a 2-1 win in the quarterfinals at St Mary's yesterday. Ross Stewart gave the hosts a 35th-minute lead before Viktor Gyokeres equalised midway through the second half, with Mikel Arteta's side looking the likelier winners. But a late counter on 85 minutes saw Shea Charles strike to seal a memorable giant-killing. Wearing a special yellow kit to mark 50 years since their 1976 FA Cup triumph over Manchester United, Southampton advanced to the semis alongside Manchester City and Chelsea. The defeat, following their EFL Cup final loss to City, leaves Arsenal's quadruple hopes over, with only the Premier League and Champions League remaining.

66 DAYS TO GO

Asia's first quarterfinalists

In the 1966 World Cup, North Korea scripted one of the tournament's most memorable underdog stories, becoming the first Asian side to reach the quarterfinals. Their defining moment came in the group stage, where they stunned Italy with a famous 1-0 win, sending shockwaves through the tournament. In the quarters against Portugal, the fairytale soared as North Korea raced into a remarkable 3-0 lead but the dream unravelled just as quickly. Portugal mounted a stunning comeback to win 5-3, ending North Korea's historic run.

MEASLES VACCINATION Special drive in four cities from Apr 12

Emergency campaign
underway in 30 upazilas

STAFF CORRESPONDENT

The special measles vaccination campaign will be launched in four city corporations on April 12, while the drive in the remaining districts and upazilas will begin on May 3, said Health Minister Sardar Md Sakhawat Hossain.

The comment came yesterday at the inauguration of the emergency measles and rubella vaccination drive at Nababganj Upazila Health Complex.

The emergency drive kicked off in 30 upazilas across 18 districts where infection rates are relatively high, aiming to bring more than 13 lakh children aged six months to under five years under coverage.

A special vaccination campaign will be carried out in Dhaka North and South City, Barishal and Mymensingh City Corporations from April 12. From May 3, the vaccination campaign will

Bangladesh not bound by any US energy deal

Khalilur says after US envoy meets PM

STAFF CORRESPONDENT

Bangladesh has no binding obligation regarding energy imports, Foreign Minister Khalilur Rahman said yesterday, dismissing speculation about any secret agreement with the United States.

"There is no secret agreement with the United States; whatever agreements exist have already been made public," Khalilur told reporters at the Secretariat after US Ambassador to Bangladesh Brent T Christensen paid a courtesy call on Prime Minister Tarique Rahman at his Cabinet Division office at the Secretariat.

EC weighing fate of EVMs

1,599 units missing; storage costs continue to mount

AHMED DEEPTO and DIPAN NANDY

The Election Commission is weighing options for the fate of around 1.5 lakh electronic voting machines (EVMs), which are now lying idle amid rising storage costs, missing units, and growing uncertainty over their final disposal.

Election Commissioner Abdur Rahman Masud yesterday said the EC is set to take a decision based on a report from a committee formed with experts from Buet to assess the condition of the machines.

"What we're doing is determining how many EVMs are there, where they are, in what condition and whether they are usable based on expert opinion."

The expert committee will classify the machines into three categories – fully usable, partly usable, and completely unusable – and then submit a comprehensive report to the commission. "Action will be taken based on that report."

Masud added that the issue would be placed before the EC at a meeting to be chaired by CEC AMM Nasir Uddin today.

Insiders said the commission is currently under pressure to settle the future of the machines, which have remained unused. The issue, they said, has remained unresolved even after the current EC dropped plans to use EVMs in the February national election.

Speaking to The Daily Star recently, EC Secretary Akhtar Ahmed said, "These EVMs are lying around, taking up space, and have become a burden for us. Why would we get into more trouble by buying new ones? ... The decision on EVMs is that we will not use them. Full stop."

According to EC sources, among the 1.5 lakh EVMs purchased under a Tk 3,825.34 crore project, there are 148,401 in its inventory, while 1,599 cannot be traced. With each costing around Tk 2.35 lakh, the missing machines are worth about Tk 37.5 crore.

ENFORCED DISAPPEARANCE

Ordinance flawed, there will be a stronger bill

Says law minister in JS

STAFF CORRESPONDENT

The Enforced Disappearance Prevention and Redress Ordinance, 2025 will be reintroduced to the parliament as one that is "more contemporary, more welfare-oriented and more effective in ensuring justice", said Law Minister Md Asaduzzaman yesterday.

The bill will be brought later in the session after consultations with stakeholders to ensure that offenders "cannot escape accountability under any circumstances", he said while speaking on a point of order in the parliament, following protests from Jamaat MP Mir Ahmad Bin Qasem.

Ahmad expressed shock that the special parliamentary committee had recommended dropping the ordinance and not ratifying it as a bill.

Fighting back emotion, Ahmad, who himself was a victim of enforced disappearance for about eight years, said he had lived in constant fear of death throughout that time and was now dismayed that the ordinance was being allowed to lapse.

Global oil shock turning into everything crisis

Rising costs of plastic, rubber, polyester hit Asian markets

CNN ONLINE

One month into the war in Iran, a growing shortage of crude oil is threatening to morph into something worse: a shortage of nearly everything.

The conflict in the Middle East has crimped oil and natural gas flows through the Strait of Hormuz, reducing global supply by about one-fifth. The disruption has not only sent fuel prices soaring, but has squeezed supplies of petrochemicals needed to make everyday items like shoes, clothing and plastic bags.

That strain is now spreading into every corner of the consumer market as prices rise for materials like plastic, rubber and polyester. The impact is so far most evident in Asia, which accounts for more than half of the world's manufacturing and is heavily reliant on imports for oil and other commodities.

In South Korea, where people have been panic-buying trash bags, the government has encouraged event organizers to minimize use of disposable items. Taiwan has started a hotline for manufacturers that have run out of plastic, and its rice farmers told local media they may hike prices because they can't get vacuum-sealed bags.

In Japan, the oil crisis has sparked fears that patients with chronic kidney failure won't be able to get treatment due to a lack of plastic medical tubes used in hemodialysis. Malaysian glove manufacturers say a dearth of a petroleum byproduct needed to make

rubber latex is threatening global supplies of medical gloves.

"This spills into everything very, very quickly: beer, noodles, chips, toys, cosmetics," said Dan Martin, co-head of business intelligence at Dezan Shira & Associates, an advisory firm that helps international businesses expand in Asia.

That's because plastic caps, crates, snack bags and containers are becoming more difficult to procure. Petroleum derivatives are also needed to make adhesives for footwear and furniture, industrial lubricants for machinery and solvents for paints and cleaning processes, Martin added.

"It's very fast transmission from oil and shipping disruption into petrochemicals and consumer goods," he said.

Govt to act on pay scale after review by committee

STAFF CORRESPONDENT

The government will take the next steps on implementing the new pay structure for its employees based on the recommendations of a review committee, Prof Rashed Al Mahmud Titumir, PM's finance and planning adviser, said yesterday.

The adviser made the remarks while speaking to reporters at the finance ministry after a meeting between Prime Minister Tarique Rahman and Finance and Planning Minister Amir Khosru Mahmud Chowdhury.

The finance minister met the PM to seek direction on implementing the pay commission's recommendations, according to finance ministry officials.

Besides Titumir, Cabinet Secretary Nasimul Ghani and Finance Secretary Md Khairuzzaman Mozumder were present at the meeting.

The interim government formed a 23-member pay commission, led by former finance secretary Zakir

House ratifies ordinances on govt job age, conduct

STAFF CORRESPONDENT

Parliament yesterday passed two bills ratifying two ordinances – one determining a maximum age limit of 32 years for entry into government service and the other introducing special provisions concerning the conduct and penalties of government employees.

State Minister for Public Administration Abdul Bari placed the bills: the Government Service (Amendment) Bill and the Bill to Fix the Maximum Age Limit for Direct Recruitment in Government and Autonomous, Statutory Authorities, Public Non-Financial Corporations, and Self-Governed Institutions.

Both were passed by voice vote without discussion, as no amendment proposals were raised.

It took about eight minutes for the bills to be passed. During the voice vote, opposition members were not heard saying either "yes" or "no".

The Jatiya Sangsad began passing bills to ratify ordinances from yesterday.

Regarding the two bills, the parliamentary special committee tasked with scrutinising 133 ordinances issued by the interim government recommended that the ordinances be approved exactly as they are. With the passage of the bills, four ordinances have now been ratified.

Through the supplementary agenda, members of parliament were informed about the introduction of the two bills. Standing on a point of order, Opposition Leader Shafiqul Rahman said some bills had been brought under the supplementary agenda.

KERANIGANJ FIRE Factory was sealed-off after a previous fire

STAFF CORRESPONDENT

The gas lighter manufacturing factory in Keraniganj, where a devastating fire killed at least six people on Saturday, had been operating illegally, police said.

Mohammad Mossaraf Hossain, inspector (investigation) of Keraniganj Police Station, told The Daily Star that the factory was sealed off after catching fire about one and a half years ago.

However, the owners later resumed operations, allegedly with the support of a local influential – Md Iman Ullah, 50.

Police arrested Iman in connection with Saturday's incident. A 10 day remand has been sought, and a hearing on the petition is scheduled for today.

Sub-Inspector Jewel Rana filed a case with South Keraniganj Police Station, accusing factory
